

EAEP2201 Latest Braindumps Book & Valid EAEP2201 Exam Online

What's more, part of that PDF Braindumps EAEP2201 dumps now are free: <https://drive.google.com/open?id=1jajrLxDDPIEjwN3ssA-Jtc7wjQZGQF20>

The clients at home and abroad can both purchase our EAEP2201 study tool online. Our brand enjoys world-wide fame and influences so many clients at home and abroad choose to buy our EAEP2201 test guide. Our company provides convenient service to the clients all around the world so that the clients all around the world can use our EAEP2201 Study Materials efficiently. Our company boosts an entire sale system which provides the links to the clients all around the world so that the clients can receive our EAEP2201 exam questions timely.

The EAEP2201 exam is designed for GIS professionals who are responsible for managing Esri enterprise GIS systems. This includes tasks such as designing, deploying, configuring, and maintaining enterprise GIS systems, as well as providing technical support to users. EAEP2201 Exam covers a range of topics, including server architecture, security, performance tuning, and data management.

Free Download Esri EAEP2201 Latest Braindumps Book Are Leading Materials & Valid EAEP2201: Enterprise Administration Professional 2201

Our EAEP2201 exam questions are authoritatively certified. Our goal is to help you successfully pass relevant exam in an efficient learning style. Due to the quality and reasonable prices of our EAEP2201 training materials, our competitiveness has always been a leader in the world. Our EAEP2201 Learning Materials have a higher pass rate than other EAEP2201 training materials, so we are confident to allow you to gain full results.

Esri EAEP2201: Enterprise Administration Professional 2201 exam is a comprehensive certification that is designed to evaluate the skills and knowledge of GIS professionals working in enterprise environments. EAEP2201 exam helps individuals demonstrate their expertise in implementing and administering the Esri platform in an enterprise setting, which is a valuable credential for those looking to advance their careers in the GIS industry. The EAEP2201 Certification sets an industry-standard for enterprise GIS administrators and demonstrates a commitment to ongoing professional development.

Esri Enterprise Administration Professional 2201 Sample Questions (Q23-Q28):

NEW QUESTION # 23

A client has an internet-accessible ArcGIS Enterprise deployment with the Web Adaptors in the DMZ, and the remaining components are on an internal network behind a firewall. A user on the internet must access a web map in that environment. Which ports must be open in the firewall between the DMZ and the internal network?

- A. 443 and 6443
- B. 6443 and 7443

- C. 2443 and 6443
- D. 80 and 443

Answer: B

Explanation:

Web Adaptors in the DMZ must forward requests to internal components (Portal and Server). These internal services operate over HTTPS via ports:

* 7443 for Portal for ArcGIS

* 6443 for ArcGIS Server

Therefore, the firewall must allow traffic over ports 6443 and 7443 from the Web Adaptors (DMZ) to the respective internal services.

From ArcGIS Enterprise security documentation:

"When using Web Adaptors in the DMZ, make sure ports 6443 and 7443 are open between the Web Adaptors and the internal ArcGIS Server and Portal components respectively."

* Option B is partially correct but leaves out Portal (7443).

* Option C is for HTTP/HTTPS access from the public, not internal communications.

* Option D includes the Data Store admin port (2443), which isn't required here.

NEW QUESTION # 24

An ArcGIS Enterprise deployment is expanding one of its ArcGIS Server sites from one to three machines because some services now require additional resources. Half the services use a shared instance, and the other half includes dedicated instances.

What will happen to the minimum number of ArcSOCs running on the site?

- A. Three times as many ArcSOCs will be running
- B. One and a half times as many ArcSOCs will be running
- C. The same number of ArcSOCs will be running

Answer: A

Explanation:

When expanding an ArcGIS Server site from one to three machines, the number of ArcSOC processes (service instances) will increase proportionally. For dedicated instances, each service's minimum and maximum instances are configured per machine, so tripling the number of machines will triple the number of dedicated ArcSOCs. For shared instances, the shared instance pool runs on each machine, and the number of shared instances is configured per machine. Therefore, the total number of ArcSOCs (both dedicated and shared) will be approximately three times greater after the expansion.

NEW QUESTION # 25

An ArcGIS Enterprise deployment is completely internal and does not have access to the internet. How should the organization find patches and updates for the deployment components?

- A. Refer to the Patches and Service Pack page on the Esri Support website
- B. Run the patch notification bat utility from the command line
- C. Open the Check For Updates option on the machine where ArcGIS Server is installed

Answer: B

Explanation:

For environments without internet access, the organization can use the patchnotification.bat utility to check for available patches and updates. This utility can be run from the command line and provides information about the current patch status of the ArcGIS Enterprise components. Administrators can then manually download the necessary patches from another machine with internet access and transfer them to the internal environment for installation.

Reference Source: ArcGIS Enterprise documentation on checking for and installing software patches and updates

NEW QUESTION # 26

Users are reporting service timeouts and performance issues. The administrator notices that only the minimum number of instances are running during performance spikes. They want to monitor usage trends before adjusting instance settings.

Which action should the administrator perform?

- A. Change the log level to Debug in ArcGIS Server Manager
- B. Enable Windows Performance Monitor
- **C. Create a report of server statistics in ArcGIS Server Manager**
- D. Monitor Task Manager on each ArcGIS Server machine

Answer: C

Explanation:

To monitor usage patterns, including the number of requests and instances in use, ArcGIS Server provides statistics reports in Server Manager. These reports show peak and average service usage, helping administrators decide how to scale service instance counts. From ArcGIS Server documentation:

"Use the ArcGIS Server Manager statistics reporting tool to monitor service usage trends over time. This data helps inform adjustments to instance counts."

* Option A gives only raw system metrics, not service-specific insights.

* Option B (Debug logs) causes overhead and isn't appropriate for monitoring trends.

NEW QUESTION # 27

A client has an internet-accessible ArcGIS Enterprise deployment with the Web Adaptors in the DMZ, and the remaining components are on an internal network behind a firewall. A user on the internet must access a web map in that environment. Which ports must be open in the firewall between the DMZ and the internal network?

- A. 443 and 6443
- **B. 80 and 443**
- C. 6443 and 7443
- D. 2443 and 6443

Answer: B
