What does it mean to win a competition? Users of our Deep-Security-Professional actual exam can give you good answers. They have improved their strength and proved their strength. Now they have more opportunities and they have the right to choose. Of course, the effective learning methods they learned during the use of our Deep-Security-Professional Preparation materials also greatly enhanced their work. All of them had praised that our Deep-Security-Professional exam questions are the best choice they had made to buy. So what are you waiting for? Just rush to buy our Deep-Security-Professional practice guide!

Though there is an Deep-Security-Professional exam plan for you, but you still want to go out or travel without burden. You should take account of our PDF version of our Deep-Security-Professional learning materials which can be easily printed and convenient to bring with wherever you go. On one hand, the content of our Deep-Security-Professional Exam Dumps in PDF version is also the latest just as the other version. On the other hand, it is more convenient when you want to take notes on the point you have good opinion.

Newest PDF Deep-Security-Professional VCE Spend Your Little Time and Energy to Pass Deep-Security-Professional: Trend Micro Certified Professional for Deep Security exam

Trend Deep-Security-Professional Certification has great effect in this field and may affect your career even future. Trend Micro Certified Professional for Deep Security real questions files are professional and high passing rate so that users can pass the exam at the first attempt. High quality and pass rate make us famous and growing faster and faster.

To earn the Trend Deep-Security-Professional certification, candidates must pass a comprehensive exam that covers all aspects of Trend Micro's Deep Security solution. Deep-Security-Professional exam consists of multiple-choice questions and requires candidates to demonstrate their knowledge of virtualization and cloud computing security, as well as their ability to configure and troubleshoot Deep Security. Deep-Security-Professional Exam is designed to be challenging, and candidates are encouraged to

prepare thoroughly before taking it. Trend Micro offers a range of training courses and study materials to help candidates prepare for the exam.

Trend Micro Certified Professional for Deep Security Sample Questions (Q23-Q28):

NEW QUESTION # 23

Multiple Application Control Events are being displayed in Deep Security after a series of application updates and the administrator would like to reset Application Control. How can this be done?

- A. On the Deep Security Agent computer, type the following command to reset Application Control:
dsa_control -r
- B. Click "Clear All" on the Actions tab in the Deep Security Manager Web console to reset the list of Application Control events.
- C. Application Control can not be reset.
- D. Application Control can be reset by disabling the Protection Module, then enabling it once again. This will cause local rulesets to be rebuilt.

Answer: D

Explanation:

* To reset Application Control in Trend Micro Deep Security, the recommended and official method is to disable the Application Control module and then enable it again for the agent or computer.

* This process removes the existing application inventory and local rulesets, effectively resetting Application Control. When re-enabled, the module will rebuild its inventory and local rules from scratch.

* The documentation clearly states:

"If you want to reset Application Control on a computer, disable Application Control for that computer.

When you re-enable Application Control, it removes the inventory and local rules, then rebuilds them from scratch. This is useful after major application upgrades or if the rules become too complex."

* dsa_control -r is not an official reset method for Application Control, nor is there a "Clear All" option specifically for this purpose. Option D is incorrect as a reset is possible.

"To reset Application Control on an agent, disable and re-enable the Application Control module. This rebuilds the application inventory and resets local rulesets."

NEW QUESTION # 24

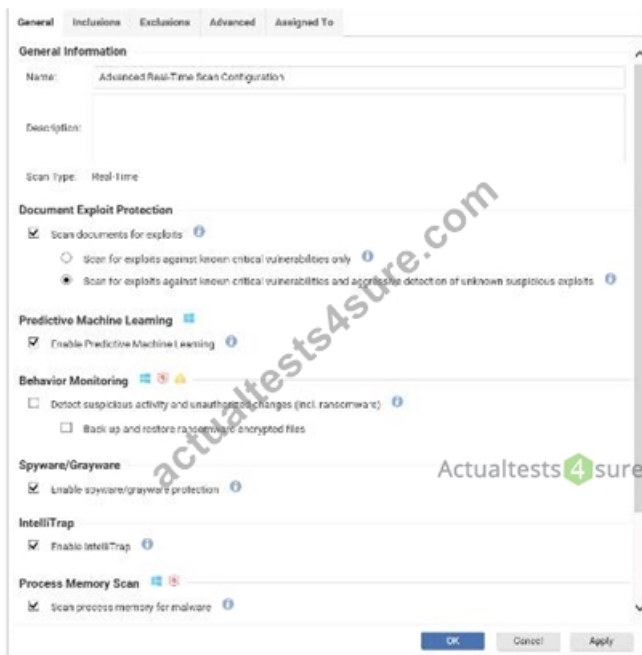

Which of the following statements is true regarding Maintenance Mode in the Application Control protection Module?

- A. When in Maintenance Mode, the Application Control Protection Module will continue to block software identified in Block rules, but will allow new and changed applications to be added to the software inventory.
- B. Maintenance Mode can be configured as a Scheduled Event. In this scenario, all software upgrades will be performed at the same time every day to avoid creating Alerts for normal software updates.
- C. When enabled, Maintenance Mode rescans the protected computer to rebuild the software inventory. Any new or changed software will be included in this rebuilt inventory.
- D. While in Maintenance Mode, all Block and Allow rules are ignored while new or updated applications are added to the software inventory.

Answer: A

NEW QUESTION # 25

Based on the Malware Scan Configuration displayed in the exhibit, which of the following statements is false.

- A. Internet access is required to properly enable the features identified in this configuration.
- B. Deep Security Agents will only be able to identify malware in files by using patterns downloaded from the Smart Protection Network.
- C. Any document files that display suspicious behavior will be submitted and executed in a sandbox environment on a Deep Discover Analyzer device.
- D. Deep Security Agents using this Malware Scan Configuration will not monitor for compromised Windows processes.

Answer: D

Explanation:

Configure Malware Scan

NEW QUESTION # 26

A Deep Security administrator wishes to monitor a Windows SQL Server database and be alerted of any critical events which may occur on that server. How can this be achieved using Deep Security?

- A. This can not be achieved using Deep Security. Instead, the administrator could set up log forwarding within Window SQL Server 2016 and the administrator could monitor the logs within the syslog device.
- B. The administrator could install a Deep Security Agent on the server hosting the Windows Server 2016 database and enable the Log Inspection Protection Module. A rule can be assigned to monitor the Windows SQL Server for any critical events, with Alerts enabled.
- C. The administrator could install a Deep Security Agent on the server hosting the Windows Server 2016 database and enable the Integrity Monitoring Protection Module. A rule can be assigned to monitor the Windows SQL Server for any modifications to the server, with Alerts enabled.
- D. The administrator could install a Deep Security Agent on the server hosting the Windows Server 2016 database and enable the Intrusion Prevention Protection Module. A Recommendation Scan can be run and any suggested rule can be assigned to monitor the Windows SQL Server for any vulnerabilities, with Alerts enabled.

Answer: B

NEW QUESTION # 27

Which of the following statements correctly identifies the purpose of the Integrity Monitoring Protection Module?

- A. The Integrity Monitoring Protection Module monitors critical operating system objects such as services, processes, registry keys and ports to detect and report malicious or unexpected changes.
- B. The Integrity Monitoring Protection Module monitors traffic to verify the integrity of incoming traffic to identify protocol deviations, packets fragments and other protocol anomalies.

- C. The Integrity Monitoring Protection Module monitors incoming traffic to confirm the integrity of header information including packet source and destination details.
- D. The Integrity Monitoring Protection Module monitors and analyzes the integrity of application logs to identify tampering, corruption and other suspicious modifications to the logs.

Answer: A

Explanation:

The Integrity Monitoring module is designed to watch over key OS objects-such as files, registry keys, processes, and ports-and detect/report unauthorized or unexpected changes for compliance and security auditing.
