

# 100% Pass 2026 Splunk SPLK-3002: Splunk IT Service Intelligence Certified Admin Newest Latest Real Test

P.S. Free & New SPLK-3002 dumps are available on Google Drive shared by ExamDumpsVCE: [https://drive.google.com/open?id=1JS\\_1cqWlK4MOF1MCG021e41KPQmuMQXm](https://drive.google.com/open?id=1JS_1cqWlK4MOF1MCG021e41KPQmuMQXm)

The SPLK-3002 study guide to good meet user demand, will be a little bit of knowledge to separate memory, every day we have lots of fragments of time, such as waiting in line to take when you eat, or time in buses commute on the way by subway every day, but when you add them together will be surprised to find a day we can make use of the time is so much debris. We have three version of our SPLK-3002 Exam Questions which can let you study at every condition so that you can make full use of your time. And you will get the SPLK-3002 certification for sure.

Splunk SPLK-3002 exam is one of the most sought-after certifications in the IT industry as it validates the skills and expertise of admins in managing ITSI in a Splunk environment. SPLK-3002 exam requires the candidates to have a deep understanding of machine data analysis, IT operations, and cloud monitoring. SPLK-3002 exam questions cover a range of topics such as ITSI architecture, data models, services, entities, and modules, and configuring data inputs, customizing metrics and KPIs, configuring policies and alerts, and configuring Glass tables. By passing the SPLK-3002 Exam, IT professionals can prove their skills in managing ITSI effectively and improve their career prospects in the field of IT operations management.

## **SPLK-3002 Dumps PDF, Test SPLK-3002 Collection Pdf**

Passing the SPLK-3002 exam is your best career opportunity. The rich experience with relevant certificates is important for enterprises to open up a series of professional vacancies for your choices. Our website's SPLK-3002 learning quiz bank and learning materials look up the latest questions and answers based on the topics you choose. This choice will serve as a breakthrough of your entire career, so prepared to be amazed by high quality and accuracy rate of our SPLK-3002 Study Guide.

Splunk SPLK-3002 Exam consists of 60 multiple-choice and multiple-select questions, which must be completed within 90 minutes. SPLK-3002 exam is available in English and Japanese and can be taken online or in-person at a Pearson VUE testing center. Successful candidates will receive the Splunk ITSI Certified Admin certification, which is valid for two years. Splunk IT Service Intelligence Certified Admin certification demonstrates that the individual has the knowledge and skills required to manage and

maintain ITSI deployments, helping organizations to improve their IT and business services.

## Splunk IT Service Intelligence Certified Admin Sample Questions (Q29-Q34):

### NEW QUESTION # 29

Which of the following statements describe default glass tables in ITSI?

- A. There are no default glass tables.
- B. There is one default glass table per service.
- C. The Service Health Score default glass table.
- D. There is one service template default glass table.

**Answer: A**

Explanation:

In Splunk IT Service Intelligence (ITSI), glass tables are fully customizable dashboards that provide a visual representation of an organization's IT environment, along with the health and status of services and KPIs. Unlike some pre-configured views or dashboards that might come with default setups in various platforms, ITSI does not provide default glass tables out of the box. Instead, users are encouraged to create their own glass tables tailored to their specific monitoring needs and operational views. This approach ensures that each organization can design glass tables that best represent their unique infrastructure, applications, and service landscapes, providing a more personalized and relevant operational overview.

### NEW QUESTION # 30

Which of the following is a characteristic of base searches?

- A. Search expression, entity splitting rules, and thresholds are configured at the base search level.
- B. The base search will execute whether or not a KPI needs it.
- C. It is possible to filter to entities assigned to the service for calculating the metrics for the service's KPIs.
- D. The fewer KPIs that share a common base search, the more efficiency a base search provides, and anomaly detection is more efficient.

**Answer: C**

Explanation:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/BaseSearch> A base search is a search definition that can be shared across multiple KPIs that use the same data source.

Base searches can improve search performance and reduce search load by consolidating multiple similar KPIs. One of the characteristics of base searches is that it is possible to filter to entities assigned to the service for calculating the metrics for the service's KPIs. This means that you can use entity filtering rules to specify which entities are relevant for each KPI based on the base search results. References: Create KPI base searches in ITSI, [Filter entities for KPIs based on base searches]

### NEW QUESTION # 31

Which of the following are characteristics of service templates? (select all that apply)

- A. Service templates contain domain specific dashboards and deep dives.
- B. Service templates can be modified after services are instantiated from it.
- C. Service templates contain KPIs and KPI thresholds.
- D. Service templates can contain specific or generic entity rules.

**Answer: C,D**

Explanation:

Service templates in Splunk IT Service Intelligence (ITSI) are designed to streamline the creation of services by providing pre-defined configurations:

B) Service templates contain KPIs and KPI thresholds: This allows for the standardized deployment of services with predefined performance indicators and their associated thresholds, ensuring consistency across similar services.

C) Service templates can contain specific or generic entity rules: These rules define how entities are associated with services created from the template, allowing for both broad and targeted applicability.

While service templates contain configurations for KPIs, thresholds, and entity rules, the ability to modify templates after services

have been instantiated from them is limited. Changes to a template do not retroactively affect services already created from that template. Moreover, service templates do not inherently contain domain-specific dashboards or deep dives; these are created separately within ITSI.

### NEW QUESTION # 32

When installing ITSI to support a Distributed Search Architecture, which of the following items apply? (Choose all that apply.)

- **A. Copy SA-IndexCreation to all indexers.**
- B. Extract ITSI app package into etc/apps directory of search head.
- C. Copy SA-IndexCreation to the etc/apps directory on the index cluster master node.
- D. Extract installer package into etc/apps directory of the cluster deployer node.

**Answer: A**

Explanation:

Copy SA-IndexCreation to \$SPLUNK\_HOME/etc/apps/ on all individual indexers in your environment.

Reference:

A is the correct answer because when installing ITSI to support a distributed search architecture, you need to copy SA-IndexCreation to all indexers. SA-IndexCreation is an app that contains the definitions of the ITSI indexes, such as itsi\_summary, itsi\_tracked\_alerts, itsi\_grouped\_alerts, etc. You need to copy this app to all indexers to ensure that they can store and search the ITSI data. B is not a correct answer because you do not need to copy SA-IndexCreation to the etc/apps directory on the index cluster master node. The index cluster master node does not store or search data, it only manages the replication and availability of data across the index cluster peers. C is not a correct answer because you do not need to extract the installer package into etc/apps directory of the cluster deployer node. The cluster deployer node is used to distribute apps and configuration updates to the search head cluster members. You need to extract the installer package into etc/shcluster/apps directory of the cluster deployer node instead. D is not a correct answer because you do not need to extract the ITSI app package into etc/apps directory of search head. You need to extract the ITSI app package into etc/shcluster/apps directory of the cluster deployer node and use the deployer to push the app to all search head cluster members. Reference: [Install Splunk IT Service Intelligence on a search head cluster], [Install Splunk IT Service Intelligence on an indexer cluster]

### NEW QUESTION # 33

In distributed search, which components need to be installed on instances other than the search head?

- **A. SA-IndexCreation and SA-ITSI-Licensechecker on indexers.**
- B. SA-ITSI-Licensechecker on indexers.
- C. SA-IndexCreation and SA-ITOA on indexers; SA-ITSI-Licensechecker and SA-UserAccess on the license master.
- D. SA-IndexCreation on indexers; SA-ITSI-Licensechecker and SA-UserAccess on the license master.

**Answer: A**

Explanation:

SA-IndexCreation is required on all indexers. For non-clustered, distributed environments, copy SA-IndexCreation to \$SPLUNK\_HOME/etc/apps/ on individual indexers.

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/Install/InstallDD> In distributed search, the components that need to be installed on instances other than the search head are SA-IndexCreation and SA-ITSI-Licensechecker on indexers. SA-IndexCreation is an add-on that creates the indexes required by ITSI, such as itsi\_summary and itsi\_tracked\_alerts. SA-ITSI-Licensechecker is an add-on that monitors the license usage of ITSI and generates alerts when the license limit is exceeded or about to expire. These components need to be installed on indexers because they handle the data ingestion and storage functions for ITSI. The other components, such as ITSI app and SA-ITOA, need to be installed on the search head(s) because they handle the search management and presentation functions for ITSI. References: Install IT Service Intelligence in a distributed environment
