Answer:

Explanation:

□ Explanation:

□

NEW QUESTION # 725

Drag and drop the WLAN components from the left onto the correct descriptions on the right.

□

Answer:

Explanation:

□

NEW QUESTION # 726

Which components are contained within a virtual machine?

- A. physical resources, including the NIC, RAM, disk, and CPU
- **B. configuration files backed by physical resources from the Hypervisor**
- C. processes running on the Hypervisor and a guest OS
- D. applications running on the Hypervisor

Answer: B

Explanation:

A virtual machine is a software-based computer that runs on a physical host computer or a remote server. It has its own operating system, applications, and virtual hardware devices that are configured by the user. The virtual hardware devices are backed by the physical resources of the Hypervisor, which is a software layer that manages the virtual machines and allocates the CPU, memory, network, and storage resources to them. The configuration files of a virtual machine contain information such as the name, UUID, BIOS settings, hardware settings, and resource settings of the virtual machine. These files are stored on a datastore, which is a logical container for files and virtual disks¹².
