100% Pass Quiz 2026 Salesforce PDI: Platform Developer I (PDI) High Hit-Rate Latest Test Preparation

There are three versions of our PDI exam questions: the PDF, Software and APP online. Now I want to introduce the online version of our PDI learning guide to you. The most advantage of the online version is that this version can support all electronica equipment. If you choose the online version of our PDI Study Materials, you can use our products by your any electronica equipment. We believe it will be very convenient for you, such as IPAD, phone and laptop.

Salesforce Platform Developer I (PDI) Sample Questions (Q140-Q145):

NEW QUESTION # 140

Which three statements are accurate about debug logs?
Choose 3 answers

- A. Debug log levels are cumulative, where FINE log level includes all events logged at the DEBUG, INFO, WARN, and ERROR levels.
- B. A System debug logs are retained for 24 hours.
- C. Only the 20 most recent debug logs for a user are kept.
- D. Debug logs can be set for specific users, classes, and triggers.
- E. The maximum size of 3 debug log is 5 MB.

Answer: A,B,C

Explanation:

The accurate statements about debug logs are:

Option A: System debug logs are retained for 24 hours.

Reference:

"Debug logs are retained for 24 hours. After that, they're deleted."

- Salesforce Help: View Debug Logs

Option B: Only the 20 most recent debug logs for a user are kept.

"A maximum of 20 debug logs are retained for each user. If there are already 20 logs, the oldest log is overwritten."

- Salesforce Help: Log Limits

Option C: Debug log levels are cumulative, where FINE log level includes all events logged at the DEBUG, INFO, WARN, and ERROR levels.

"Each log level includes all events with higher severities. For example, the DEBUG level includes ERROR, WARN, and INFO events."

- Salesforce Developer Guide: Trace Flags

Why Other Options Are Incorrect:

Option D: While you can set debug logs for specific users, you cannot set them directly for specific classes and triggers. Instead, you use trace flags associated with users, Apex classes, or Apex triggers.

Option E: The maximum size of a debug log is 20 MB, not 5 MB.

"When the debug log exceeds the 20 MB maximum size, Salesforce truncates the log. Truncated logs end with a message similar to '... truncated'."

- Salesforce Help: Debug Log Limits

NEW QUESTION # 141

A reviewer is required to enter a reason in the comments field only when a candidate is recommended to be hired. Which action can a developer take to enforce this requirement?

- A. Create a formula field.
- B. Create a required comments field.
- **C. Create a validation rule.**
- D. Create a required Visualforce component.

Answer: C

NEW QUESTION # 142

What are three characteristics of change set deployments?

Choose 3 answers

- A. Change sets can deploy custom settings data.
- B. Sending a change set between two orgs requires a deployment connection.
- **C. Deployment is done in a one-way, single transaction.**
- **D. Change sets can only be used between related organizations.**
- **E. Change sets can be used to transfer records.**

Answer: C,D,E

NEW QUESTION # 143

Management asked for opportunities to be automatically created for accounts with annual revenue greater than \$1, 000,000. A developer created the following trigger on the Account object to satisfy this requirement.

```
for (Account a : Trigger.new) {  
    if (a.AnnualRevenue > 1000000) {  
        List<Opportunity> oppList = [SELECT Id FROM Opportunity WHERE AccountId = :a.Id]; if (oppList.size() == 0) { Opportunity  
        oppty = new Opportunity(Name = a.Name, StageName = 'Prospecting', CloseDate = System  
        today().addDays(30));  
        insert oppty;  
    }  
}
```

```
}  
}  
}
```

Users are able to update the account records via the UI and can see an opportunity created for high annual revenue accounts. However, when the administrator tries to upload a list of 179 accounts using Data Loader, it fails with system, Exception errors. Which two actions should the developer take to fix the code segment shown above?
Choose 2. answers

- A. Query for existing opportunities outside the for loop.
- B. Move the DML that saves opportunities outside the for loop.
- C. Use Database query to query the opportunities.
- D. Check if all the required fields for Opportunity are being added on creation.

Answer: A,B

Explanation:

This is a classic bulkification problem, covered under "Apex Development Best Practices" in the PDI guide.

Reference: Apex Developer Guide - Bulk Design Patterns

D (Correct): DML operations (like insert) in a loop can cause the DML 151 limit error. Moving them outside the loop and collecting records in a list before performing a single DML operation is best practice. Reference:

Salesforce Platform Developer I Study Guide - Process Automation and Logic (30%)

NEW QUESTION # 144

A Visualforce page uses the Contact standard controller. How can a developer display the Name from the parent Account record on the page?

- A. Use SOQL syntax to find the related Accounts Name field.
- B. Use additional Apex logic within the controller to query for the Name field.
- C. Use an additional standard controller for Accounts.
- D. Use the `{!contact.Account.Name}` merge field syntax.

Answer: D

NEW QUESTION # 145

.....
