Pass Guaranteed 2026 Sharing-and-Visibility-Architect: High Hit-Rate Salesforce Certified Sharing and Visibility Architect Valid Test Test

We understand the difficulty of finding the latest and accurate Sharing-and-Visibility-Architect questions. In today's competitive world, it is essential to prepare with the most probable Salesforce in Sharing-and-Visibility-Architect exam dumps to stay ahead of the competition. That's why we have created our updated Salesforce Sharing-and-Visibility-Architect Questions, which will help you to clear the Salesforce Certified Sharing and Visibility Architect (Sharing-and-Visibility-Architect) exam in one go.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q59-Q64):

NEW QUESTION # 59
Universal Container has a set of Account management users that should only see accounts once the account becomes a customer.

The type field on the Account identifies whether the account is a prospect, customer, partner, or other. Which two methods could an Architect use to enable this sharing requirement, assuming a private sharing model for accounts? Choose two:

- A. Create an account sharing rule that shares all accounts owned by sales to be shared with account management roles and subordinates
- B. Create a criteria-based sharing rule that shares the account to the account management group when the type is customer
- C. Create a public list view, where accounts of type customer are included and share the list view with account management public group
- D. Institute a business process that calls for the account manager to be added to the account team once the account becomes a customer

Answer: B,D

NEW QUESTION # 60

Universal Containers (UC) enables customers to manage issues using a customer Community license. The Case external organization-wide default is set to Private. Currently community users can only see cases they created.
What can be done to allow community users to see all cases for their account?

- A. Write an Apex class to create manual shares for these users.
- B. Ensure the criteria-based sharing rule applies to all users.
- C. Upgrade the licenses to Customer Community Plus.
- D. Create a sharing set for these customers.

Answer: D

Explanation:
Explanation
A sharing set is the best way to share cases with customer community users based on a common account. Sharing sets are available for Customer Community licenses and can grant access to related records using predefined criteria1. Option A is incorrect, since writing an Apex class to create manual shares for these users would be complex and unnecessary. Option B is incorrect, since criteria-based sharing rules are not available for customer community users. Option D is incorrect, since upgrading the licenses to Customer Community Plus would be costly and not required in this scenario

NEW QUESTION # 61

The Collections department at Universal Containers uses Salesforce to track its efforts. All Invoices and Invoice Line Items are stored in Salesforce. Invoice Line Item object details, such as Quantity and Extended Amount, should be summarized at the Invoice Object level, and all users who can see a given invoice should always see all invoice line items. Without leveraging Apex code, how should an Architect create the relationship between the Invoice object and the Invoice Line Item Object?

- A. The Invoice Object should have an inner joint to the Invoice Line Item Object
- B. The Invoice Line Item Object should have a Master-Detail to the Invoice Object
- C. The Invoice object should have a Master-Detail to the Invoice Line Item Object
- D. The Invoice Line Item Object should have a Lookup to the Invoice Object

Answer: B

Explanation:
Explanation
A master-detail relationship is a type of relationship between two objects where the master object controls certain behaviors of the detail object, such as security and deletion. In this case, the Invoice Line Item Object should have a master-detail relationship to the Invoice Object, so that3:
The Invoice Line Item records are deleted when the parent Invoice record is deleted.
The Invoice Line Item records inherit the sharing and security settings of the parent Invoice record.
The Invoice Line Item fields can be rolled up to calculate sums, averages, etc. on the parent Invoice record.

NEW QUESTION # 62

Universal Containers (UC) operates worldwide, with offices in more than 100 regions in 10 different countries, and has established a very complex Role Hierarchy to control data visibility. In the new fiscal year, UC is planning to reorganize the roles and reassign

account owners.
Which feature should an architect recommend to avoid problems with this operation?

- A. Parallel Sharing Rule recalculation
- B. Partition data using Divisions
- C. Skinny table

Answer: A

NEW QUESTION # 63
Universal Containers' organization wide-defaults model is private for the Account object. A sales repeats to opportunity records.
Which level of access will the sales rep have to the related account record?

- A. No access
- B. Read/Create access
- C. Read-only access
- D. Read/Create/Edit access

Answer: C

Explanation:
Explanation
The sales rep will have read-only access to the related account record. This is because the organization-wide default for the account object is private, which means that users can only access the accounts that they own or are shared with them. However, when a user has access to an opportunity, they also have implicit read-only access to the account associated with that opportunity1. This is called implicit sharing and it allows users to view the parent records of the child records they own or can access2. Therefore, the sales rep can view the account record related to the opportunity, but cannot create, edit, or delete it.

NEW QUESTION # 64
