CheckPoint 156-315.81 certification can guarantee you have good job prospects, because CheckPoint certification 156-315.81 exam is a difficult test of IT knowledge, passing CheckPoint Certification 156-315.81 Exam proves that your IT expertise is strong and you can be qualified for a good job.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q106-Q111):

NEW QUESTION # 106

How many users can have read/write access in Gaia at one time?

- A. Infinite
- B. Two
- C. Three
- **D. One**

Answer: D

Explanation:

How many users can have read/write access in Gaia at one time? Only one user can have read/write access in Gaia at one time. This is to prevent conflicts and inconsistencies in the configuration changes made by different users. If another user tries to login with read/write access while a user is already logged in, they will receive a warning message and will be given the option to either login with read-only access or force the other user to logout. Reference: [Gaia Administration Guide R81], page 15.

NEW QUESTION # 107

What is the correct description for the Dynamic Balancing / Split feature?

- A. Dynamic Balancing / Split dynamically distribute the traffic from one network interface to multiple SND's. The interface must support Multi-Queue. It is only available on Quantum Appliances (not on Quantum Spark or Open Server)
- B. Dynamic Balancing / Split dynamically distribute the traffic from one network interface to multiple SND's. The interface must support Multi-Queue. It is only available on Quantum Appliances and Open Server (not on Quantum Spark)
- **C. Dynamic Balancing / Split dynamically change the number of SND's and firewall instances based on the current load. It is only available on Quantum Appliances (not on Quantum Spark or Open Server)**
- D. Dynamic Balancing / Split dynamically change the number of SND's and firewall instances based on the current load. It is only available on Quantum Appliances and Open Server (not on Quantum Spark)

Answer: C

Explanation:

Explanation

The correct description for the Dynamic Balancing / Split feature is:

Dynamic Balancing / Split dynamically change the number of SND's and firewall instances based on the current load.

It is only available on Quantum Appliances (not on Quantum Spark or Open Server) The Dynamic Balancing / Split feature is a performance-enhancing daemon that balances the load between CoreXL SNDs and CoreXL Firewalls. It monitors the average CPU utilization of CoreXL Firewall and SND instances and automatically increases or decreases the number of CoreXL Firewall instances. The Dynamic Balancing Daemon (dsd) has three stages in each iteration: Examine the current CPU utilization, Calculate the optimal split, and Apply the new split.

The Dynamic Balancing / Split feature is supported on Check Point Appliances, such as Quantum Appliances, Quantum Maestro, Quantum Security Gateways, and Quantum LightSpeed Appliances in KPPAK mode2. It is not supported on Quantum Spark appliances, which are designed for small and medium businesses. It is also not supported on Open Server platforms, which are general-purpose servers that run Check Point software on top of third-party operating systems.

NEW QUESTION # 108

What information is NOT collected from a Security Gateway in a Cpinfo?

- A. System message logs
- B. OS and network statistics

- C. Configuration and database files
- **D. Firewall logs**

Answer: D

Explanation:

In a Cpinfo (Checkpoint information) command, various information is collected from a Security Gateway. However, firewall logs are NOT collected from a Security Gateway in a Cpinfo.

A) Firewall logs

The Cpinfo command typically collects information such as configuration and database files, system message logs, OS and network statistics, but it does not include firewall logs. Firewall logs are usually obtained separately using other methods or tools.

NEW QUESTION # 109

The log server sends what to the Correlation Unit?

- A. Authentication requests
- **B. Logs**
- C. Event Policy
- D. CPMI dbsync

Answer: B

Explanation:

The log server sends logs to the Correlation Unit. The Correlation Unit analyzes the logs and generates events based on the event policy. The events are then sent to the SmartEvent Server, which displays them in the SmartEvent GUI. References: [SmartEvent Administration Guide]

NEW QUESTION # 110

Fill in the blank: The command _____ provides the most complete restoration of a R81 configuration.

- A. cpconfig
- B. fwm dbimport -p <export file>
- C. cpinfo -recover
- **D. upgrade_import**

Answer: D
