

UiPath-ABAAv1최고품질시험덤프자료시험준비에가장 좋은기출문제모은덤프자료

2026 Itexamdump 최신 UiPath-ABAAv1 PDF 버전 시험 문제집과 UiPath-ABAAv1 시험 문제 및 답변 무료 공유:
<https://drive.google.com/open?id=1noGzoSO0YplJBXAE4qcFs0SwEW52mTub>

UiPath인증 UiPath-ABAAv1 시험을 패스하여 자격증을 취득하는게 꿈이랴구요? Itexamdump에서 고객님의UiPath인증 UiPath-ABAAv1 시험패스꿈을 이루어지게 지켜드립니다. Itexamdump의 UiPath인증 UiPath-ABAAv1 덤프는 가장 최신 시험에 대비하여 만들어진 공부자료로서 시험패스는 한방에 끝내줍니다.

Itexamdump는 유일하게 여러분이 원하는UiPath인증UiPath-ABAAv1 시험관련자료를 해결해드릴 수 있는 사이트입니다. 여러분이 다른 사이트에서도 관련덤프자료를 보셨을경우 페이지 아래를 보면 자료출처는 당연히 Itexamdump 일 것입니다. Itexamdump의 자료만의 제일 전면적이고 또 최신 업데이트일 것입니다.

>> UiPath-ABAAv1최고품질 시험덤프자료 <<

최신버전 UiPath-ABAAv1최고품질 시험덤프자료 덤프데모문제 다운

Itexamdump 는 여러분의 IT전문가의 꿈을 이루어 드리는 사이트 입니다. Itexamdump는 여러분이 우리 자료로 관심 가는 인증시험에 응시하여 안전하게 자격증을 취득할 수 있도록 도와드립니다. 아직도UiPath 인증UiPath-ABAAv1 인증시험으로 고민하시고 계십니까? UiPath 인증UiPath-ABAAv1 인증시험 가이드를 사용하실 생각은 없나요? Itexamdump는 여러분께 시험패스의 편리를 드릴 수 있습니다.

최신 UiPath Automation Business Analyst Associate UiPath-ABAAv1 무료 샘플문제 (Q63-Q68):

질문 # 63

Which of the following best describes a benefit of having a structured automation implementation methodology?

- A. Reduces dependency on documentation
- B. Increases manual intervention in processes
- C. Ensures consistent quality and faster implementations
- D. Allows skipping of UAT phase

정답: C

설명:

Having a structured automation implementation methodology, like UiPath's, ensures consistent quality, faster and more reliable implementations, and smoother handoffs between teams. By following a defined sequence of stages - from Kickoff to Project Closure - teams can operate with clarity and efficiency.

This methodology reduces ambiguity, improves collaboration between business and technical teams, and provides a framework for issue escalation and risk management. It also ensures that each process is thoroughly analyzed, designed, built, and validated before moving to production.

Without such structure, projects may suffer from misalignment, unclear responsibilities, delays, or quality issues. A strong methodology acts as a roadmap for delivering automation in a scalable, repeatable, and maintainable way.

질문 # 64

Which of the following best describes how automation software robots operate?

- A. They physically interact with machines to perform tasks.
- **B. They mimic human actions to interact with digital systems and applications.**
- C. They require constant human supervision.
- D. They write code autonomously.

정답: B

설명:

Automation software robots, particularly those built using UiPath, operate by mimicking human actions to interact with digital systems and applications. This includes actions such as clicking buttons, typing into fields, reading data from screens, extracting information from documents, navigating applications, and triggering system events. Their behavior is defined through automation workflows created by developers using tools like UiPath Studio.

These robots do not require constant supervision; unattended robots operate autonomously, while attended robots are triggered by users. They also do not interact physically with machines. Instead, they work entirely within virtual environments, desktops, and applications.

By replicating human behavior in digital workflows, robots can perform repetitive, rule-based tasks consistently, quickly, and without fatigue. This enables organizations to improve operational efficiency, reduce human error, increase accuracy, and free employees to focus on more strategic work.

Software robots do not write code on their own—developers design their workflows. However, with AI enhancements, they can assist in automation development. Still, their core functionality relies on executing predefined instructions that simulate human interaction with digital systems.

질문 # 65

What is the key responsibility of the Client Team Project Manager?

- A. Writing automation code in UiPath Studio
- B. Overseeing infrastructure installation and configuration
- **C. Managing internal client-side processes and escalations**
- D. Creating the Solution Design Document

정답: C

설명:

The Client Team Project Manager is responsible for managing internal client-side processes and handling escalations during the implementation lifecycle. This role acts as the client's primary liaison with the Implementation Team and ensures that internal dependencies and commitments are met.

Responsibilities include:

- * Coordinating Subject Matter Experts (SMEs) and business stakeholders
- * Communicating internal timelines and availability
- * Facilitating approval processes for documents and deliverables
- * Escalating and resolving client-side roadblocks
- * Ensuring that the client team is aligned with project expectations

Their involvement ensures that the implementation proceeds without delays caused by unavailability, access issues, or lack of communication from the client side.

질문 # 66

In UiPath Automation Hub, how is the "Ease of Implementation" score calculated?

- A. By assessing the duration of the process cycle
- B. By the number of process steps
- **C. By assessing the complexity and resource requirements of implementing the automation**

- D. By looking at systems involved in the process and their compatibility with RPA

정답: C

설명:

In UiPath Automation Hub, the Ease of Implementation score is calculated by assessing the complexity and resource requirements needed to automate a process. This scoring evaluates how difficult or simple it will be for the Implementation Team to build and deploy automation for the selected process.

Factors that influence the score typically include the number of applications involved, the applications' automation-friendliness, exception variability, data structures, system reliability, dependencies, and required human interactions. It may also consider technical challenges such as OCR requirements, API availability, multi-system integrations, or unusual business rules.

A lower complexity with fewer resource dependencies results in a higher Ease of Implementation score, indicating the process is more suitable for rapid automation. Conversely, complex processes with numerous exceptions, unstructured data, or unstable systems may result in a lower score.

This scoring helps organizations prioritize automation opportunities by balancing potential value against implementation effort. It ensures that teams select automation candidates that deliver value quickly while maintaining reasonable development effort and resource allocation.

질문 # 67

Which of the following best describes the Automation Business Analyst's role during the Process Analysis stage?

- A. Approves solution architecture
- B. Defines coding best practices
- C. Handles infrastructure provisioning
- D. Analyzes the As-Is process and defines the To-Be process

정답: D

설명:

During the Process Analysis stage, the Automation Business Analyst is responsible for analyzing the current (As-Is) process and defining the future (To-Be) process to be automated. This includes mapping out each step, understanding business rules, identifying inefficiencies, and collaborating with stakeholders to envision how automation will change the process.

The Business Analyst also works closely with the Solution Architect to prepare the Process Definition Document (PDD) and ensures that the process is well-documented for the developers to understand and automate.

This role is essential for bridging the gap between business users and technical implementers, ensuring that the solution reflects the true needs of the business while being technically feasible.

질문 # 68
