### GIAC Reverse Engineering Malware Sample Questions (Q134-Q139):

#### NEW QUESTION # 134

Which of the following is a sign that a malware sample is packed?

- A. The sample generates extensive network traffic upon execution.
- B. The binary size is unusually small.
- C. The binary contains large amounts of unreadable content in its PE sections.
- D. The sample immediately executes its main payload.

Answer: C

#### NEW QUESTION # 135

Which Windows API most strongly indicates credential harvesting?

- A. OpenProcess()
- B. CryptEncrypt()
- C. LogonUser()
- D. CreateRemoteThread()

Answer: C

#### NEW QUESTION # 136

Process hollowing is a technique used by malware.

What is the final step in this process?

- A. Injecting the malicious code into the address space of the process
- B. Creating a new, legitimate process in a suspended state
- C. Unmapping the memory of the legitimate process
- D. Resuming the thread of the new process

Answer: D

#### NEW QUESTION # 137

In the context of malware analysis, what is the significance of detecting packed or encrypted sections within a binary?

- A. It indicates that the binary is likely benign.
- B. It means the binary is self-documenting.
- C. It signifies that the binary requires network access to execute.
- D. It suggests a possible attempt to obfuscate the code.

Answer: D

#### NEW QUESTION # 138

What characteristic feature would analysts typically NOT expect to find in packed malware?

- A. Numerous API calls in the initial code segment
- B. Anomalous section names within the executable
- C. Increased size due to added unpacking code

- Answer: D**
