Candidates are required to achieve a minimum passing score of 450 out of 800 to earn the certification. CDPSE Exam is offered in several languages, including English, Spanish, Portuguese, French, and Japanese, and can be taken at any Pearson VUE testing center worldwide.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q163-Q168):

NEW QUESTION # 163

Which of the following is the MOST important consideration when writing an organization's privacy policy?

- A. Using a standardized business taxonomy
- B. Including a development plan for personal data handling
- C. **Aligning statements to organizational practices**
- D. Ensuring acknowledgment by the organization's employees

Answer: C

Explanation:
Explanation

The most important consideration when writing an organization's privacy policy is to align the statements to the organizational practices, because this will help ensure that the policy is accurate, consistent, and transparent. A privacy policy is a document that explains how the organization collects, uses, discloses, and protects personal data from its customers, employees, partners, and other stakeholders. A privacy policy should reflect the actual data processing activities and privacy measures of the organization, as well as comply with the applicable laws and regulations. A privacy policy that is not aligned with the organizational practices may lead to confusion, mistrust, or legal liability¹².

NEW QUESTION # 164

Which of the following is the BEST way for an organization to limit potential data exposure when implementing a new application?

- A. Capture the application's authentication logs.
- B. Use only the data required by the application.
- C. Encrypt all data used by the application.
- **D. Implement a data loss prevention (DLP) system**

Answer: D

NEW QUESTION # 165

Which cloud deployment model is BEST for an organization whose main objectives are to logically isolate personal data from other tenants and adopt custom privacy controls for the data?

- A. Community cloud
- **B. Private cloud**
- C. Public cloud
- D. Hybrid cloud

Answer: B

Explanation:

A private cloud is a cloud deployment model that provides exclusive access and control to a single organization or a specific group of users within the organization. A private cloud is best for an organization whose main objectives are to logically isolate personal data from other tenants and adopt custom privacy controls for the data, as it offers the highest level of security, privacy, and customization among the cloud deployment models. A private cloud allows the organization to implement its own privacy policies, standards, and procedures for the personal data, as well as to configure the cloud infrastructure, services, and applications according to its specific needs and preferences. A private cloud also reduces the risk of data breaches, unauthorized access, or co-mingling of data from other tenants, as the personal data is stored and processed in a dedicated and isolated environment.

NEW QUESTION # 166

Which of the following describes a user's "right to be forgotten"?

- A. The individual's legal residence status has recently changed.
- B. The data is no longer required for the purpose originally collected.
- C. The individual objects despite legitimate grounds for processing.
- **D. The data is being used to comply with legal obligations or the public interest.**

Answer: D

NEW QUESTION # 167

When is the BEST time during the secure development life cycle to perform privacy threat modeling?

- A. Prior to the production release
- B. During functional verification testing

- C. When identifying business requirements
- D. Early in the design phase

Answer: D

Explanation:

The best time during the secure development life cycle to perform privacy threat modeling is early in the design phase, because this will help identify and mitigate the potential privacy risks and vulnerabilities of the system or application before they become costly or difficult to fix. Privacy threat modeling is a systematic process of analyzing the data flows, assets, actors, and scenarios of a system or application to identify and prioritize the privacy threats and countermeasures¹². Performing privacy threat modeling early in the design phase will also help ensure that privacy is built into the system or application from the start, rather than as an afterthought.
