The PDF version of the CompTIA Project+ Certification Exam (PK0-005) exam questions is also readily printable, allowing you to keep tangible copies of the CompTIA Project+ Certification Exam (PK0-005) questions with you at all times.

CompTIA Project+ Certification Exam Sample Questions (Q161-Q166):

NEW QUESTION # 161

A new junior PM who has ownership of a project does not understand how to manage conflicts involving

multiple personalities. Which of the following is the best order of the stages the PM should follow to nurture the team to high performance?

- A. Forming, performing, storming, norming, adjourning
- B. Forming, storming, performing, norming, adjourning
- C. Forming, norming, storming, performing, adjourning
- **D. Forming, storming, norming, performing, adjourning**

Answer: D

Explanation:

This is the correct order of the stages of team development according to Tuckman's model¹²³. The forming stage is where team members first meet and get acquainted. The storming stage is where team members experience conflicts and disagreements. The norming stage is where team members resolve their differences and establish norms and rules. The performing stage is where team members work together effectively and efficiently. The adjourning stage is where team members complete the project and celebrate their achievements. References = CompTIA Project+ Study Guide: Exam PK0-005, 3rd Edition, Chapter 6: Project Team Management, p. 197; The 5 Stages of Team Development (Including Examples) | Upwork; The 5 Stages of Team Development - Teamwork; Using the Stages of Team Development | MIT Human Resources

NEW QUESTION # 162

Which of the following communication tools would a project manager use to broadcast information without being assured the information will be received?

- A. Telephone
- B. Videoconference
- **C. Email**
- D. Face-to-face

Answer: C

Explanation:

Email is a communication tool that allows the project manager to send information to one or more recipients without requiring immediate feedback or confirmation of receipt. Email can be used to broadcast information that is not urgent or critical, such as status updates, meeting minutes, or general announcements¹, p. 75

NEW QUESTION # 163

A project manager decided to host the development environment on a cloud service. Which of the following would the project manager most likely use for this purpose?

- **A. IaaS**
- B. SaaS
- C. DaaS
- D. XaaS

Answer: A

Explanation:

IaaS (Infrastructure as a Service) provides virtualized computing resources, such as storage and servers, necessary for hosting a development environment. According to CompTIA Project+, IaaS is ideal for environments requiring infrastructure control without hardware management.

NEW QUESTION # 164

A company that is implementing an updated version of its main product hired a new project manager to lead the project. Prior to the start of the project, the sponsor asked the project manager to prepare a report on the defects found in the previous project to avoid a decrease in production. The report shows that the two main defects are related to cosmetic and physical damage to the product. Which of the following charts would BEST prioritize which defects to address?

- A. Control
- **B. Pareto**
- C. Run
- D. Histogram

Answer: B

Explanation:

The project manager should use a Pareto chart to prioritize which defects to address for the product. A Pareto chart is a type of bar chart that shows the frequency or impact of different causes of problems or defects. It also shows a cumulative line that represents the percentage of the total frequency or impact. A Pareto chart can help to prioritize the causes that have the most significant effect on the quality of the product and apply the 80/20 rule, which states that 80% of the problems are caused by 20% of the causes.

NEW QUESTION # 165

A project team selected a random sample of patient accounts for testing the deliverable. The data was masked since it contained patient names. Which of the following describes this type of data?

- **A. Personally identifiable information**
- B. Security clearance
- C. Confidential information
- D. Protected health information

Answer: A

Explanation:

Personally identifiable information (PII) is any data that can be used to identify, contact, or locate a specific individual, either alone or combined with other sources. PII includes information such as name, address, phone number, email address, social security number, etc. Patient names are examples of PII, and therefore the data that contains them should be masked or anonymized to protect the privacy and security of the patients.

Confidential information, protected health information, and security clearance are not types of data, but rather categories or levels of data sensitivity that may require different degrees of protection or access control.
