

Analytics-Admn-201試験番号、Analytics-Admn-201無料問題

無料でクラウドストレージから最新のJpexam Analytics-Admn-201 PDFダンプをダウンロードする：https://drive.google.com/open?id=1D_w5AvWBec_uDbGeWqulPhyd89ypBBGX

Salesforce Analytics-Admn-201認定資格試験の難しさなので、我々サイトAnalytics-Admn-201であなたに相当する認定資格試験問題集を見つけるし、本当の試験での試験問題の難しさを克服することができます。当社はSalesforce Analytics-Admn-201認定試験の最新要求にいつもでも関心を寄せて、最新かつ質高い模擬試験問題集を準備します。また、購入する前に、無料のPDF版デモをダウンロードして信頼性を確認することができます。

世界経済の急速な発展と国際的な競争の激化により、知識ベース経済の主要な地位は徐々に確立されています。多くの人が、良い仕事、Analytics-Admn-201認定、より高い生活水準を求めています。良い仕事やより高い生活水準などを手に入れたいのであれば、変化する世界に歩調を合わせ、知識を更新することが非常に重要です。まず、適切なAnalytics-Admn-201クイズ準備を取得する必要があります。Analytics-Admn-201試験に合格して証明書を取得するだけなので、まともな仕事を得て、より多くのお金を稼ぐことができます。

>> Analytics-Admn-201試験番号 <<

試験の準備方法-真実的なAnalytics-Admn-201試験番号試験-効率的なAnalytics-Admn-201無料問題

Analytics-Admn-201試験トレーニングにより、最短時間で試験に合格することができます。十分な時間がない場合、Analytics-Admn-201学習教材は本当に良い選択です。学習の過程で、Analytics-Admn-201学習教材も効率を改善できます。学習する時間が足りない場合は、Analytics-Admn-201テストガイドが空き時間を最大限に活用します。Analytics-Admn-201学習質問に合わせた専門家は、あなたに非常に適している必要があります。プロセスをより深く理解できます。すべての時間を効率的に使用して、私を信じて、あなたはあなたの夢を実現します。

Salesforce Certified Tableau Server Administrator 認定 Analytics-Admn-201 試験問題 (Q46-Q51):

質問 # 46

Which three types of data should you backup to ensure that you can restore a Tableau Server? (Choose three.)

- A. Repository data
- B. Topology data
- C. Server secrets and Repository passwords
- D. Configuration data

正解: A、C、D

解説:

Backing up Tableau Server ensures recovery from failures or migrations. A full backup includes multiple data types-let's dissect this comprehensively:

* Backup Components:

* Repository Data: PostgreSQL database with metadata (users, permissions, workbooks). Backed up via tsm maintenance backup -f<filename>.tsbak.

* Configuration Data: Server settings (e.g., ports, authentication) also in the .tsbak file.

* Server Secrets: Encryption keys, internal tokens, Repository passwords-critical for restoring functionality.

* Extracts: .hyper files in File Store (optional, separate backup).

* Option A (Server secrets and Repository passwords): Correct.

* Details: Includes encryption keys (for extracts), internal tokens (process communication), and Repository credentials. Backed up separately or stored securely (e.g., tsm security export-keys).

* Why Critical: Without these, restored data may be inaccessible or services may fail.

* Option C (Configuration data): Correct.

* Details: Ports, authentication settings, process topology-part of the .tsbak file.

* Why Critical: Restores server behavior and connectivity post-recovery.

* Option D (Repository data): Correct.

* Details: Core metadata database-also in .tsbak.

* Why Critical: Without it, all content and user data is lost.

* Option B (Topology data): Incorrect.

* Details: Topology (process distribution) is part of configuration data in the .tsbak, not a separate entity. It's not distinctly backed up as "topology data." Why This Matters: A complete backup (secrets, config, repository) ensures full restoration-missing any piece risks an unusable server.

Reference: Tableau Server Documentation - "Back Up Tableau Server Data" (https://help.tableau.com/current/server/en-us/backup_restore.htm).

質問 # 47

What command should you run to update the automatically-generated secrets that are created during a Tableau Server installation?

- A. tsm data-access caching set -r 1
- B. tsm security regenerate-internal-tokens
- C. tsm licenses refresh
- D. tsm security validate-asset-keys

正解: B

解説:

Tableau Server uses internal secrets (tokens) for secure communication between its processes (e.g., Repository, File Store). These are automatically generated during installation and can be regenerated if compromised or for security maintenance. The command to update these is:

* tsm security regenerate-internal-tokens: This regenerates the internal security tokens, ensuring all processes use the new tokens after a restart.

* Option C (tsm security regenerate-internal-tokens): Correct. This is the documented command for updating internal secrets.

* Option A (tsm data-access caching set -r 1): Incorrect. This command configures caching behavior, not security tokens.

* Option B (tsm licenses refresh): Incorrect. This refreshes license data, unrelated to internal secrets.

* Option D (tsm security validate-asset-keys): Incorrect. This validates encryption keys for assets, not internal tokens.

Reference: Tableau Server Documentation - "Regenerate Internal Tokens" (<https://help.tableau.com/current/server/en->

us/cli_security.htm#regenerate-internal-tokens).

質問 # 48

What is the minimum hardware recommendation for a single-node production installation of Tableau Server?

- A. 4-Core CPU (2.0 GHz or higher), 16 GB RAM, 50 GB free disk space
- B. 4-Core CPU (2.0 GHz or higher), 64 GB RAM, 50 GB free disk space
- C. 2-Core CPU (1.8 GHz or higher), 8 GB RAM, 15 GB free disk space
- **D. 8-Core CPU (2.0 GHz or higher), 32 GB RAM, 50 GB free disk space**

正解: D

解説:

Tableau Server's minimum hardware recommendations for a production single-node deployment ensure reliable performance for small to medium workloads. As of the latest documentation:

- * CPU: 8 cores (2.0 GHz or higher) to handle concurrent users, rendering, and background tasks.
- * RAM: 32 GB to support in-memory processing (e.g., VizQL, Data Engine) and caching.
- * Disk Space: 50 GB free for installation, logs, extracts, and temporary files.

Let's break it down:

- * Option C (8-Core CPU, 32 GB RAM, 50 GB free disk space): Correct. This matches Tableau's official minimum for production:
- * 8 cores ensure sufficient parallelism for processes like Backgrounder and VizQL.
- * 32 GB RAM supports multiple users and extract refreshes.
- * 50 GB disk space accommodates growth (initial install is ~1-2 GB, but logs and extracts expand).
- * Option A (4-Core, 16 GB RAM, 50 GB): Incorrect. Too low for production-4 cores and 16 GB RAM are below the threshold for reliable performance under load.
- * Option B (2-Core, 8 GB RAM, 15 GB): Incorrect. This is for non-production (e.g., trial) setups, insufficient for production stability.
- * Option D (4-Core, 64 GB RAM, 50 GB): Incorrect. 4 cores are inadequate, though 64 GB RAM exceeds the minimum (32 GB).

Why This Matters: Under-spec hardware can lead to slow performance, failed refreshes, or crashes in production-adhering to the minimum ensures stability.

Reference: Tableau Server Documentation - "Minimum Hardware Recommendations" (<https://help.tableau.com/current/server/en-us/requirements.htm>).

質問 # 49

You have a server that contains 16 processor cores. What is the default number of VizQL instances configured by the installer?

- A. 0
- B. 1
- **C. 2**
- D. 3

正解: C

解説:

The VizQL Server process in Tableau Server handles rendering visualizations and processing queries for users viewing dashboards or workbooks. During installation, Tableau Server automatically configures the number of VizQL instances based on the number of processor cores on the machine, following this rule:

Default VizQL instances = 2 per node, unless manually adjusted post-installation.

In multi-node setups, additional instances may be added based on core count, but the question specifies a single server with 16 cores.

The installer does not scale VizQL instances linearly with core count by default (e.g., it doesn't set 1 instance per 4 cores). Instead: For a single-node installation, the default is 2 VizQL instances, regardless of core count (assuming the minimum hardware requirements are met: 8 cores, 32 GB RAM).

Administrators can later adjust this using TSM (e.g., tsm topology set-process) based on performance needs, but the question asks for the default configured by the installer.

- Option A (4): Incorrect. Four instances might be configured manually for a 16-core server, but it's not the default.
- Option B (6): Incorrect. Six instances exceed the default for a single node.
- Option C (10): Incorrect. Ten instances are far beyond the default and would require manual configuration.
- Option D (2): Correct. The installer sets 2 VizQL instances by default on a single-node installation.

Reference: Tableau Server Documentation - "Server Process Settings" (<https://help.tableau.com/current/server/en-us/processes.htm>).

質問 # 50

What is the minimum required free hard disk space recommended for a Tableau Server installation in production?

- A. 32 GB
- B. 15 GB
- C. 64 GB
- **D. 50 GB**

正解: D

解説:

Tableau Server has specific hardware requirements for production environments to ensure stability and performance. The minimum recommended free disk space for a production installation is 50 GB. This accounts for:

- * The installation itself (approximately 1-2 GB).
- * Space for log files, temporary files, and extracts managed by the File Store and Data Engine.
- * Room for backups and operational overhead.

The full minimum hardware recommendations for a single-node production deployment are:

- * 8 CPU cores (2.0 GHz or faster).
- * 32 GB RAM.
- * 50 GB free disk space (on the system drive, typically C: on Windows).
- * Option A (32 GB): Incorrect. While 32 GB is the minimum RAM requirement, it's insufficient for disk space in production.
- * Option B (50 GB): Correct. This matches Tableau's official recommendation for production environments.
- * Option C (15 GB): Incorrect. 15 GB is the minimum for a non-production or trial installation, not production.
- * Option D (64 GB): Incorrect. While 64 GB exceeds the minimum, it's not the specified requirement- 50 GB is sufficient.
