IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q68-Q73):

NEW QUESTION # 68

What has been found to undermine the public key infrastructure system?

- A. Man-in-the-middle attacks.
- B. Browsers missing a copy of the certificate authority's public key.
- C. Inability to track abandoned keys.
- **D. Disreputable certificate authorities.**

Answer: D

Explanation:

Public key infrastructure (PKI) relies heavily on the trustworthiness of certificate authorities (CAs). These CAs are responsible for issuing and verifying digital certificates. If a CA is compromised or disreputable, the entire PKI system's integrity can be undermined because the certificates it issues can no longer be trusted.

This can lead to a range of security issues, including the potential for man-in-the-middle attacks, as malicious actors could exploit compromised certificates to impersonate legitimate entities. Thus, maintaining reputable and secure CAs is critical to the PKI system's effectiveness.

NEW QUESTION # 69

Value sensitive design focuses on which of the following?

- **A. Ethics and morality.**
- B. Confidentiality and integrity.
- C. Quality and benefit.
- D. Consent and human rights.

Answer: A

Explanation:

* Option A: Quality and benefit are important in design but do not specifically capture the essence of value sensitive design, which is more about ethical considerations.

* Option B: Value sensitive design integrates considerations of ethics and morality into the technology design process, ensuring that the resulting systems align with human values.

* Option C: Confidentiality and integrity are key aspects of information security but are not the primary focus of value sensitive design.

* Option D: Consent and human rights are related to privacy and data protection but are narrower than the broader focus of ethics and morality in value sensitive design.

NEW QUESTION # 70

SCENARIO

Wesley Energy has finally made its move, acquiring the venerable oil and gas exploration firm Lancelot from its long-time owner David Wilson. As a member of the transition team, you have come to realize that Wilson's quirky nature affected even Lancelot's data practices, which are maddeningly inconsistent. "The old man hired and fired IT people like he was changing his necktie," one of Wilson's seasoned lieutenants tells you, as you identify the traces of initiatives left half complete.

For instance, while some proprietary data and personal information on clients and employees is encrypted, other sensitive information, including health information from surveillance testing of employees for toxic exposures, remains unencrypted, particularly when included within longer records with less-sensitive data. You also find that data is scattered across applications, servers and facilities in a manner that at first glance seems almost random.

Among your preliminary findings of the condition of data at Lancelot are the following:

Cloud technology is supplied by vendors around the world, including firms that you have not heard of. You are told by a former Lancelot employee that these vendors operate with divergent security requirements and protocols.

The company's proprietary recovery process for shale oil is stored on servers among a variety of less-sensitive information that can be accessed not only by scientists, but by personnel of all types at most company locations.

DES is the strongest encryption algorithm currently used for any file.

Several company facilities lack physical security controls, beyond visitor check-in, which familiar vendors often bypass.

Fixing all of this will take work, but first you need to grasp the scope of the mess and formulate a plan of action to address it.

Which procedure should be employed to identify the types and locations of data held by Wesley Energy?

- A. Data inventory.
- B. Data classification.
- C. Privacy audit.
- D. Log collection

Answer: A

Explanation:

To identify the types and locations of data held by Wesley Energy, a data inventory should be employed. A data inventory involves creating a comprehensive record of all the data held by an organization, including information about its type and location.

NEW QUESTION # 71

Revocation and reissuing of compromised credentials is impossible for which of the following authentication techniques?

- A. Personal identification number.
- B. Radio frequency identification.
- C. Picture passwords.
- D. Biometric data.

Answer: B

NEW QUESTION # 72

Which of the following is NOT relevant to a user exercising their data portability rights?

- A. Re-authentication of an account, including two-factor authentication as appropriate.
- B. Notice and consent for the downloading of data.
- C. Detection of phishing attacks against the portability interface.
- D. Validation of users with unauthenticated identifiers (e.g. IP address, physical address).

Answer: D
