In the era of information, everything around us is changing all the time, so do the C_TS470_2412 exam. But you don't need to worry it. We take our candidates' future into consideration and pay attention to the development of our SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service study training dumps constantly. Free renewal is provided for you for one year after purchase, so the C_TS470_2412 latest questions won't be outdated. Among voluminous practice materials in this market, we highly recommend our C_TS470_2412 Study Tool for your reference. Their vantages are incomparable and can spare you from strained condition. On the contrary, they serve like stimulants and catalysts which can speed up you efficiency and improve your correction rate of the C_TS470_2412 real questions during your review progress.

SAP C_TS470_2412 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.

Topic 2	<ul style="list-style-type: none"> Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.
Topic 3	<ul style="list-style-type: none"> Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.
Topic 4	<ul style="list-style-type: none"> Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.

Valid C_TS470_2412 Practice Materials | New C_TS470_2412 Test Questions

Once installed C_TS470_2412 practice exam software onto your computer, you can get started as it does not require an internet connection to run. The C_TS470_2412 practice exam software is essential for your SAP C_TS470_2412 exam preparation as it gives you hands-on experience before the actual C_TS470_2412 Certification Exam. This kind of exam preparation ensures that a well-prepared and more confident candidate enters the examination arena.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which cancellation information can you maintain on service contract item level? Note: There are 2 correct answers to this question.

- A. Reason
- B. Cancelling party
- C. Latest end date
- D. Billing block

Answer: A,B

Explanation:

In SAP S/4HANA Service contracts (scope item 3MO), cancellation details at the item level include:

- * Cancelling party: Specifies who initiated the cancellation (e.g., customer or provider), maintained in the contract item data.
- * Reason: A cancellation reason (e.g., customer request) can be recorded for audit and reporting purposes.
- * Latest end date: Defined at the contract header or item validity level, not a cancellation-specific field.
- * Billing block: Applied to block billing but not a cancellation attribute. This is configured in the contract item settings. "Maintain cancelling party and reason at the service contract item level for cancellation tracking." (SAP Help Portal, Service Contract Management).

NEW QUESTION # 45

How are the inspection and maintenance operations determined, that must be performed regularly when you are using the scenario Service with Advanced Execution?

- A. Using a maintenance task list
- B. Using a bill of material
- C. Always manually

- D. Using a service order template

Answer: A

Explanation:

InService with Advanced Execution, recurring inspection and maintenance operations are systematically planned. The correct answer is using a maintenance task list (A). Let's dive in.

Advanced Execution Scenario:

This scenario enhances service processes with detailed execution, often using maintenance orders mapped to service orders.

Why Maintenance Task List?

A maintenance task list (e.g., IA05) defines standard operations (e.g., "Inspect bearings," "Replace oil") for recurring activities. In a maintenance plan (e.g., strategy plan), the task list is assigned, and its operations are triggered based on scheduling (e.g., every 6 months). These operations are then executed via service

/maintenance orders in the advanced execution framework, ensuring consistency and automation.

Why Not the Others?

- * Bill of material (B): BOMs list components, not operations.
- * Service order template (C): Templates structure orders, not recurring operations.
- * Manually (D): Advanced execution automates via task lists, not manual entry.

Example:

Task list "TL001" with operations "Check pressure" (6M) and "Replace filter" (12M) drives a strategy plan's calls.

"In Service with Advanced Execution, regular inspection and maintenance operations are determined using a maintenance task list."

NEW QUESTION # 46

What can you assign in a task list header? Note: There are 2 correct answers to this question.

- A. Production resources and tools
- B. Planner group
- C. Maintenance strategy
- D. Components

Answer: B,C

Explanation:

A task list in SAP S/4HANA Cloud Private Edition, Service defines standard maintenance or service procedures. The header contains general data applicable to the entire task list. The correct answers are planner group (B) and maintenance strategy (C). Let's explore this in detail.

Task List Header Overview:

The header (e.g., in transaction IA05/IA06) includes fields like task list type, group, and planning data, setting the context for all operations.

* Planner group (B): The planner group (e.g., "PLG1") is assigned in the header to indicate the team responsible for planning the task list's use (e.g., in maintenance plans). It's entered in the "Planner Group" field and links to organizational data (e.g., Plant Maintenance structure). For example, "PLG1" might be the North Region planners.

* Maintenance strategy (C): The maintenance strategy (e.g., "STR1") is assigned in the header for strategy-based task lists. It defines the packages (e.g., 3M, 6M) that operations will follow when the task list is used in a strategy plan. This is set in the "Strategy" field and ties the task list to scheduling logic.

Why Not the Others?

* Production resources and tools (A): PRTs (e.g., tools) are assigned to individual operations, not the header, in the operation details tab.

* Components (D): Components (e.g., spare parts) are also assigned at the operation level, not the header, via the components tab.

Practical Example:

Task list "TL001": Header assigns Planner Group "PLG1" and Strategy "STR1" (3M, 6M). Operations then specify tasks and resources.

Additional Insight:

The header data ensures consistency across all operations and integrates with maintenance plans for scheduling.

"In a task list header, you can assign a planner group and maintenance strategy to define planning and scheduling parameters."

NEW QUESTION # 47

What are examples of information contained in a maintenance item of a maintenance plan? Note: There are 3 correct answers to this question.

- A. Object list
- B. Service order type
- C. Call horizon
- D. Service interval
- E. Service contract item

Answer: A,C,D

Explanation:

A maintenance item in a maintenance plan specifies details about the maintenance activity. The correct answers are:

- * Call horizon (A): Defines the lead time (as a percentage or days) before the planned date when the call object is generated.
- * Object list (B): Lists the technical objects (e.g., equipment, functional locations) subject to maintenance.
- * Service interval (E): Specifies the frequency or cycle (e.g., every 6 months) for the maintenance activity.
- * Service order type (C): This is defined at the maintenance plan level or call object, not the maintenance item.
- * Service contract item (D): This relates to contracts, not maintenance items directly.

"A maintenance item includes information such as the call horizon, object list, and service interval to define the scope and timing of maintenance activities."

NEW QUESTION # 48

How are the actions that are proposed for an in-house repair item determined?

- A. They depend on the release status of the in-house repair.
- B. They depend on the process step overview profile of the repair order.
- C. They are defined per repair order item category.
- D. They are assigned to the life cycle user statuses of the repair objects.

Answer: D

Explanation:

In the in-house repair process, proposed actions (e.g., repair, replace, return) for a repair item are determined by the life cycle user statuses of the repair objects (Option C).

The repair object (e.g., equipment or material returned for repair) has a status profile defining its life cycle (e.g., Received, In Repair, Completed). User statuses within this profile trigger specific actions based on the current state, configured in customizing. For example, a status of "In Diagnosis" might propose "Perform Diagnosis."

- * A: Item categories influence billing or structure, not action proposals.
- * B: Release status affects the repair order, not individual action proposals.
- * D: The process step overview profile organizes steps, not action determination.

"Proposed actions for in-house repair items are assigned to the life cycle user statuses of the repair object, driving the process based on status transitions."

NEW QUESTION # 49

.....

Of course, we also need to realize that it is very difficult for a lot of people to pass the exam without valid C_TS470_2412 study materials in a short time, especially these people who have not enough time to prepare for the exam, that is why many people need to choose the best and most suitable C_TS470_2412 Study Materials as their study tool. We believe that if you have the good C_TS470_2412 study materials when you are preparing for the exam, it will be very useful and helpful for you to pass exam and gain the related certification successfully.
