- B. NetPath
- C. device studio
- D. network insight

Answer: A

NEW QUESTION # 92

Upon logging into the web console to check node statuses, it is noted that several nodes display a "down" status when they are up and running. Which two of the following situations are the likely causes of this issue? (Choose two.)

- A. polling interval set to value other than default

- B. nodestatus must be set to au management
- C. ICMP blocked from polling engine to target node
- D. nodes using incorrect SNMP credentials

Answer: C,D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SolarWinds determines node status by polling using ICMP (ping) and SNMP. If ICMP is blocked by a firewall or network device between the polling engine and the monitored node, the node will appear "down" in the web console even though it is actually up. Likewise, if the SNMP credentials configured in SolarWinds are incorrect, the polling engine cannot successfully query the device, leading to a false "down" status.

From the documentation:

"If ICMP packets are blocked or dropped, SolarWinds cannot determine node status, resulting in false down events."

"Incorrect SNMP community strings or credentials will prevent node polling, and these nodes may appear down in the console."

Changing the polling interval or node management settings does not directly cause this issue.
