## ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q94-Q99):

### NEW QUESTION # 94

Why should we use discovery process handler?

Response:

- A. Process handler can be configured to help with the situations where the parameter might contain changeable port.
- **B. All of them**
- C. It can overwrite the data gathered from process on the running process list for the discovered host.
- D. It can make sure that the data is same after restart by running a script and therefore eliminating duplicate CIs.

**Answer: B**

#### NEW QUESTION # 95

Which best describes Discovery schedule of type Configuration Item?

- A. Creates only a list of discovered IPs in both IPv4 and IPv6 formats.
- **B. Collects complete information from the scanned IP ranges and sends it to the CMDB.**
- C. Verifies Configuration Item data from the scanned IP ranges against the data in the CMDB.
- D. Directly populates records in the assets table.

**Answer: B**

Explanation:

A Discovery schedule of type Configuration Item collects complete information from the scanned IP ranges and sends it to the CMDB. This type of schedule runs a series of probes and sensors to identify and classify the devices and applications on the network, and to create or update the corresponding configuration items in the CMDB. A Discovery schedule of type Configuration Item can also run patterns to discover more details and relationships about the configuration items.

#### NEW QUESTION # 96

For what is File Based Discovery used?

- **A. To discover that file names conform to a defined naming standard**
- B. To discover file paths to recognize the signature of installed software
- C. To discover the contents of flat files such as configuration files
- D. To discover the checksum of a file and store it to track for changes

**Answer: A**

#### NEW QUESTION # 97

Which of the following choices may be global variables for steps in horizontal discovery patterns? (Choose two.)

- **A. system**
- B. baseline
- C. process
- **D. computer\_system**

**Answer: A,D**

Explanation:

Global variables are variables that are automatically available for all steps in horizontal discovery patterns.

They store information about the target CI, such as its IP address, host name, operating system, and credentials. There are two global variables that may be used for steps in horizontal discovery patterns: system and computer\_system. The system variable contains the information about the target CI's IP address, host name, and credentials. The computer\_system variable contains the information about the target CI's operating system, such as its name, version, and architecture<sup>12</sup>.

#### NEW QUESTION # 98

Which of the below choices are possible options under ACTION ON ALL in the Recommended Actions pane for an Automated Error Messages list within Discovery > Home?

Choose 2 answers

- A. View instructions
- B. Retry Discovery
- C. Make Ranges
- D. Ping IP Addresses

**Answer: A,B**

Explanation:

In the ServiceNow Discovery module, under the Recommended Actions pane for an Automated Error Messages list within Discovery > Home, the possible options under ACTION ON ALL include "View instructions" and "Retry Discovery". "View instructions" allows users to see guidance on how to address the errors, while "Retry Discovery" enables users to reinitiate the discovery process for the affected devices.

"Make Ranges" and "Ping IP Addresses" are not standard options in this context. References = ServiceNow Discovery documentation and user guides, particularly those discussing the management of automated error messages and recommended actions in Discovery.

## NEW QUESTION # 99

.....
