Our PDII test guide keep pace with contemporary talent development and makes every learner fit in the needs of the society. There is no doubt that our PDII latest question can be your first choice for your relevant knowledge accumulation and ability enhancement. Moreover, PDII exam questions have been expanded capabilities through partnership with a network of reliable local companies in distribution, software and product referencing for a better development. That helping you pass the PDII Exam with our PDII latest question successfully has been given priority to our agenda.

Salesforce PDII (Salesforce Certified Platform Developer II) certification exam is designed for experienced Salesforce developers who have a solid understanding of Apex programming language, Visualforce and Lightning Components. Platform Developer II certification validates a developer's skills in building complex business logic and interfaces on the Salesforce platform. The PDII Certification Exam is the second level of Salesforce developer certification after the Salesforce Certified Platform Developer I (PD1) exam. It is a challenging exam that requires extensive hands-on experience and knowledge of Salesforce development best practices.

## Free PDF Quiz Trustable Salesforce - PDII Latest Cram Materials

For candidates who want to buy PDII exam materials online, they may have the concern of the privacy. We respect personal information of you. If you buy PDII test materials from us, your personal information such as your email address and name will be

protected well. Once the order finishes, your personal information will be concealed. Moreover, PDII Exam Dumps cover most of knowledge points for the exam, and it will be enough for you to pass the exam just one time. In order to strengthen your confidence for PDII exam braindumps, we are pass guarantee and money back guarantee.

Salesforce PDII certification is highly valued in the industry and is recognized by employers as a mark of excellence in Salesforce development. Platform Developer II certification provides a competitive edge to developers looking to advance their careers in the Salesforce ecosystem. Certified developers are highly sought after by businesses looking to build or maintain custom applications on the Salesforce platform.

Preparing for the Salesforce PDII Certification Exam requires a thorough understanding of the Salesforce platform and its advanced capabilities. Candidates should have experience in developing complex customizations, designing and implementing security models, and integrating Salesforce with external systems. Salesforce provides a variety of resources to help candidates prepare for the exam, including online courses, study guides, and practice exams.

## Salesforce Platform Developer II Sample Questions (Q24-Q29):

### NEW QUESTION # 24

A query using OR between a Date and a RecordType is performing poorly in a Large Data Volume environment. How can the developer optimize this?

- A. Use the Database.querySelector method to retrieve the accounts.
- B. Create a formula field to combine the CreatedDate and RecordType value, then filter based on the formula.
- C. Break down the query into two individual queries and join the two result sets.
- D. Annotate the method with the @Future annotation.

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation:

In SOQL, using the OR operator often prevents the Query Optimizer from using indexes effectively, especially if the fields involve different types of data. This is known as a "non-selective" query structure in LDV environments.

By breaking the query into two separate SOQL statements (Option A), the developer allows each query to be evaluated independently.

\* SELECT ... FROM Account WHERE CreatedDate = :thisDate (Uses the standard index on CreatedDate).

\* SELECT ... FROM Account WHERE RecordTypeId = :goldenRT (Uses the standard index on RecordTypeId).

The developer can then combine the results into a Map<Id, Account> to ensure uniqueness (preventing duplicates if a record meets both criteria). This approach ensures both queries are "selective" and run much faster than a single query with an OR filter.

Option D is a common anti-pattern because formulas are generally not indexed unless they are "deterministic" and a custom index is requested from Salesforce support; even then, filtering on formulas is often slower than direct field filters. Option B and C do not address the underlying database performance issue.

### NEW QUESTION # 25

Consider the below trigger intended to assign the Account to the manager of the Account's region:

□ Which two changes should a developer make in this trigger to adhere to best practices?

Choose 2 answers

- A. □
- B. □
- C. □
- D. □

**Answer: B,C**

Explanation:

The best practices for writing triggers in Salesforce include bulkifying your code to handle multiple records efficiently and reducing the number of SOQL queries, especially within loops, to avoid hitting governor limits.

\* Option B is correct because moving the SOQL query outside of the for loop is essential to bulkify the trigger. Performing a query within a loop can cause a SOQL governor limit to be reached if the trigger is processing many records. The best practice is to collect all necessary data before the loop starts and then process it within the loop.

\* Option C is correct as well, because using a Map to cache the results of a SOQL query by Id is another way to bulkify the code.

This allows you to query all the necessary data once and then access it efficiently in memory, avoiding repeated queries.

\* Option A is incorrect because adding `isExecuting` before the update doesn't address any best practices related to bulkification or SOQL query optimization.

\* Option D is incorrect because the last line should not be removed if the developer intends to perform DML on the `accountList`. However, this line should be outside of the loop and is unnecessary if the trigger context is 'before insert' or 'before update', since in those contexts, changes to records in Trigger.

new are implicitly saved without the need for explicit DML.

### NEW QUESTION # 26

A developer receives the exception 'SOQL query not selective enough' when performing a query on an object with a large amount of data.

Which step should be taken to resolve the issue?

- A. Perform the SOQL query via a call to the REST API
- **B. Use an ID in the WHERE clause of the SOQL query**
- C. Perform the SOQL query as part of a FOR loop
- D. Move the SOQL query to within an asynchronous process

**Answer: B**

Explanation:

Explanation/Reference: <https://salesforce.stackexchange.com/questions/194897/system-queryexception-non-selective-query-against-large-object-type-more-than>

### NEW QUESTION # 27

A custom Aura component, `AddressValidation.cmp`, exists in the system. The Salesforce admin for the organization is unable to find and select the component while creating a quick action for the Account sObject.

What should the developer do to ensure that `AddressValidation.cmp` can be selected when creating a quick action?

- A. Ensure the component implements the `force:hasRecordedId` interface.
- **B. Ensure the component implements the `force:lightningQuickAction` interface.**
- C. Ensure the component implements the `lightning:actionOverride` interface.
- D. Ensure the access attribute of the `aura:component` tag is `st t Global`.

**Answer: B**

### NEW QUESTION # 28

Refer to the code segment above.

When following best practices for writing Apex triggers, which two lines are wrong or cause for concern?

Choose 2 answers

- A. Line 11
- **B. Lines 6**
- **C. Line 20**
- D. Line 16

**Answer: B,C**
