Learning is just a part of our life. We do not hope that you spend all your time on learning the AZ-204 certification materials. Life needs balance, and productivity gives us a sense of accomplishment and value. So our AZ-204 real exam dumps have simplified your study and alleviated your pressure from study. Also, the windows software will automatically generate a learning report when you finish your practices of the AZ-204 Real Exam dumps, which helps you to adjust your learning plan. It is crucial that you have formed a correct review method. The role of our AZ-204 test training is optimizing and monitoring your study. Sometimes you have no idea about your problems. So you need our AZ-204 real exam dumps to promote your practices.

Microsoft AZ-204 Certification is highly valued in the industry, as it demonstrates the candidate's expertise in building cloud-based solutions using Azure. Developing Solutions for Microsoft Azure certification is recognized worldwide and can open doors to new job opportunities and higher salaries. Moreover, Microsoft regularly updates its certification exams to reflect the latest industry trends and technologies, which means that certified professionals are always up-to-date with the latest developments.

AZ-204 Vce Torrent, AZ-204 Guaranteed Success

ValidVCE also offers a demo of the Microsoft AZ-204 exam product which is absolutely free. Up to 1 year of free Developing Solutions for Microsoft Azure (AZ-204) questions updates are also available if in any case the sections of the Microsoft AZ-204 Actual Test changes after your purchase. Lastly, we also offer a full refund guarantee according to terms and conditions if you do not get success in the Developing Solutions for Microsoft Azure exam after using our AZ-204 product.

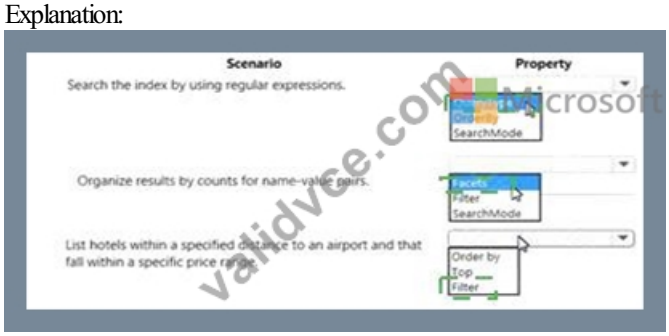
The AZ-204 exam covers a wide range of topics, including developing Azure compute solutions, developing Azure storage solutions, implementing Azure security, monitoring, troubleshooting, and optimizing Azure solutions, and connecting to and consuming Azure services and third-party services. AZ-204 exam is designed to test the developer's ability to design, develop, and implement solutions using Azure services and their knowledge of Azure development tools and technologies. AZ-204 Exam is perfect for developers who want to demonstrate their skills in developing cloud-based applications and services using Microsoft Azure.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q193-Q198):

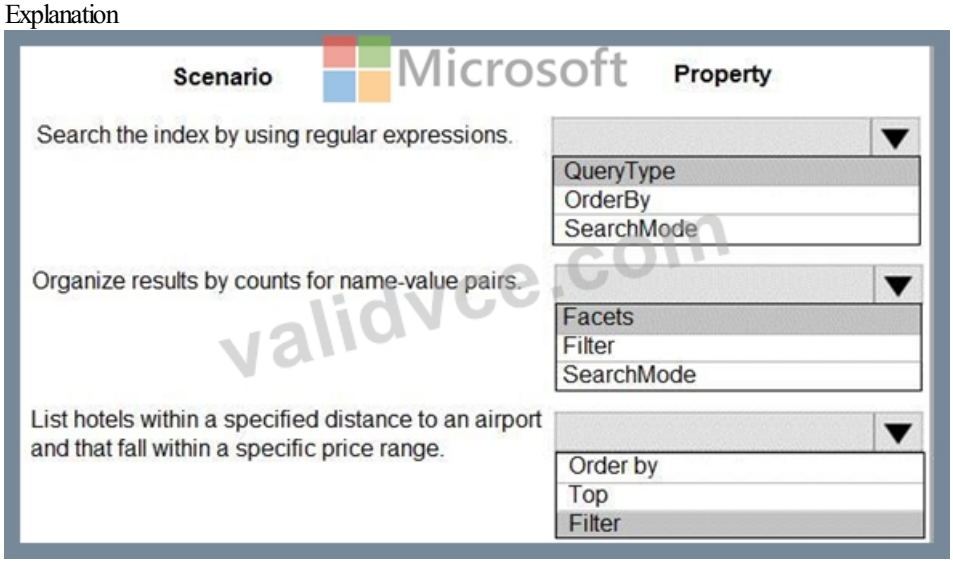
NEW QUESTION # 193
You are developing a .NET Core MVC application for customers to research hotels. The application will use Azure Search. The application will search the index by using various criteria to locate documents related to hotels. The index will include search fields for rate, a list of amenities, and distance to the nearest airport.
The application must support the following scenarios for specifying search criteria and organizing results:
* Search the index by using regular expressions.
* Organize results by counts for name-value pairs.
* List hotels within a specified distance to an airport and that fall within a specific price range.
You need to configure the SearchParameters class.
Which properties should you configure? To answer, select the appropriate options in the answer area.
NOTE Each correct selection is worth one point.

Answer:

Explanation:



Explanation



Box 1: QueryType

The SearchParameters.QueryType Property gets or sets a value that specifies the syntax of the search query.

The default is 'simple'. Use 'full' if your query uses the Lucene query syntax.

You can write queries against Azure Search based on the rich Lucene Query Parser syntax for specialized query forms: wildcard, fuzzy search, proximity search, regular expressions are a few examples.

Box 2: Facets

The facets property gets or sets the list of facet expressions to apply to the search query. Each facet expression contains a field name, optionally followed by a comma-separated list of name:value pairs.

Box 3: Filter

The Filter property gets or sets the OData $filter expression to apply to the search query.

NEW QUESTION # 194

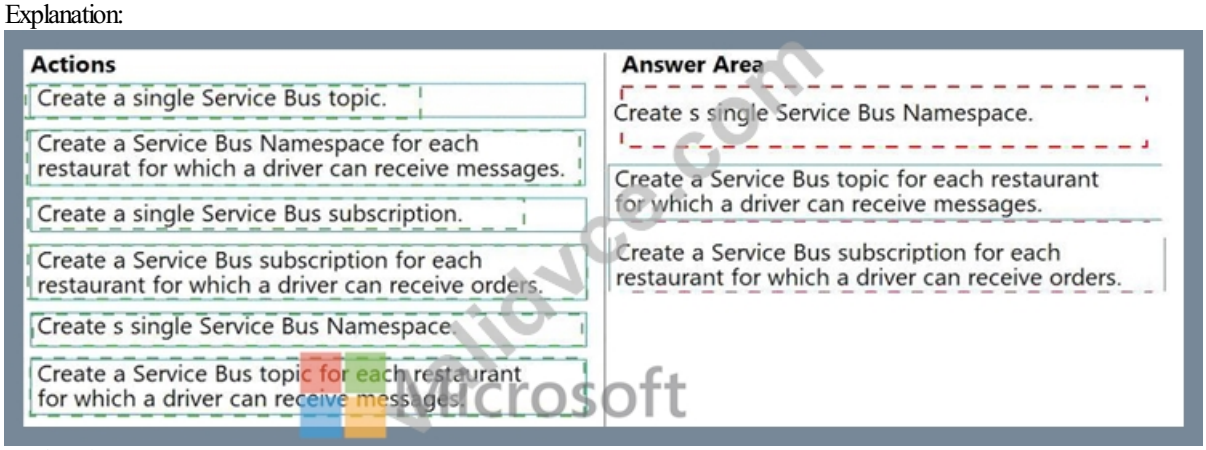
You develop software solutions for a mobile delivery service. You are developing a mobile app that users can use to order from a restaurant in their area. The app uses the following workflow:

* A driver selects the restaurants from which they will deliver orders.
* Orders are sent to all available drivers in an area.
* Only orders for the selected restaurants will appear for the driver.
* The first driver to accept an order removes it from the list of available orders.

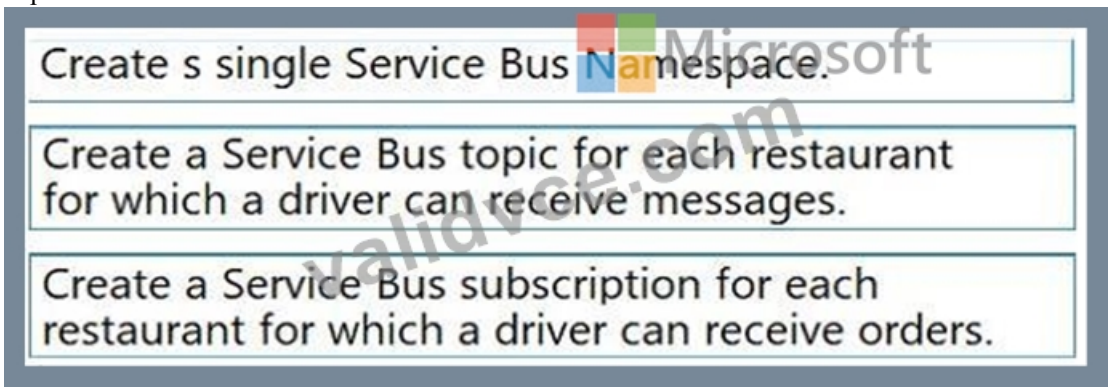
You need to implement an Azure Service Bus solution.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:



Explanation



Box 1: Create a single Service Bus Namespace
To begin using Service Bus messaging entities in Azure, you must first create a namespace with a name that is unique across Azure. A namespace provides a scoping container for addressing Service Bus resources within your application.
Box 2: Create a Service Bus Topic for each restaurant for which a driver can receive messages.
Create topics.
Box 3: Create a Service Bus subscription for each restaurant for which a driver can receive orders.
Topics can have multiple, independent subscriptions.
Reference:
https://docs.microsoft.com/en-us/azure/service-bus-messaging/service-bus-messaging-overview

NEW QUESTION # 195
You need to access data from the user claim object in the e-commerce web app.
What should you do first?

- A. Assign the Contributor RBAC role to the e-commerce web app by using the Resource Manager create role assignment API.
- B. Update the e-commerce web app to read the HTTP request header values.
- C. Write custom code to make a Microsoft Graph API call from the e-commerce web app.
- D. Using the Azure CLI, enable Cross-origin resource sharing (CORS) from the e-commerce checkout API to the e-commerce web app.

Answer: B

Explanation:
Methods to Get User Identity and Claims in a .NET Azure Functions App include:
ClaimsPrincipal from the Request Context
The ClaimsPrincipal object is also available as part of the request context and can be extracted from the HttpRequest.HttpContext.
User Claims from the Request Headers.
App Service passes user claims to the app by using special request headers.

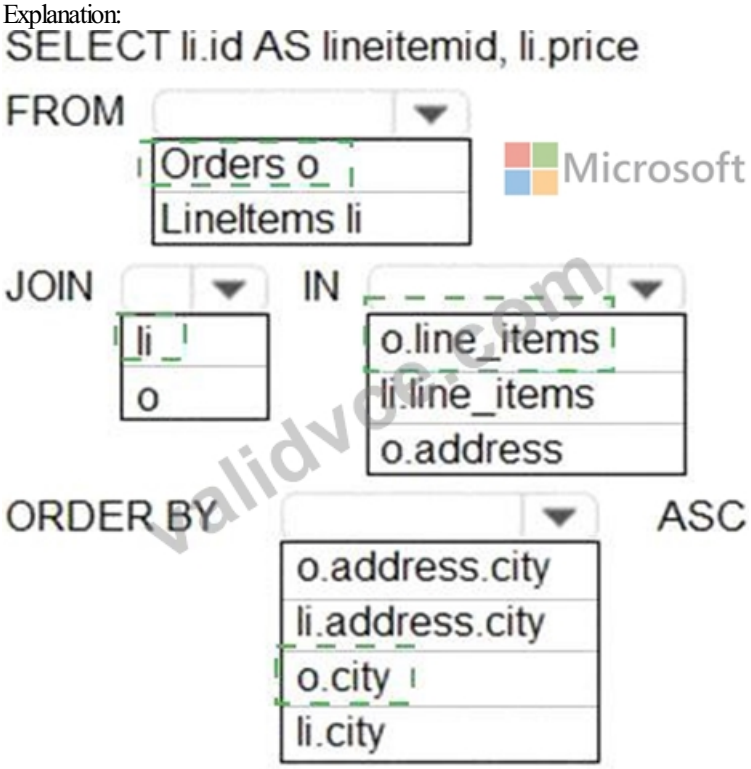
Topic 7, VanArsdel. Ltd
Current environment
Requirements
The application components must meet the following requirements:
Corporate website
* Secure the website by using SSL
* Minimize costs tor data storage and hosting.
* Implement native GitHub workflows for continuous integration and continuous deployment (CI/CO).
* Distribute the website content globally for local use.
* Implement monitoring by using Application Insights and availability web tests including SSL certificate validity and custom header value verification.
* The website must have 99.95 percent uptime.
Corporate website
The company provides a public website located at htlp://www. vanaisdelttd.com. The website consists of a React JavaScript user interface, HTML,CSS, image assets, and several APIs hosted in Azure functions.
Retail store locations
* Azure Functions must process data immediately when data is uploaded to Blob storage. Azure Functions must update Azure Cosmos D3 by using native SQL language queries.
* Audit store sale transaction information nightly to validate data, process sates financials, and reconcile inventory.
Delivery services
* Store service telemetry data in Azure Cosmos DB by using an Azure Function. Data must include an item id. the delivery vehicle license plate, vehicle package capacity, and current vehicle location coordinates.
* Store delivery driver profile information in Azure Active Directory Azure AD) by using an Azure Function called from the corporate website.
Inventory services
The company has contracted a third-party to develop an API for inventory processing that requires access to a specific blob within the retail store storage account for three months to include read-only access to the data.
Security
* All Azure Functions must centralize management and distribution of configuration data for different environments and geographies, encrypted by using a company-provided RSA-HSM key.
* Authentication and authorization must use Azure AD and services must use managed identities where possible.
Retail Store Locations
* You must perform a point-in-time restoration of the retail store location data due to an unexpected and accidental deletion of data.
* Azure Cosmos DB queries from the Azure Function exhibit high Request Unit (RU) usage and contain multiple, complex queries that exhibit high point read latency for large items as the function app is scaling.

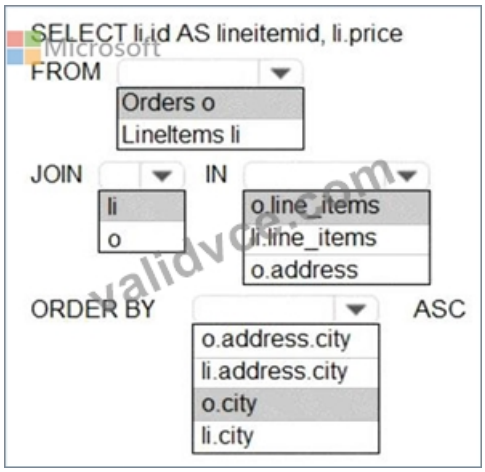
NEW QUESTION # 196
You need to retrieve all order line items from Order.json and sort the data alphabetically by the city.
How should you complete the code? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:



Explanation:



Box 1: orders o
Scenario: Order data is stored as nonrelational JSON and must be queried using SQL.
Box 2:li
Box 3: o.line_items
Box 4: o.city
The city field is in Order, not in the 2s.

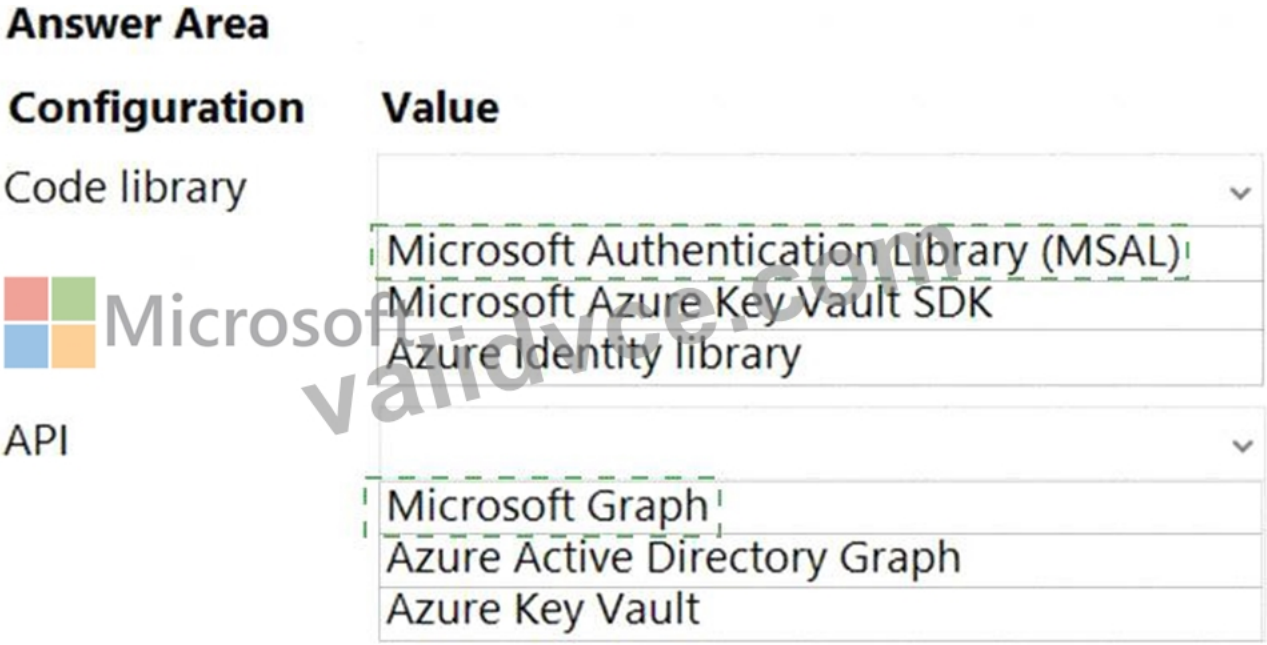
NEW QUESTION # 197
You need to implement the Azure Function for delivery driver profile information.
Which configurations should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

Configuration	Value
Code library	Microsoft Authentication Library (MSAL) Microsoft Azure Key Vault SDK Azure Identity library
API	Microsoft Graph Azure Active Directory Graph Azure Key Vault

Answer:

Explanation:



Explanation
Code Library: MSAL
API: Microsoft Graph
https://docs.microsoft.com/en-us/azure/active-directory/develop/msal-overview
