As we all know, a good Professional-Cloud-DevOps-Engineer Exam Torrent can win the support and fond of the customers, Professional-Cloud-DevOps-Engineer exam dumps of are just the product like this. With high pass rate and high quality, we have received good reputation in different countries in the world. We are a professional enterprise in this field, with rich experience and professional spirits, we have help many candidates pass the exam. What's more, the free update is also provided.

Google Professional-Cloud-DevOps-Engineer Certification Exam is an industry-recognized credential that validates the skills and knowledge of professionals in the field of DevOps. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification demonstrates that candidates have the ability to design and implement robust and scalable DevOps solutions using Google Cloud technologies. Google Cloud Certified - Professional Cloud DevOps Engineer Exam certification exam covers a broad range of topics including continuous integration and delivery, infrastructure as code, monitoring and logging, and automation of various DevOps processes.

Free PDF Quiz 2026 Google Professional-Cloud-DevOps-Engineer: Latest Google Cloud Certified - Professional Cloud DevOps Engineer Exam Test Free

Only 20-30 hours on our Professional-Cloud-DevOps-Engineer learning guide are needed for the client to prepare for the test and it saves our client's time and energy. Most people may wish to use the shortest time to prepare for the test and then pass the test with our Professional-Cloud-DevOps-Engineer study materials successfully because they have to spend their most time and energy on their jobs, learning, family lives and other important things. Our Professional-Cloud-DevOps-Engineer Study Materials can satisfy their wishes and they only spare little time to prepare for exam.

Google Cloud Certified - Professional Cloud DevOps Engineer Exam Sample Questions (Q81-Q86):

NEW QUESTION # 81

You are designing a system with three different environments: development, quality assurance (QA), and production. Each environment will be deployed with Terraform and has a Google Kubernetes Engine (GKE) cluster created so that application teams can deploy their applications. Anthos Config Management will be used and templated to deploy infrastructure level resources in each GKE cluster. All users (for example, infrastructure operators and application owners) will use GitOps. How should you structure your source control repositories for both Infrastructure as Code (IaC) and application code?

- A. Cloud Infrastructure (Terraform) repository is shared: different branches are different environmentsGKE Infrastructure (Anthos Config Management Kustomize manifests) repository is shared: differentoverlay directories are different environmentsApplication (app source code) repository is shared: different directories are different features
- B. Cloud Infrastructure (Terraform) repository is shared: different directories are different environmentsGKE Infrastructure (Anthos Config Management Kustomize manifests) repository is shared: differentoverlay directories are different environmentsApplication (app source code) repositories are separated: different branches are different features
- C. Cloud Infrastructure (Terraform) repositories are separated: different branches are different environmentsGKE Infrastructure (Anthos Config Management Kustomize manifests) repositories are separated:different overlay directories are different environmentsApplication (app source code) repositories are separated: different branches are different features
- D. Cloud Infrastructure (Terraform) repository is shared: different directories are different environmentsGKE Infrastructure

(Anthos Config Management Kustomize manifests) repositories are separated: different branches are different environments
Application (app source code) repositories are separated: different branches are different features

Answer: D

NEW QUESTION # 82

Your organization wants to collect system logs that will be used to generate dashboards in Cloud Operations for their Google Cloud project. You need to configure all current and future Compute Engine instances to collect the system logs and you must ensure that the Ops Agent remains up to date. What should you do?

- A. Install the Ops Agent on the Compute Engine image by using a startup script
- **B. Use the gcloud CLI to create an Agent Policy.**
- C. Use the gcloud CLI to install the Ops Agent on each VM listed in the Cloud Asset Inventory
- D. Select all VMs with an Agent status of Not detected on the Cloud Operations VMs dashboard Then select Install agents

Answer: B

NEW QUESTION # 83

You are the Site Reliability Engineer responsible for managing your company's data services and products.

You regularly navigate operational challenges, such as unpredictable data volume and high cost, with your company's data ingestion processes. You recently learned that a new data ingestion product will be developed in Google Cloud. You need to collaborate with the product development team to provide operational input on the new product. What should you do?

- A. When the new product is used by at least one internal customer in production, share error logs and monitoring metrics with the product development team.
- B. When the initial product version passes the quality assurance phase and compliance assessments, deploy the product to a staging environment. Share error logs and performance metrics with the product development team.
- **C. Review the design of the product with the product development team to provide feedback early in the design phase.**
- D. Deploy the prototype product in a test environment, run a load test, and share the results with the product development team.

Answer: C

Explanation:

The correct answer is D. Review the design of the product with the product development team to provide feedback early in the design phase.

According to the Google Cloud DevOps best practices, a Site Reliability Engineer (SRE) should collaborate with the product development team from the beginning of the product lifecycle, not just after the product is deployed or tested. This way, the SRE can provide operational input on the product design, such as scalability, reliability, security, and cost efficiency. The SRE can also help define service level objectives (SLOs) and service level indicators (SLIs) for the product, as well as monitoring and alerting strategies. By collaborating early and often, the SRE and the product development team can ensure that the product meets the operational requirements and expectations of the customers.

NEW QUESTION # 84

You need to run a business-critical workload on a fixed set of Compute Engine instances for several months. The workload is stable with the exact amount of resources allocated to it. You want to lower the costs for this workload without any performance implications. What should you do?

- A. Purchase Committed Use Discounts.
- **B. Create an Unmanaged Instance Group for the instances used to run the workload.**
- C. Convert the instances to preemptible virtual machines.
- D. Migrate the instances to a Managed Instance Group.

Answer: B

NEW QUESTION # 85

You support a service with a well-defined Service Level Objective (SLO). Over the previous 6 months, your service has consistently met its SLO and customer satisfaction has been consistently high. Most of your service's operations tasks are automated and few repetitive tasks occur frequently. You want to optimize the balance between reliability and deployment velocity while following site reliability engineering best practices. What should you do? (Choose two.)

- A. Shift engineering time to other services that need more reliability.
- B. Change the implementation of your Service Level Indicators (SLIs) to increase coverage.
- C. Make the service's SLO more strict.
- D. Increase the service's deployment velocity and/or risk.
- E. Get the product team to prioritize reliability work over new features.

Answer: A,D
