SAP Certified Associate - Positioning SAP Business Technology Platform as

part of SAP Business Suite 認定 C_BCBTP_2502 試験問題 (Q18-Q23):

質問 # 18

Which SAP BTP service plays a key role in integrating finance-related processes across enterprise systems?

- A. SAP Integration Suite
- B. SAP Ariba
- C. SAP Conversational AI
- D. SAP Business Network

正解: A

解説:

In the modern enterprise, financial processes rarely exist in a vacuum; they often require data from procurement, sales, payroll, and external banking institutions. SAP Integration Suite is the essential service on SAP BTP that facilitates this cross-system connectivity. It acts as an Integration Platform-as-a-Service (iPaaS) that enables the seamless flow of financial data between the SAP S/4HANA core and other third-party or legacy systems. By utilizing pre-built integration flows and specialized adapters, organizations can automate complex financial tasks such as bank statement processing, tax reporting across different jurisdictions, and real-time payment reconciliations.

The strategic positioning of the Integration Suite within the finance domain is to eliminate "data islands." When financial data is siloed, it leads to delays in closing the books and increases the risk of manual errors.

By using SAP Integration Suite, businesses can ensure that every financial transaction-regardless of where it originates-is reflected accurately in the central ledger. This real-time synchronization is critical for maintaining compliance and providing the CFO's office with an accurate, up-to-the-minute view of the company's financial health. While SAP Ariba and SAP Business Network handle specific transactional interactions, they rely on the underlying Integration Suite to pass that data back into the core financial systems.

質問 # 19

Which SAP BTP product is critical for financial forecasting and analytics?

- A. SAP HANA Cloud
- B. SAP Ariba
- C. SAP Fieldglass
- D. SAP Business Network

正解: A

解説:

For financial forecasting to be effective, it requires the ability to process massive amounts of historical and real-time data with extreme speed. SAP HANA Cloud is the critical foundational product on SAP BTP that enables this. As a cloud-native, in-memory database, it allows for the convergence of transactional (OLTP) and analytical (OLAP) processing. This means that finance teams can run complex forecasting models directly on live transactional data without the need for time-consuming data transfers to separate data warehouses.

In the context of the SAP Business Suite, SAP HANA Cloud acts as the "single source of truth." It provides the high-performance data engine required by tools like SAP Analytics Cloud to perform predictive modeling and "what-if" simulations. Whether a company is predicting cash flow, modeling market volatility, or performing year-end consolidations, HANA Cloud ensures that the underlying data is accessible and processed in sub-seconds. This capability is essential for modern finance departments that must move from descriptive analytics (what happened) to predictive and prescriptive analytics (what will happen and what should we do). While Ariba and Fieldglass provide the source data for procurement and contingent labor, it is SAP HANA Cloud that provides the computational power necessary to turn that data into strategic financial insights.

質問 # 20

How does SAP HANA Cloud improve business data processing?

- A. Enables in-memory computing for real-time analytics.
- B. Eliminates cloud computing in favor of on-premise storage.
- C. Restricts data access to SAP applications only.
- D. Requires batch processing for data retrieval.

正解: A

解説:

The primary innovation of SAP HANA Cloud is its in-memory computing engine, which stores data in RAM rather than on traditional spinning disks. This architecture allows for the processing of vast amounts of data at speeds that are orders of magnitude faster than legacy databases. For the SAP Business Suite, this means that the boundary between "doing the work" (transactions) and "analyzing the work" (analytics) disappears. Users can run complex, multi-dimensional analytical queries on live, "hot" data without the need for time-consuming data extracts or batch processing.

By enabling real-time analytics, SAP HANA Cloud empowers business leaders to make decisions based on what is happening now, rather than what happened last week. It also introduces "data tiering," which allows organizations to manage costs by keeping frequently accessed data in-memory while moving less critical data to cheaper "warm" or "cold" storage (Data Lake), all while keeping it accessible through a single interface.

This flexibility is essential for modern enterprises that deal with "Big Data" but require the agility of the cloud. Positioning HANA Cloud as the data foundation of BTP ensures that every application built on the platform is inherently fast, scalable, and capable of delivering instant insights.

質問 # 21

Which SAP BTP services support AI-driven automation? (Choose two).

- A. SAP Business Process Intelligence
- B. SAP Business Network
- C. SAP Concur
- D. SAP AI Core

正解: A、D

解説:

AI-driven automation on SAP BTP is achieved through a combination of foundational infrastructure and process analysis tools. SAP AI Core is a key service that provides a dedicated runtime for AI workloads. It allows developers to manage the entire lifecycle of machine learning models-from training to deployment- at scale. It is designed to handle large datasets and complex computations while ensuring that AI models are transparent and compliant with enterprise standards. By using SAP AI Core, businesses can embed predictive capabilities directly into their business logic.

Complementing this is SAP Business Process Intelligence (part of the SAP Signavio suite). This service uses AI to "mine" data from existing business processes to identify inefficiencies, bottlenecks, and manual tasks that are prime candidates for automation. It provides the "sight" to see where automation is needed, while SAP AI Core provides the "brain" to execute intelligent decisions. Together, these services allow an organization to move beyond simple task automation toward intelligent process transformation. SAP Concur and SAP Business Network, while benefiting from these technologies, are SaaS applications rather than the underlying services that facilitate the creation and management of AI-driven automation workflows within the BTP ecosystem.

質問 # 22

What is the key advantage of using SAP Business Application Studio?

- A. Provides a cloud-native development environment with modern tooling.
- B. Requires on-premise deployment for all applications.
- C. Eliminates the need for full-stack development.
- D. Restricts the use of external DevOps integrations.

正解: A

解説:

SAP Business Application Studio (BAS) is the next-generation development environment on SAP BTP, evolving from the previous SAP Web IDE. Its primary advantage lies in providing a cloud-native development environment that mimics a local desktop experience while being accessible entirely via a web browser. It is built on the open-source "Theia" framework (similar to VS Code), which allows developers to use modern tooling, terminal access, and a wide array of extensions tailored specifically for SAP-centric development, such as SAP Fiori, SAP Cloud Application Programming Model (CAP), and mobile development.

Positioning BAS as a core part of the SAP Business Suite ecosystem is crucial because it simplifies the "setup" phase of development. Developers no longer need to configure complex local environments; instead, they use pre-configured "Dev Spaces" optimized for specific business scenarios. This ensures consistency across development teams and streamlines the path from coding to deployment on the SAP BTP Cloud Foundry or Kyma runtimes. By integrating seamlessly with Git for version control and supporting standard DevOps practices, BAS allows enterprises to modernize their development lifecycle, moving away from legacy monolithic structures toward agile, microservices-based extensions that enhance the core SAP landscape without

disrupting it.
