Latest Mule-Dev-202 Exam Materials: Salesforce Certified MuleSoft Hyperautomation Developer give you the most helpful Training Dumps

Passing a exam for most candidates may be not very easy, our Mule-Dev-202 Exam Materials are trying to make the make the difficult things become easier. With the experienced experts, our Mule-Dev-202 exam dump, and the professionals to check timely, the versions update is quietly fast. Thinking that if you got the certificate, you can get a higher salary, and you're your position in the company will also in a higher level.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q48-Q53):

NEW QUESTION # 48

Northern Trail Outfitters is building a hyperautomation solution using Salesforce and MuleSoft. They need to use Salesforce Flow to automate a multi-departmental process in an external system and capture the outcome in Salesforce.

How should the Salesforce Flow solution be structured to meet this requirement?

- A. Parent and subflows invoked by REST API to capture user inputs and update Salesforce records
- B. An evaluation flow which evaluates when the process is completed and updates Salesforce records
- C. An autolaunched flow invoked by REST API to update Salesforce after the process is completed

- **D. A Flow Orchestration to automate the multi-departmental process and update Salesforce records**

Answer: D

Explanation:

Salesforce Flow Orchestration is designed to manage complex, multi-step business processes that span multiple departments and systems. Here's how it can be structured to meet the requirement:

Automate Multi-Departmental Process:

Use Flow Orchestration to define and manage the steps involved in the multi-departmental process. It allows you to break down the process into stages and define the sequence of actions and approvals required.

Capture Outcome in Salesforce:

After completing the external process, Flow Orchestration can be configured to update Salesforce records with the outcome. This ensures that the results of the automated process are reflected within Salesforce.

Orchestration Capabilities:

Salesforce Flow Orchestration provides features such as task assignments, decision elements, and complex branching logic, which are ideal for managing multi-departmental workflows.

NEW QUESTION # 49

AnyAirlines selected AWS Cloud services as their infrastructure platform. They need to implement Anypoint Platform as the integration solution along with existing cloud capabilities like vertical/horizontal scalability and zero downtime redeployments. Which type of deployment strategy is needed?

- A. Private Cloud Edition
- B. Hybrid
- C. Cloudhub
- **D. Runtime Fabric**

Answer: D

Explanation:

Anypoint Runtime Fabric: Anypoint Runtime Fabric (RTF) is designed for deploying Mule applications on any cloud infrastructure, including AWS. It supports vertical and horizontal scalability and enables zero-downtime deployments, which aligns with AnyAirlines' requirements.

Reference: Anypoint Runtime Fabric Overview

Vertical/Horizontal Scalability: RTF allows scaling applications both vertically (adding more resources to existing nodes) and horizontally (adding more nodes to the cluster). This ensures high availability and performance.

Reference: Runtime Fabric Scalability

Zero Downtime Deployments: RTF supports zero-downtime deployments by utilizing rolling updates and canary deployments, ensuring that updates do not disrupt ongoing operations.

Reference: Zero Downtime Deployment with RTF

AWS Integration: RTF can be deployed on AWS, leveraging existing cloud infrastructure capabilities and providing a seamless integration experience.

Reference: Deploying RTF on AWS

NEW QUESTION # 50

Which type of integration project should be implemented with MuleSoft Composer?

- A. Long running workflows that require manual steps and approvals by users
- B. Automating UI interactions using image recognition
- **C. Data transformation from a source system to a target system by a non-technical user**
- D. Batch processing of larger-than-memory files with conditional logic within the batch steps

Answer: C

Explanation:

MuleSoft Composer is designed for business users to create integrations without deep technical knowledge. It is ideal for scenarios that involve:

Data Transformation and Integration:

Non-technical users can easily connect different systems, automate data transfers, and transform data from one system to another using a no-code interface.

MuleSoft Composer provides pre-built connectors and an intuitive interface to set up these integrations.

Simplified Automation:

The platform is optimized for creating straightforward, rule-based automations where complex coding is not required.

Therefore, automating data transformation tasks by a non-technical user fits perfectly with MuleSoft Composer's capabilities.

NEW QUESTION # 51

The MuleSoft development team at Northern Trail Outfitters creates a Mule application that interacts with several APIs and RPA processes. The team needs to share this application with other teams to help them create similar applications.

How should the Mule application be published in Anypoint Exchange to meet this requirement?

- A. API asset
- B. Custom asset
- C. Connector asset
- **D. Template asset**

Answer: D

Explanation:

To share a Mule application that interacts with several APIs and RPA processes with other teams for creating similar applications, publishing it as a Template asset is the best approach:

Template Asset:

A Template in Anypoint Exchange is designed to provide a reusable solution that can be easily adapted for different use cases. It includes predefined integration logic and configurations that can be used as a starting point for new projects.

By publishing the Mule application as a Template, other teams can leverage this pre-built solution, customize it to their specific needs, and ensure consistency in integration practices across the organization.

NEW QUESTION # 52

Any Airlines is developing a new integration and wants built-in automated testing.

Which tool must be used to satisfy this requirement?

- A. MuleSoft Composer
- **B. Anypoint Platform**
- C. Flow Orchestration
- D. MuleSoft RPA

Answer: B

Explanation:

To implement built-in automated testing for new integrations at Any Airlines, the Anypoint Platform is the appropriate tool.

Anypoint Platform Capabilities:

Automated Testing: Anypoint Platform includes various tools such as MUnit for automated testing of Mule applications. MUnit allows developers to create, design, and run tests natively within Anypoint Studio.

Test Automation Features: It supports comprehensive testing features including unit tests, integration tests, and mock services to ensure robust and reliable integrations.

Continuous Integration and Deployment: Anypoint Platform can be integrated with CI/CD pipelines, allowing automated tests to run as part of the deployment process, ensuring that any new code changes do not break existing functionality.

Why Not Other Options:

MuleSoft RPA: Primarily used for automating repetitive manual tasks, not for testing integrations.

MuleSoft Composer: Focuses on low-code integrations and automation, not specifically designed for automated testing.

Flow Orchestration: While useful for process automation within Salesforce, it does not provide the testing capabilities required for MuleSoft integrations.

References:

For detailed information on automated testing with Anypoint Platform and MUnit, refer to the official MuleSoft documentation
