## PEGACPSSA23V1測試題庫 & PEGACPSSA23V1考題資源

PDFExamDumps 的 PEGACPSSA23V1 擬真試題覆蓋了真實的 Pegasystems 考試指南，並根據其編定適合全球考生都能通用的題庫，讓每一位考生都能順利通過考試。IT人員想要在業內有所成就，選對IT認證是關鍵，雖然獲取認證需要投入額外的時間與金錢，但事實證明IT認證的投入產出是值得的，對於未來的職業發展非常有利。據業內人士介紹，PEGACPSSA23V1 公司推出的 Pegasystems 考題發生了變化，請各位 Pegasystems 的 PEGACPSSA23V1 考生注意一下，不過也不必太著急。

## 最新的 Certified Senior System Architect PEGACPSSA23V1 免費考試真題 (Q59-Q64):

### 問題 #59

In the following example, the HomeIns, HomeInsInt, and Customer rulesets are configured for application validation. MyCo and MyCoInt are configured for ruleset validation. MyCo lists MyCoInt and Customer as its prerequisites, and the prerequisite for MyCoInt is Pega-ProcessCommander.

Which of the following statements is correct?

□

- A. Rules in MyCoInt can reference rules in Customer.
- B. Rules in Customer can reference rules in HomeIns.
- C. Rules in MyCo can reference rules in HomeInsInt.
- **D. Rules in MyCo can reference rules in HomeIns.**

答案: D

解題說明:

In Pega's ruleset hierarchy, a ruleset can reference rules in its own ruleset as well as in any prerequisites (and their prerequisites, recursively). Since MyCo lists MyCoInt and Customer as its prerequisites and MyCoInt, in turn, lists Pega-ProcessCommander (which is not relevant here), MyCo can reference rules in both HomeIns and HomeInsInt. However, since only HomeIns is explicitly mentioned in the options, the correct answer is that MyCo can reference rules in HomeIns. Reference: Pega SSA course materials on ruleset hierarchy and ruleset validation.

### 問題 #60

A courier company wants a mobile app to scan and track the parcels collected from remote areas with no internet access. Which mobile app do you develop to fulfill the requirement?

- A. Unsigned app
- B. Native app

- C. Signed app
- D. SDK app

答案： C

解題說明：

For a courier company requiring a mobile app to work in remote areas without internet access, a signed app is the best solution. Signed apps are authorized by a certificate authority, ensuring their authenticity and integrity. These apps can be designed to operate in offline mode, storing data locally when there's no internet connection and syncing it back to the server once connectivity is restored. This capability is crucial for field operations in remote areas, ensuring uninterrupted app functionality and data collection. Reference: Pega Community documentation on mobile app development and offline capabilities.

#### 問題 #61

You want to create a new minor version of an application ruleset to add a new feature to your application. The new feature will be made available to users in a phased rollout.

How do you update the application to add the new ruleset version?

- A. Lock and roll the existing ruleset, and update the existing application version.
- B. Create a branch ruleset and a new application, and add the branch ruleset to the application.
- C. Lock and roll the existing ruleset, and create a new application version.
- D. Create a new application version and add the new ruleset version as a production ruleset.

答案： A

解題說明：

To add a new minor version of an application ruleset for a phased rollout, you would lock the current version of the ruleset to prevent further changes (this is referred to as "rolling" the ruleset), and then create a new minor version. The application record should be updated to reference this new minor version of the ruleset.

This ensures that the new features can be tested and gradually released to the user base without the need to create a completely new application version. References: Pega Senior System Architect documentation on versioning and release practices.

#### 問題 #62

When deploying mashup code in a webpage, which option is necessary to ensure that Pega Platform accepts incoming requests?

- A. Enable authentication policies on Pega Platform.
- B. Add the host URL in the Pega application.
- C. Ensure the host is configured to support HTTPS.
- D. Establish a private tunnel from the host to Pega Platform.

答案： B

解題說明：

When deploying mashup code in a webpage, it is necessary to add the host URL in the Pega application to ensure that Pega Platform accepts incoming requests. This is part of configuring the trusted origins within the application's settings. Reference: Pega official documentation on Pega Web Mashup deployment and configuration.

#### 問題 #63

During an Account review case, an accountant wants to evaluate the client's retirement plan. A Retirement planning case is created that runs in parallel with the Account review case. Neither case waits for nor reports to the other.

To configure this workflow, which type of parallel processing shape do you use?

- A. ☐
- B. ☐
- C. ☒
- D. ☐

答案： C

The correct configuration for two parallel cases that run independently is the Subprocess shape with the Spinoﬀ flow option enabled (Option C). This allows the Retirement planning case to proceed in parallel without waiting for, or reporting to, the Account review case. References: Pega oﬃcial documentation on case design and flow shapes.
