200-201 New Dumps Pdf & 200-201 Exam Exercise

After purchasing the 200-201 exam dumps from Actual4Labs, you will have access to three formats designed by Actual4Labs for the preparation of the Cisco 200-201 exam. These Understanding Cisco Cybersecurity Operations Fundamentals exam dumps formats will provide actual Cisco 200-201 PDF Questions to help you prepare for the Cisco 200-201 exam.

Cisco 200-201 Certification Exam, also known as Understanding Cisco Cybersecurity Operations Fundamentals, is an assessment

designed to test the skills and knowledge of individuals who are interested in pursuing a career in cybersecurity. 200-201 exam focuses on the fundamental concepts of cybersecurity operations, including security concepts, network infrastructure, cryptography, host-based analysis, and security monitoring. 200-201 Exam aims to evaluate the candidate's ability to identify, prevent, and respond to security threats in a network environment.

Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q305-Q310):

NEW QUESTION # 305
An engineer is analyzing a recent breach where confidential documents were altered and stolen by the receptionist. Further analysis shows that the threat actor connected an externa USB device to bypass security restrictions and steal data. The engineer could not find an external USB device Which piece of information must an engineer use for attribution in an investigation?

- A. external USB device
- B. receptionist and the actions performed
- C. stolen data and its criticality assessment
- D. list of security restrictions and privileges boundaries bypassed

Answer: B

Explanation:
In the context of a cybersecurity breach, attribution involves identifying the responsible party. Since the external USB device was not found, the focus shifts to the actions performed by the receptionist. Analyzing these actions can provide insights into how the breach occurred and may help in attributing the incident to the threat actor References ≔ Cisco Certified CyberOps Associate 200-201 Certification Guide

NEW QUESTION # 306
How does agentless monitoring differ from agent-based monitoring?

- A. Agentless can access the data via API. while agent-base uses a less efficient method and accesses log data through WMI.
- B. Agent-based has a possibility to locally filter and transmit only valuable data, while agentless has much higher network utilization
- C. Agent-based monitoring has a lower initial cost for deployment, while agentless monitoring requires resource-intensive deployment.
- D. Agent-based monitoring is less intrusive in gathering log data, while agentless requires open ports to fetch the logs

Answer: D

NEW QUESTION # 307
What is a difference between SOAR and SIEM?

- A. SOAR platforms are used for threat and vulnerability management, but SIEM applications are not
- B. SIEM receives information from a single platform and delivers it to a SOAR
- C. SIEM applications are used for threat and vulnerability management, but SOAR platforms are not
- D. SOAR receives information from a single platform and delivers it to a SIEM

Answer: A

Explanation:
Section: Security Concepts
Explanation

NEW QUESTION # 308
Refer to the exhibit.
A workstation downloads a malicious docx file from the Internet and a copy is sent to FTDv. The FTDv sends the file hash to FMC and the tile event is recorded what would have occurred with stronger data visibility.

- A. The traffic would have been monitored at any segment in the network.
- B. An extra level of security would have been in place
- C. Malicious traffic would have been blocked on multiple devices
- D. Detailed information about the data in real time would have been provided

Answer: D

Explanation:
With stronger data visibility, detailed information about the data in real-time is provided. This enhanced visibility allows for a more comprehensive analysis of network traffic, enabling security professionals to identify and mitigate threats more effectively. NEW QUESTION # 309
Which two elements are used for profiling a network? (Choose two.)

- A. session duration
- B. listening ports
- C. OS fingerprint
- D. running processes
- E. total throughput

Answer: A,E

Explanation:
A network profile should include some important elements, such as the following:
Total throughput - the amount of data passing from a given source to a given destination in a given period of time Session duration - the time between the establishment of a data flow and its termination Ports used - a list of TCP or UDP processes that are available to accept data Critical asset address space - the IP addresses or the logical location of essential systems or data Profiling data are data that system has gathered, these data helps for incident response and to detect incident Network profiling = throughput, sessions duration, port used, Critical Asset Address Space Host profiling = Listening ports, logged in accounts, running processes, running tasks,applications

NEW QUESTION # 310
......

If you feel nervous about the exam, then you can try the 200-201 exam dumps of us. It will help you to release your nerves. 200-201 Soft test engine can stimulate the real exam environment, if you use this version, it will help you know the procedures of the exam. In addition, 200-201 Exam Materials are verified by experienced experts, and the quality can be guaranteed. 200-201 exam dumps have both questions and answers, and they may benefit your practice.
