## Sample Questions to Guide Your 1Z0-930 Studies

Here are example questions (not actual exam questions) to illustrate the exam's style:

1. Creating a new VM in OCI: What key parameters must be configured? (Consider compute shape, OS, networking, storage, etc.)
2. Implementing basic security: How would you secure your OCI VMs using Network Security Groups (NSGs)?
3. Troubleshooting performance issues: What OCI monitoring tools and metrics would you use to diagnose VM performance degradation?
4. Comparing OCI storage: Explain the differences between Block Volume, Object Storage, and Archive Storage. When is each type best suited?
5. OS management on running VMs: How do you manage OS updates on running VMs in OCI while minimizing downtime?

These examples highlight key study areas. Struggling with a particular question indicates the need for more focused study in that area.

## Consistency is Key to Success
