ISTQB Foundation Level - Acceptance Testing

P.S. Free & New CTFL-AcT dumps are available on Google Drive shared by ExamsReviews: https://drive.google.com/open?id=1GuO9vZdI41Jxcrd5U_B-HMATLRLMTR8z

You can use this CTFL-AcT practice exam software to test and enhance your ISTQB Foundation Level - Acceptance Testing (CTFL-AcT) exam preparation. Your practice will be made easier by having the option to customize the CTFL-AcT Exam Dumps. The fact that it runs without an active internet connection is an incredible comfort for users who don't have access to the internet all the time.

ISQI CTFL-AcT exam covers a wide range of topics related to acceptance testing. It includes topics such as the principles of acceptance testing, the testing process, test design techniques, and defect management. CTFL-AcT exam also includes questions on the different types of acceptance testing, such as user acceptance testing and business acceptance testing. Candidates are required to have a good understanding of these topics to pass the exam.

The CTFL-AcT exam covers a broad range of topics, including the principles of acceptance testing, testing techniques, and test management. It also includes questions related to the software development lifecycle, software testing fundamentals, and the role of acceptance testing in the overall process. CTFL-AcT Exam is administered online and consists of 40 multiple-choice questions that must be answered within 60 minutes.

The ISQI CTFL-AcT exam covers various topics related to acceptance testing, including the fundamentals of acceptance testing, the acceptance testing process, test design techniques, and defect management. It also tests the candidate's knowledge of different types of acceptance testing, such as user acceptance testing, operational acceptance testing, and regulatory acceptance testing.

Perfect CTFL-AcT Exam Simulator | Amazing Pass Rate For CTFL-AcT Exam | High Pass-Rate CTFL-AcT: ISTQB Foundation Level - Acceptance Testing

With the development of the times, the pace of the society is getting faster and faster. If we don't try to improve our value, we're likely to be eliminated by society. Under the circumstances, we must find ways to prove our abilities. For example, getting the CTFL-AcT Certification is a good way. If we had it, the chances of getting a good job would be greatly improved. However, obtaining the CTFL-AcT certification is not an easy task.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q41-Q46):

NEW QUESTION # 41

As an acceptance tester you want to test the \$100 withdrawal process described by the following Business Process Model and Notation (BPMN) model.

□

You would like to achieve the following coverage criterion "execute all possible process tasks". Consider the following test cases:

Test 1: balance = \$100, receipt = YES

Test 2: balance = \$120, receipt = NO

Test 3: balance = \$85

Test 4: balance = \$20, receipt = YES

Which of the following is the minimal set of test cases allowing to achieve required coverage?

- A. Test 1, Test 3
- B. Test 2, Test 4
- C. Test 1, Test 2, Test 3
- D. Test 1, Test 2, Test 4

Answer: A

NEW QUESTION # 42

Which one of the following statements regarding the graphical representation of business processes is true?

- A. Graphical representations of business processes must describe the complete workflow in detail, including alternative and error scenarios.
- B. Using decision tables in BPMN allows defining test conditions corresponding to the business rules under test.
- C. Business processes should be described graphically using the DMN standard and completed with decision tables.
- D. For acceptance testing, graphical business process models should focus on the user workflows to be tested.

Answer: D

Explanation:

Graphical representations of business processes, particularly using BPMN (Business Process Model and Notation), serve as a bridge between business stakeholders and testers. These models help visualize the steps a user or system goes through, making it easier to derive test cases.

Option C is correct because acceptance testing aims to validate the system's behavior from the user or business perspective. Therefore, focusing on key user workflows (rather than exhaustive technical or exception paths) aligns with the purpose of acceptance testing: to ensure that the system meets agreed-upon business requirements.

Option A is incorrect because decision tables are part of DMN (Decision Model and Notation), not BPMN.

Option B is too rigid - not all alternative/error paths must be modeled in early acceptance testing unless they are critical to business rules.

Option D misapplies the standards - DMN is used to model business rules, not the complete business process.

C). For acceptance testing, graphical business process models should focus on the user workflows to be tested.

NEW QUESTION # 43

Which of the following statements regarding test execution and defect analysis is MOST correct?

- A. Business analysts and testers explore the business process model to execute the acceptance test
- B. Testers compare the actual execution outcome to acceptance criteria and report deviations, if observed
- C. Business analysts repeat failed acceptance test to assess the impact if the observed behavior
- D. The document defects are assigned to a developer so that he or she can fix it for the next version

Answer: B

Explanation:

In acceptance testing, testers execute test cases that are directly derived from user stories or requirements via their acceptance criteria. During execution, testers compare the actual outcome of the system with the expected result described in the acceptance criteria. If there's a mismatch (a deviation), it is documented as a defect or discrepancy.

This process is essential for validating that the system meets business needs. The tester's role includes reporting clear, objective findings-not fixing the defect or deciding its severity (which might involve developers or business analysts).

Option A is incorrect: Business analysts may support testing, but execution is primarily a tester's responsibility.

Option C is not fully correct: While developers may fix defects, assignment and triage follow a formal workflow and do not happen automatically.

Option D is incorrect: Business analysts don't repeat test executions; this is the tester's responsibility.

NEW QUESTION # 44

How does ISTQB CTFL test activities relate to the IQBBA FL business analysis and requirements engineering activities?

- A. The IQBBA solution evaluation phase precedes the ISTQB test implementation and test execution activities.
- B. Business analysts who follow the IQBBA requirements engineering process will not be involved in designing test cases.
- C. Business analysts and tester have to decide, whether they follow the IQBBA or ISTQB lifecycle processes, because they exclude each other.
- D. Test analysis and test design activities may result in changes of acceptance criteria.

Answer: D

Explanation:

The relationship between testing and requirements engineering is iterative and collaborative. According to ISTQB CTFL and IQBBA FL syllabi, test activities such as test analysis and test design involve reviewing and interpreting acceptance criteria to derive test conditions and test cases. During this process, testers may identify ambiguities, conflicts, or missing acceptance conditions. These insights often result in feedback to business analysts or stakeholders, leading to refinement or changes in the acceptance criteria to ensure clarity, completeness, and testability.

This iterative feedback loop is essential in both Agile and traditional lifecycles. Therefore, option D is correct.

It reflects the dynamic interaction between requirements and test design, where improving one often improves the other.

Other options are incorrect:

Option A falsely assumes business analysts don't engage in test design, while in practice, they collaborate closely with testers.

Option B incorrectly suggests that IQBBA and ISTQB lifecycles are mutually exclusive. In fact, they complement each other.

Option C is incorrect in sequencing. In reality, solution evaluation (IQBBA) follows test execution, not precedes it.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 1.3.2):

"During test analysis, inconsistencies or missing information in the acceptance criteria can be identified and addressed through collaboration with business analysts."

NEW QUESTION # 45

What is considered as good practice regarding business process modeling?

- A. BPMN diagrams and DMN tables should include information such as traceability to user stories.
- B. Business analysts should finalize their process models before showing them to acceptance testers.
- C. Keeping all model element in one diagram considerably improves the readability of BPMN models.
- D. Links to requirements or risks should be well separated from the workflow description.

Answer: A

NEW QUESTION # 46
