## Salesforce Mule-Dev-202 Exam | Mule-Dev-202 Pass4sure - Ensure you Pass Mule-Dev-202: Salesforce Certified MuleSoft Hyperautomation Developer Exam

As far as the top features of ExamDiscuss Mule-Dev-202 exam questions formats are concerned, the Salesforce Mule-Dev-202 desktop practice test software and web-based practice test software both are customizable and track your performance. These Mule-Dev-202 practice tests are specifically designed to give you a real-time Mule-Dev-202 Exam environment for preparation. You can trust both Mule-Dev-202 practice test software and start preparing today. The desktop software runs on Windows computers. The web-based Mule-Dev-202 practice exam is supported by all browsers and operating systems.

## Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q28-Q33):

### NEW QUESTION # 28

Which component of Anypoint Platform is responsible for enforcing API policies?

- A. API Manager
- B. API Analytics
- **C. API Gateway**
- D. API Runtime

**Answer: C**

Explanation:

The component of Anypoint Platform responsible for enforcing API policies is the API Gateway:

API Gateway:

The API Gateway is a runtime component that enforces policies applied to APIs. It acts as an intermediary that manages API traffic, security, and performance by applying the policies configured in API Manager.

Policies such as rate limiting, security, transformation, and monitoring are enforced at the API Gateway to ensure that APIs are accessed securely and efficiently.

Anypoint Platform API Gateway Documentation

### NEW QUESTION # 29

A MuleSoft developer at AnyAirlines is tasked with creating a new API for an integration. According to best practices, what is the first step they need to perform?

- A. Create a new project in Anypoint Studio.
- B. Install a standalone Mule runtime on their local machine.
- C. Create a case in Salesforce.
- **D. Create a RAML definition in Design Center.**

**Answer: D**

Explanation:

**RAML Definition Creation:**The first step in creating a new API as per MuleSoft best practices is to create a RAML (RESTful API Modeling Language) definition in the Design Center. This step is critical as it outlines the API's structure, endpoints, methods, and data types, providing a clear blueprint for subsequent development.

Reference:MuleSoft API Design Best Practices

**Project Creation in Anypoint Studio:**Once the RAML definition is created, the next step would be to generate the API project in Anypoint Studio. This IDE allows developers to implement the API logic as defined in the RAML.

Reference:Getting Started with Anypoint Studio

**Mule Runtime Installation:**Installing Mule runtime is necessary for running and testing Mule applications locally. However, this step is secondary to defining the API's structure.

Reference:Mule Runtime Installation

**Case Creation in Salesforce:**Creating a case in Salesforce is not relevant to the API development process but may be necessary for support or project management purposes.

Reference:Salesforce Case Management

### NEW QUESTION # 30

Northern Trail Outfitters develops an API to look up manufacturer rebates. This API will be consumed internally by the website's backend and the RPA bots used by its customer service representatives.

How should this API be shared within the organization?

- A. Example assets should be published to the private Exchange.
- B. The API's RAML specification should be stored in a SharePoint repository.
- **C. The API asset should be published to the private Exchange portal.**
- D. The API asset should be published to the public Exchange portal.

**Answer: C**

Explanation:

To effectively share an API internally within an organization, publishing the API asset to the private Exchange portal is the best approach:

**Private Exchange Portal:**

The private Exchange portal within MuleSoft Anypoint Platform is designed for sharing APIs, connectors, templates, and other assets within an organization. It provides a central repository that is accessible to all relevant teams and departments.

**Access Control and Security:**

By using the private Exchange, you can control access to the API, ensuring that only authorized internal users, such as the website's backend team and customer service representatives using RPA bots, can consume it.

**Ease of Use:**

Publishing to the private Exchange makes it easy for internal teams to discover, access, and reuse the API, promoting consistency and reducing duplication of effort.

### NEW QUESTION # 31

Northern Trail Outfitters (NTO) has a complicated process that involves several departments. How should stages be used in Flow Orchestration to organize this process?

- A. Grouping steps based on the systems and tools that will be used to implement the process.
- B. Assigning individual steps to specific users or groups that interact with the process.
- C. Organizing individual steps to be run in parallel to one another throughout the process.
- **D. Grouping steps of the process based on hand-offs or key branches of the process.**

**Answer: D**

Explanation:

In Flow Orchestration, stages should be used to organize a complicated process by grouping steps based on hand-offs or key branches of the process:

Stages in Flow Orchestration:

Stages help structure the overall process by grouping related steps. Each stage can represent a major phase in the process, which might involve a transition of responsibility or a significant decision point.

Grouping by Hand-offs:

Organizing steps by hand-offs ensures that when responsibility shifts from one department to another, the transition is clear and manageable. This approach aligns with the natural flow of work across departments.

Key Branches:

Key branches in the process often represent decision points or significant changes in the workflow. Grouping steps that belong to these branches within specific stages helps in managing and tracking progress more effectively.

### NEW QUESTION # 32

AnyAirlines wants to create a new marketing campaign that sends customers special offers every month based on their accrued loyalty points. There is an existing integration for customer data using MuleSoft's API-led three-tier strategy. Loyalty information exists in an external system that can be accessed via an HTTP endpoint provided by the system, but has no current integration. The external ID used will be email address.

The desired output is a CSV file containing customers that includes only the top 10 percent of loyalty point holders.

What is the most efficient way to meet this requirement?

- A. 1. Create a Salesforce Flow that retrieves the Contact data.2. Create a Salesforce Flow that retrieves the Loyalty data.3. Create a Flow Orchestration that uses the two flows and outputs the result to a CSV file.
- B. 1. Have the MuleSoft team develop a new integration that includes a new System API to both the Customer and Loyalty systems.2. Create a Process API to output the final results.3. Create an Experience API for the business consumers to initiate the integration.
- **C. 1. Have the MuleSoft team develop a new integration that includes a System API to the Loyalty system and uses the existing Customer System API.2. Create a Process API to output the final results.3. Create an Experience API for the business consumers to initiate the integration.**
- D. 1. Create a MuleSoft Composer flow that utilizes the current Customer integration to select all customers.2. Create an additional MuleSoft Composer flow that retrieves all the Loyalty information.3. Create a MuleSoft Composer flow that combines the two previous results and outputs the top 10 percent to a CSV file.

**Answer: C**

Explanation:

Develop System API for Loyalty SystemThe first step is to develop a new System API that integrates with the Loyalty system. This API will handle communication with the external system via the provided HTTP endpoint.

Reference:MuleSoft API-led Connectivity

Utilize Existing Customer System API:Use the existing System API for customer data to retrieve necessary customer information. Combining these APIs ensures a modular approach and reuse of existing assets.

Reference:API-led Connectivity

Create Process API:Develop a Process API that combines data from both the Customer and Loyalty System APIs. This API will process the data, apply business logic to filter the top 10 percent of loyalty point holders, and format the results.

Reference: Designing Process APIs

Create Experience API: Develop an Experience API to serve the business consumers. This API will provide a user-friendly interface for initiating the integration and retrieving the results as a CSV file.

Reference: API Experience Layer

## NEW QUESTION # 33

.....

We have created a number of reports and learning functions for evaluating your proficiency for the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) exam dumps. In preparation, you can optimize Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) practice exam time and question type by utilizing our Salesforce Mule-Dev-202 Practice Test software. ExamDiscuss makes it easy to download Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) exam questions immediately after purchase.
