## Reliable EAEP2201 Real Exam | EAEP2201 Valid Braindumps Book

Our EAEP2201 study materials will be very useful for all people to improve their learning efficiency. If you do all things with efficient, you will have a promotion easily. If you want to spend less time on preparing for your EAEP2201 exam, if you want to pass your EAEP2201 exam and get the certification in a short time, our EAEP2201 Study Materials will be your best choice to help you achieve your dream. Only studying with our EAEP2201 exam questions for 20 to 30 hours, you will be able to pass the EAEP2201 exam with confidence.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q43-

## Q48):

### NEW QUESTION # 43

An organization is configuring ArcGIS Enterprise. They want to enable a single sign-on experience for users using their existing SAML identity provider.

What action should the organization perform?

- A. Register the identity provider as a web-tier authenticator
- B. Configure ArcGIS Web Adaptor to use Integrated Windows Authentication
- C. Register the portal's service provider metadata with the identity provider
- D. Set up Lightweight Directory Access Protocol with portal-tier authentication

**Answer: C**

Explanation:

To enable SAML-based SSO, the ArcGIS Enterprise portal acts as the Service Provider (SP). To link it to an Identity Provider (IdP), you must register the portal's SP metadata with the IdP and configure the portal to trust it.

From Esri's documentation:

"To complete SAML configuration, register the portal's SAML service provider metadata with your organization's identity provider, then configure the portal with the IdP metadata."

\* Option A is for IWA (Kerberos), not SAML.

\* Option C refers to LDAP but doesn't configure SAML or SSO.

\* Option D is not a valid standalone action for SAML integration.

Reference: ArcGIS Enterprise - Configuring SAML Identity Providers for Single Sign-On

### NEW QUESTION # 44

A GIS administrator must configure ArcGIS Server so that only specific groups and roles from the identity store can administer it. Which action should the administrator perform?

- A. Configure role-based access through the ArcGIS Server Manager
- B. Define the shared key used to generate an ArcGIS token
- C. Use a group-managed service account to administer the server
- D. Disable the primary administrator account

**Answer: D**

Explanation:

The primary site administrator account in ArcGIS Server is a built-in account that bypasses external identity store configurations. To ensure only users from a configured identity store (e.g., Active Directory) can administer the site, the primary site admin account must be disabled after alternative administrative access has been confirmed.

From ArcGIS Server documentation:

"After you configure your ArcGIS Server to use users and roles from an identity store (LDAP or Active Directory), you can disable the primary site administrator account to prevent bypassing the identity store."

\* Option B relates to token security, not access control.

\* Option C is about running the service securely, not defining user permissions.

Reference: ArcGIS Enterprise - Managing Access Using Identity Stores and Disabling the Primary Site Administrator Account

### NEW QUESTION # 45

A GIS administrator receives reports of slow-performing services and notices that disk space is filling up after recent troubleshooting sessions.

In those sessions, the following tasks were performed:

- \* Services added to the shared instance pool
- \* Log retention settings reduced
- \* Log level set to Debug
- \* ArcGIS Server machine restarted
- \* An additional ArcGIS Server site federated

What is causing this slow performance?

- A. Federating the additional ArcGIS Server site

- B. Additional services in the shared instance pool
- C. Restarting ArcGIS Server
- D. Adjusting the log level to Debug

**Answer: B**

#### NEW QUESTION # 46

ArcGIS Server is installed with its Web Adaptor on the same server. The configuration is as follows:

- \* ArcGIS Server is federated with Portal for ArcGIS
- \* Portal is set up to use Integrated Windows Authentication
- \* The environment was set up using a domain certificate
- \* The attempted login account is a Windows account with admin privileges A GIS administrator tries to connect to ArcGIS Server Manager through ArcGIS Web Adaptor but the connection fails. Why did the connection fail?

- A. The Web Adaptor was not set to allow administrative access to the server
- B. The connection must be made with an internal admin account and not a Windows account
- C. The certificate must come from a valid Certificate Authority and not a Domain Certificate Authority

**Answer: A**

Explanation:

When using a Web Adaptor to access ArcGIS Server Manager, administrative access must be explicitly enabled during Web Adaptor configuration. If this setting is not enabled, even valid administrator accounts (including Windows accounts with elevated privileges) will be unable to access ArcGIS Server Manager via the Web Adaptor.

This is a common configuration oversight. The federation, IWA setup, and domain certificate are not the causes here. A domain certificate is valid within trusted enterprise networks, and Windows accounts can access services through IWA once configured correctly.

Reference Source: ArcGIS Enterprise documentation - Enabling administrative access for Web Adaptor

#### NEW QUESTION # 47

Multiple users report that a map service is experiencing negative performance. Upon review of ArcGIS Monitor data, the GIS analyst finds the following:

- \* The minimum number of instances is 2 and the maximum is 8 for that service.
- \* The data is in a publication Enterprise Geodatabase with no system usage in excess of 50%.
- \* At the p75 level of requests, the map service time is 10 times longer than the service time at the p25 level.
- \* The number of instances in use at the p50 level is 8.
- \* The maximum % of physical memory in use is 40%, and the maximum % of virtual memory in use is 44% on the ArcGIS Server.
- \* The maximum % CPU utilization observed is 53%.

What is causing the issue?

- A. The client is an Android device, and the ArcGIS Server is a Linux virtual machine.
- B. The network connection between the database server and ArcGIS Server is saturated.
- C. The maximum instance setting is too low for the demand on the underperforming map service.

**Answer: B**

#### NEW QUESTION # 48

.....

The EAEP2201 Certification Exam is one of the top-rated and career-oriented certificates that are designed to validate an Esri professional's skills and knowledge level. These Enterprise Administration Professional 2201 (EAEP2201) practice questions have been inspiring those who want to prove their expertise with the industrial-recognized credential. By cracking it you can gain several personal and professional benefits.
