

DAA-C01 New Braindumps Free | Latest Braindumps DAA-C01 Ebook

BONUS!!! Download part of ExamBoosts DAA-C01 dumps for free: <https://drive.google.com/open?id=1hVCzCr-jmJPBITiKyG1nh3EGber-nof>

ExamBoosts's senior team of experts has developed training materials for Snowflake DAA-C01 exam. Through ExamBoosts's training and learning passing Snowflake certification DAA-C01 exam will be very simple. ExamBoosts can 100% guarantee you pass your first time to participate in the Snowflake Certification DAA-C01 Exam successfully. And you will find that our practice questions will appear in your actual exam. When you choose our help, ExamBoosts can not only give you the accurate and comprehensive examination materials, but also give you a year free update service.

As we know that thousands of people put a premium on obtaining DAA-C01 certifications to prove their ability. With the difficulties and inconveniences existing for many groups of people like white-collar worker, getting a DAA-C01 certification may be draining. Therefore, choosing a proper DAA-C01 exam guide can pave the path for you which is also conducive to gain the certification efficiently. So why should people choose us? Because the high pass rate of our DAA-C01 Latest Practice Materials is more than 98% and you will pass the DAA-C01 exam easily to get the dreaming certification.

Newest DAA-C01 New Braindumps Free | Amazing Pass Rate For DAA-C01: SnowPro Advanced: Data Analyst Certification Exam | Perfect Latest Braindumps DAA-C01 Ebook

Do you want to pass your exam just one time? If you do, then you can choose us, we can help you pass the exam just one time. With experienced experts to compile and verify DAA-C01 training materials, the quality can be guaranteed. We also pass guarantee and money back guarantee if you fail to pass the exam. You can obtain the download link and password for DAA-C01 Exam Dumps within ten minutes, so that you can start your learning immediately. We have online and offline service, and the staff possess the professional knowledge for DAA-C01 exam dumps, if you have any questions, you can have a conversation with us.

Snowflake SnowPro Advanced: Data Analyst Certification Exam Sample Questions (Q119-Q124):

NEW QUESTION # 119

You are responsible for maintaining a dashboard that visualizes sales data'. The dashboard relies on a Snowflake view named 'SALES SUMMARY'. Users have reported slow refresh times, especially when filtering by date. The 'SALES SUMMARY' view is defined as follows:

```
CREATE OR REPLACE VIEW SALES_SUMMARY AS
SELECT
    DATE,
    REGION,
    PRODUCT_CATEGORY,
    SUM(SALES_AMOUNT) AS TOTAL_SALES,
    AVG(DISCOUNT) AS AVERAGE_DISCOUNT
FROM
    SALES_TRANSACTIONS
WHERE
    DATE >= DATEADD(day, -365, CURRENT_DATE())
GROUP BY
    DATE, REGION, PRODUCT_CATEGORY;
```

Which of the following actions could significantly improve the dashboard's performance when filtering by date, assuming 'SALES_TRANSACTIONS' table is large?

- A. Partition the 'SALES_TRANSACTIONS' table by the DATE column.
- B. Create a search optimization policy on the DATE column of the SALES_TRANSACTIONS table.
- C. Add a 'ORDER BY DATE' clause to the 'SALES_SUMMARY' view definition.
- **D. create a clustering key on the DATE column in the 'SALES_TRANSACTIONS' table.**
- E. Create a materialized view on top of

Answer: D

Explanation:

Clustering the 'SALES_TRANSACTIONS' table by the DATE column is the most effective solution. Snowflake uses micro-partitioning, and clustering helps to logically group similar data together within micro-partitions. When filtering by DATE, Snowflake can then efficiently prune micro-partitions that do not contain relevant data, significantly reducing the amount of data scanned. Materialized views (A) can help but need to be maintained and add complexity. Search optimization on DATE can help but it's not the intended use case, as DATE is a range based column (B). Ordering the results (C) doesn't affect query performance significantly. Partitioning is not directly supported in Snowflake. Clustering is the correct approach.

NEW QUESTION # 120

A healthcare organization uses Snowflake to store patient data and needs to create a dashboard to monitor key performance indicators (KPIs) such as patient readmission rates, average length of stay, and patient satisfaction scores. The dashboard should allow analysts to filter data by hospital, department, and time period. Considering data governance and security best practices, which of the following approaches should you implement to ensure that analysts only have access to the data relevant to their roles and responsibilities, while also optimizing dashboard performance and maintainability? Choose all that apply.

- **A. Create separate Snowflake roles for different analyst groups (e.g., hospital analysts, department analysts) and grant each role access only to the specific views or tables containing the data they need. Apply row-level security policies to filter data based on the user's role.**
- B. Grant all analysts full access to the entire patient data warehouse and rely on the dashboard's built-in filtering capabilities to restrict data visibility.
- **C. Implement data masking techniques to redact sensitive patient information (e.g., names, addresses) within the dashboard visualizations. Ensure that data masking policies are applied consistently across all dashboards and reports.**
- **D. Create a set of stored procedures that encapsulate the logic for retrieving and aggregating the KPI data. Grant analysts execute privileges on these stored procedures, but not direct access to the underlying tables.**
- E. Build a single view that joins all necessary tables and use the view to power the dashboards. Apply role-based access control to the view.

Answer: A,C,D

Explanation:

Option A enforces role-based access control at the data layer, preventing unauthorized access. Option C provides a controlled interface for data access, enhancing security and simplifying data governance. Option D protects sensitive data within the dashboard. Granting full access (B) violates security principles. Single view can become unmanageable.

NEW QUESTION # 121

You have a table 'ORDERS' that stores customer order information. Due to a faulty ETL process, incorrect discount values were applied to some orders yesterday. You need to correct these discount values while ensuring that you can revert to the original data if necessary. Select all the valid actions to mitigate this situation using Snowflake's Time Travel and Cloning features.

- A. Create a clone of the 'ORDERS' table BEFORE applying the corrections, allowing you to revert to the original data by cloning the backup back if needed.
- B. Update the discount values directly in the 'ORDERS' table after verifying the incorrect records, relying solely on Snowflake's data retention for recovery.
- C. Create a temporary table to store the original incorrect discount values before applying the corrections, then updating the 'ORDERS' table.
- D. Use Time Travel to query the 'ORDERS' table as it existed BEFORE the faulty ETL process, then use this data to correct the discount values in a separate update statement.
- E. Create a backup table with the structure and all the records by using 'create table orders_backup as select from orders'.

Answer: A,D

Explanation:

Options A and E are the most reliable and efficient. Cloning the table (A) before the correction provides a complete, point-in-time backup that can be easily restored. Using Time Travel (E) allows you to query the historical data to identify the correct values and apply targeted updates. B is risky without a backup, as unforeseen issues might prevent successful recovery within the retention period. While C is technically feasible, it is less robust and adds complexity compared to a full clone or Time Travel. D is same as C but with more data, but less robust and adds complexity compared to a full clone or Time Travel. Creating the temp table doesn't give you the benefit of time travel, so doesn't make sense.

NEW QUESTION # 122

A retail company is experiencing a significant drop in sales for a specific product category (Electronics) in the Mountain region. You need to investigate this issue and present your findings in a dashboard using Snowflake and a BI tool. You have access to the following data: sales data, customer demographics, marketing campaign data, and regional economic indicators. Which of the following visualization techniques would be MOST effective in identifying the root cause and presenting actionable insights?

- A. A geographical map (choropleth) showing sales performance for the Electronics category, overlaid with a scatter plot showing customer density by region, and drill-down capabilities to view individual transaction data.
- B. A line chart showing the trend of total sales for all product categories across all regions over time.
- C. A combination of a time series line chart visualizing Electronics sales in the Mountain region alongside a bar chart showing the correlation between marketing spend in that region and sales, along with a table allowing filtering on customer demographics.
- D. A simple bar chart comparing total sales across all regions for the Electronics category.
- E. A pie chart showing the percentage contribution of each sub-category within Electronics to total sales.

Answer: C

Explanation:

Option E provides the most comprehensive approach by combining time series analysis to understand the sales decline trend, correlation analysis with marketing spend to see its impact, and demographic filtering to understand customer behavior in the Mountain region. Option B is good but lacks the temporal trend. Option A is too simplistic. Options C and D do not directly address the specific problem of the sales decline in the Mountain region for Electronics.

NEW QUESTION # 123

When maintaining reports and dashboards, why is it crucial to configure subscriptions and updates?

- A. Configuring these features hampers dashboard usability.
- B. They limit data accessibility for effective dashboard usage.

- C. Subscriptions and updates ensure timely information delivery.
- D. They complicate dashboard management without any added benefits.

Answer: C

Explanation:

Subscriptions and updates ensure timely information delivery, a crucial aspect of maintaining reports and dashboards.

NEW QUESTION # 124

.....

Now in such society with a galaxy of talents, stabilizing your job position is the best survival method. But stabilizing job position is not so easy. When others are fighting to improve their vocational ability, if you still making no progress and take things as they are, then you will be eliminated. In order to stabilize your job position, you need to constantly improve your DAA-C01 professional ability and keep up with the pace of others to let you not fall far behind others.
