

# Online HPE6-A86 Tests, HPE6-A86 Valid Exam Simulator

BTW, DOWNLOAD part of Pass4Test HPE6-A86 dumps from Cloud Storage: <https://drive.google.com/open?id=1LNUVOn8dpvf0sSg85449-edMYBPBoGk>

The HPE6-A86 certification is the best proof of your ability. However, it's not easy for those work officers who has less free time to prepare such an HPE6-A86 exam, and people always feel fear of the unknown thing and cannot handle themselves with a sudden change. However, our HPE6-A86 Exam Questions can stand by your side. And we are determined to devote ourselves to serving you with the superior HPE6-A86 study materials. You can have a try on the free demo of our HPE6-A86 exam questions, you can understand in detail and make a choice.

“There is no royal road to learning.” Learning in the eyes of most people is a difficult thing. People are often not motivated and but have a fear of learning. However, the arrival of HPE6-A86 exam materials will make you no longer afraid of learning. Our professional experts have simplified the content of our HPE6-A86 Study Guide and it is easy to be understood by all of our customers all over the world. Just try our HPE6-A86 learning braindumps, and you will be satisfied.

## HPE6-A86 HPE Network Switching Associate Exam For Guaranteed Success

The successful outcomes are appreciable after you getting our HPE6-A86 exam prep. After buying our HPE6-A86 latest material, the change of gaining success will be over 98 percent. Many exam candidates ascribe their success to our HPE6-A86 real questions and become our regular customers eventually. Rather than blindly assiduous hardworking for amassing knowledge of computer, you can achieve success skillfully. They are masterpieces of experts who are willing to offer the most effective and accurate HPE6-A86 Latest Material for you.

### HPE Network Switching Associate Exam Sample Questions (Q70-Q75):

#### NEW QUESTION # 70

A Network Operator is working on a converged network that carries voice, video, and data traffic.

Users are complaining about poor quality on their VoIP calls, such as jitter and dropped words, especially when large file transfers are happening on the network. What is the primary role of Quality of Service (QoS) in resolving this issue?

- A. To increase the total bandwidth of the network connection.
- B. To block the file transfer traffic whenever a voice call is active.
- **C. To manage network resources and prioritize the delay-sensitive voice traffic over the less sensitive file transfer traffic.**
- D. To encrypt the voice traffic to protect it from the data traffic.

**Answer: C**

#### NEW QUESTION # 71

What is the default behavior of a trunked port on an HPE Aruba Networking CX switch?

- A. By default, all VLAN traffic is tagged to traverse a trunk link.
- B. By default, all VLAN traffic is tagged to traverse a trunk link when the port is part of a LAG.
- C. By default, all VLAN traffic is tagged to traverse a trunk link when the port type is routed.
- **D. By default, all VLAN traffic is tagged to traverse a trunk link except the native VLAN.**

**Answer: D**

Explanation:

The correct answer is D. By default, all VLAN traffic is tagged to traverse a trunk link except the native VLAN. In HPE Aruba Networking AOS-CX, a trunk interface can carry traffic for multiple VLANs, and VLAN tagging is used to identify traffic from different VLANs across the trunk. However, the native VLAN is the exception. HPE Aruba Networking documentation explains that the native VLAN is the VLAN to which incoming untagged traffic is assigned, and by default VLAN 1 is assigned as the native VLAN for trunk interfaces. This means normal trunk behavior is that VLAN traffic is tagged, while native VLAN traffic can be untagged unless configured otherwise. Option A is incomplete because it ignores native VLAN behavior. Option B is incorrect because the native VLAN concept applies to trunk interfaces generally, not only when a port is part of a LAG. Option C is incorrect because VLAN trunking applies to Layer 2 interfaces, not routed ports. Therefore, the default trunk behavior is tagged VLAN traffic except for the native VLAN.

### NEW QUESTION # 72

A Network Administrator is troubleshooting an intermittent connectivity issue between two subnets, VLAN 20 and VLAN 30. They suspect a routing loop or a duplicate IP address might be the cause. The administrator wants to trace the Layer 3 path from the default gateway of VLAN

20 (SW-1) to a host in VLAN 30.

Which troubleshooting steps are most effective for diagnosing this issue? (Choose 2.)

- A. Use ``show arp | include <vlan30_host_ip>`` on SW-1 to check for a valid ARP entry.
- **B. Use ``ping <vlan30_host_ip> repeat 100`` on SW-1 to confirm the intermittent nature of the problem**
- C. Use ``show mac-address-table`` on SW-1 to find the IP address of the host.
- D. Use ``show spanning-tree`` on SW-1 to check the Layer 3 routing topology.
- **E. Use ``traceroute <vlan30_host_ip>`` on SW-1 to identify the routing path and any potential loops.**

**Answer: B,E**

### NEW QUESTION # 73

What is a characteristic of Static Link Aggregation Group?

- **A. The aggregation of links is manually configured by network administrators.**
- B. It dynamically negotiates and manages the formation of LAGs.
- C. It utilizes protocols like LACP for automatic link aggregation.
- D. Static LAGs provide automatic failover and load-balancing capabilities.

**Answer: A**

### NEW QUESTION # 74

At which layer of the OSI model does data segmentation occur?

- A. Application Layer
- B. Network Layer
- **C. Transport Layer**
- D. Data Link Layer

**Answer: C**

Explanation:

The correct answer is B. Transport Layer. Data segmentation is a Transport Layer function. At Layer 4, protocols such as TCP divide application data into smaller pieces called segments so that data can be transported between endpoints. The Transport Layer

also uses TCP and UDP port numbers to identify application conversations between hosts. HPE Aruba Networking AOS-CX ACL documentation references TCP/UDP ports as Layer 4 ports, which aligns transport-layer port usage with the Transport Layer. The Application Layer provides user-facing application services, but it does not perform transport segmentation. The Network Layer handles logical IP addressing and routing. The Data Link Layer handles Ethernet framing, MAC addressing, and local delivery on a network segment. Therefore, when the question asks where data segmentation occurs in the OSI model, the correct answer is the Transport Layer. ( arubanetworking.hpe.com )

## NEW QUESTION # 75

.....

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional HPE6-A86 Certification to pave the way for a better future. Considered many of the candidates are too busy to review, our experts designed the HPE6-A86 question dumps in accord with actual examination questions, which would help you pass the exam with high proficiency.
