

JN0-224 Exam Tutorial - Valid JN0-224 Torrent

Juniper JN0-224 learning materials are new but increasingly popular choices these days which incorporate the newest information and the most professional knowledge of the practice exam. All points of questions required are compiled into our Automation and DevOps, Associate (JNCIA-DevOps) JN0-224 Preparation quiz by experts. By the way, the JN0-224 certificate is of great importance for your future and education.

Juniper JN0-224 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Rest API: This domain covers Junos REST API implementation, REST API Explorer tool, and cURL usage for HTTP-based device management and configuration.
Topic 2	<ul style="list-style-type: none">• Junos Automation Stack and DevOps Concepts: This domain covers fundamental automation tools, frameworks, APIs, and DevOps culture applicable to Junos platform operations and network management.
Topic 3	<ul style="list-style-type: none">• NETCONF• XML API: This domain focuses on XML syntax, XPath expressions, NETCONF protocol, and XML API functionality for programmatic device configuration and communication.
Topic 4	<ul style="list-style-type: none">• Data Serialization: This domain addresses YAML and JSON formats used for structured data representation and exchange in network automation workflows.
Topic 5	<ul style="list-style-type: none">• Python• PyEZ: This domain examines Python programming with PyEZ library for Junos automation, including JSNAPy, Jinja2 templates, RPC calls, exception handling, and device configuration management.

Valid JN0-224 Torrent & JN0-224 Testking

In actuality, the test center around the material is organized flawlessly for self-review considering the way that the competitors who are working in Juniper working conditions don't get the sufficient opportunity to go to classes for Automation and DevOps, Associate (JNCIA-DevOps) certification. Thusly, they need to go for self-study and get the right test material to fire scrutinizing up for the Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) exam. By utilizing Juniper JN0-224 dumps, they shouldn't stress over any additional assistance with that.

Juniper Automation and DevOps, Associate (JNCIA-DevOps) Sample Questions (Q42-Q47):

NEW QUESTION # 42

Given the following Python script:

```
a = [1,2,3,4,5,6,7,8,9]
```

```
print(a[0])
```

What is the output of this print command?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

In Python, lists are zero-indexed, meaning the first element of the list is at index 0. The given script is:

```
pythona = [1, 2, 3, 4, 5, 6, 7, 8, 9]
```

```
print(a[0])
```

a[0] refers to the first element in the list a, which is 1.

So, the output of the print(a[0]) command is 1.

Option A is correct because Python indexing starts at 0, making the first element of the list at index 0.

Reference:

Python Official Documentation: Covers list indexing and operations.

Python Programming Tutorials: Provide examples of list indexing.

NEW QUESTION # 43

Exhibit.

```
<rpc-reply xmlns:junos="http://xml.juniper.net/junos/20.1R0/junos">
  <configuration junos:commit-seconds="1589295982" junos:commit-localtime="2020-05-12 15:06:22
UTC" junos:commit-user="user">
    <interfaces>
      <interface>
        <name>ge-0/0/1</name>
        <unit>
          <name>0</name>
          <family>
            <inet>
              <address>
                <name>192.168.10.1/24</name>
              </address>
            </inet>
          </family>
        </unit>
      </interface>
      <interface>
        <name>fxp0</name>
        <unit>
          <name>0</name>
          <family>
            <inet>
              <address>
                <name>172.25.11.1/24</name>
              </address>
            </inet>
          </family>
        </unit>
      </interface>
    </interfaces>
  </configuration>
</rpc-reply>
```

Referring to the exhibit, which XML XPath expression will only show the IP address XML elements?

- A. //name
- B. /address/name
- C. //address/name
- D. /name

Answer: C

Explanation:

NEW QUESTION # 44

Junos PyEZ tables are formatted using which file type?

- A. IXML
- B. SON
- C. **YAML**
- D. txt

Answer: C

Explanation:

Junos PyEZ uses YAML (YAML Ain't Markup Language) files to define the format for tables and views when working with operational and configuration data. YAML is a human-readable data format that is commonly used for configuration files, making it suitable for defining data structures in PyEZ.

Option B (YAML) is correct because PyEZ tables are defined using YAML files.

Options A (JSON), C (txt), and D (IXML) are incorrect in this context, as YAML is the standard format used.

Supporting Reference:

Junos PyEZ Tables Documentation: Explains the use of YAML files for formatting tables and views in Junos PyEZ.

NEW QUESTION # 45

Which statement about the NETCONF content layer is true?

- A. It uses HTML for RPC request and response payloads.
- B. It uses JSON for RPC request and response payloads.
- C. It uses YAML for RPC request and response payloads.
- D. **It uses XML for RPC request and response payloads.**

Answer: D

Explanation:

The NETCONF protocol, used for network management, utilizes XML for encoding the RPC (Remote Procedure Call) requests and responses. XML is chosen because of its flexibility and ability to represent hierarchical data structures, making it well-suited for representing network configurations and states.

Option B is correct because XML is the standard format used for NETCONF RPC payloads.

Options A (YAML), C (JSON), and D (HTML) are incorrect because these formats are not used by NETCONF for its RPC payloads.

Supporting Reference:

RFC 6241 - NETCONF Protocol: This RFC describes the use of XML for encoding NETCONF messages.

NEW QUESTION # 46

What is the difference between a list and a tuple in Python?

- A. **Lists are mutable objects that use square brackets, and tuples are immutable objects that use parentheses.**
- B. Lists are immutable objects that use parentheses, and tuples are immutable objects that use square brackets.
- C. Lists are mutable objects that use parentheses, and tuples are immutable objects that use square brackets.
- D. Lists are immutable objects that use square brackets, and tuples are mutable objects that use parentheses.

Answer: A

Explanation:

In Python, the distinction between lists and tuples is essential for efficient programming:

Lists:

Mutable (B): This means that once a list is created, its elements can be changed, added, or removed. Lists are versatile and commonly used when the data is expected to change.

Square Brackets: Lists are defined using square brackets [].

Example:

```
my_list = [1, 2, 3]
my_list[0] = 10 # Modifying the first element
```

Tuples:

Immutable (B): Once a tuple is created, it cannot be altered. Tuples are used when a fixed collection of items is needed, providing more integrity to the data.

Parentheses: Tuples are defined using parentheses ().

Example:

```
my_tuple = (1, 2, 3)
```

```
# my_tuple[0] = 10 # This would raise an error because tuples are immutable Reference:
```

Python Official Documentation: The Python Language Reference provides detailed information on data types like lists and tuples, including their mutability and syntax.

Automation Scripts: In the context of automation, understanding when to use mutable or immutable data structures can significantly impact script performance and reliability.

NEW QUESTION # 47

.....

One of the main unique qualities of the CertkingdomPDF Google Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use Juniper PDF dumps and Web-based software without installation. Automation and DevOps, Associate (JNCIA-DevOps) (JN0-224) PDF questions work on all the devices like smartphones, Macs, tablets, Windows, etc. We know that it is hard to stay and study for the Juniper JN0-224 exam dumps in one place for a long time.
