GARP Sustainability and Climate Risk Sample Questions (Q91-Q96):

NEW QUESTION # 91

A multinational food and beverage corporation has growing concerns that CO₂ and other GHGs in the atmosphere have a negative effect on agricultural productivity. The corporation is subject to higher costs and scarce availability for commodities necessary for its supply chain.

The corporation will disclose this scenario under which climate-related risk type?

- **A. Chronic**
- B. Market
- C. Resilience
- D. Resource efficiency

Answer: A

NEW QUESTION # 92

A global investment bank expands its risk department to include climate risk assessment. Senior management directs the department to implement approaches for evaluating how climate change affects traditional risk types. A risk manager recommends risk metrics for key risk types that measure physical and transition risk impacts.

To measure credit risk, which metric should the analyst recommend?

- **A. Level of company preparedness**
- B. Loan-to-deposit ratio
- C. Loss given default
- D. Bid-ask spread

Answer: A

NEW QUESTION # 93

A large country joins the Paris Agreement and directs the national environmental department to disseminate new policies and goals to relevant federal agencies. Most agencies are familiar with past climate agreement principles and protocols but not those of the Paris Agreement.

The environmental department should educate federal agencies on what feature of the Paris Agreement?

- **A. Voluntary national climate targets updated on a regular basis**
- B. Strategies for developing countries to advance mitigation plans
- C. Differentiated mitigation responsibilities according to national capabilities
- D. Investment in clean energy projects in exchange for emissions credits

Answer: A

NEW QUESTION # 94

A German automotive manufacturer expands its EV line to comply with tightening emission regulations in key European markets. The firm conducts transition risk scenario analysis to evaluate financial and operational exposure to policy changes, carbon pricing, and market shifts. Which transition risk input did the firm most likely use while conducting the scenario analysis?

- **A. Emission trajectory data to estimate carbon pricing impacts on production costs.**
- B. Historical weather patterns to model production site vulnerabilities.
- C. Consumer sentiment data to forecast short-term EV market demand fluctuations.
- D. Supplier network maps to assess climate-driven supply chain disruptions.

Answer: A

NEW QUESTION # 95
