

# Analytics-Admn-201 Exam Demo - Formal Analytics-Admn-201 Test

What's more, part of that NewPassLeader Analytics-Admn-201 dumps now are free: <https://drive.google.com/open?id=1Y6SmPNwYuj7MDYEp6n8uvIYAWgfB4J0F>

The web-based Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) practice exam is accessible from any major OS. These Salesforce Analytics-Admn-201 exam questions are browser-based, so there's no need to install anything on your computer. Chrome, IE, Firefox, and Opera all support this Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) web-based practice exam. You can take this Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) practice exam without plugins and software installation.

## Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Connecting to and Preparing Data:</b> This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Administration:</b> This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.</li> </ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Troubleshooting:</b> This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Installation and Configuration:</b> This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Migration &amp; Upgrade:</b> This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.</li> </ul>

## 2026 Salesforce Analytics-Admn-201: Salesforce Certified Tableau Server Administrator Fantastic Exam Demo

Our Analytics-Admn-201 study guide boosts both the high passing rate which is about 98%-100% and the high hit rate to have few difficulties to pass the test. Our Analytics-Admn-201 exam simulation is compiled based on the resources from the authorized experts' diligent working and the Real Analytics-Admn-201 Exam and confer to the past years' exam papers thus they are very practical. The content of the questions and answers of Analytics-Admn-201 exam quiz is refined and focuses on the most important information.

### Salesforce Certified Tableau Server Administrator Sample Questions (Q43-Q48):

#### NEW QUESTION # 43

A new engineer reports that he is unable to log on to Tableau Services Manager (TSM) from the initial node of a Windows test cluster. Which account credentials should you instruct the engineer to use?

- A. An account with a Creator site role
- B. An account for the Tableau Server administrator
- C. An account with a Site Administrator role
- **D. An account with administrative rights to the computer**

#### Answer: D

#### Explanation:

Tableau Services Manager (TSM) is the administrative tool for managing Tableau Server's configuration, processes, and topology. To log in to TSM (via the web UI at <https://<server>:8850> or CLI), you need:

- \* TSM administrator credentials: These are distinct from site roles and are set during installation or reset via tsm reset.
- \* Local administrative rights: On Windows, the account used to access TSM must be in the local Administrators group on the initial node, as TSM interacts with system-level services.

In a test cluster, the engineer's inability to log in suggests they lack either the correct TSM credentials or sufficient OS-level permissions. Since the question focuses on a Windows environment and "initial node," the most immediate requirement is local administrative rights to run TSM commands or access the UI.

\* Option C (An account with administrative rights to the computer): Correct. The engineer must use an account in the local Administrators group on the initial node to authenticate to TSM. After that, they'll need the TSM admin username/password set during installation.

\* Option A (An account with a Creator site role): Incorrect. Site roles (e.g., Creator) apply to content access within Tableau Server, not TSM administration.

\* Option B (An account with a Site Administrator role): Incorrect. Site Administrators manage site content, not server-level TSM

functions.

\* Option D (An account for the Tableau Server administrator): Partially correct but incomplete. This likely refers to the TSM admin account, but without local admin rights on the machine, login will fail.

Option C is more precise.

Reference: Tableau Server Documentation - "TSM Authentication" ([https://help.tableau.com/current/server/en-us/tsm\\_overview.htm#authentication](https://help.tableau.com/current/server/en-us/tsm_overview.htm#authentication)).

#### NEW QUESTION # 44

What should you do to configure the view URL and enable recording for a site that has recording workbook performance metrics enabled?

- **A. Type `record_performance=yes&` at the end of the view URL, immediately after the session ID**
- B. Type `record_performance=yes&` at the end of the view URL, immediately before the session ID
- C. Click the Performance link in the toolbar at the top of the view
- D. Delete the session ID in the URL and reload the view

**Answer: A**

Explanation:

Tableau Server can record performance metrics for workbooks to troubleshoot slow-loading views. This feature must be enabled at the site level (via Settings > General > Allow Performance Recording). Once enabled, you can trigger recording for a specific view by modifying its URL.

The correct syntax is to append `record_performance=yes&` to the view URL, immediately after the session ID. For example:

\* Original

URL: `http://server/##/site/my-site/views/workbook/view?.iid=1`

\* Modified

URL: `http://server/##/site/my-site/views/workbook/view?.iid=1.record_performance=yes`

&

After loading the view with this parameter, a performance recording is generated and accessible via the Performance option in the toolbar.

\* Option B (Type `record_performance=yes&` at the end of the view URL, immediately after the session ID): Correct. This follows Tableau's documented method for enabling performance recording.

\* Option A (Click the Performance link in the toolbar): Incorrect. The Performance link appears only after recording is triggered via the URL; it's not the method to enable it.

\* Option C (Type `record_performance=yes&` immediately before the session ID): Incorrect. The parameter must follow the session ID (e.g., `.iid=1`) to function correctly.

\* Option D (Delete the session ID in the URL and reload the view): Incorrect. The session ID is required for the view to load properly; removing it breaks the URL.

Reference: Tableau Server Documentation - "Record Performance of a View" ([https://help.tableau.com/current/server/en-us/perf\\_record.htm](https://help.tableau.com/current/server/en-us/perf_record.htm)).

#### NEW QUESTION # 45

What is the maximum number of tasks that a single Backgrounder process can execute simultaneously?

- **A. One**
- B. Two
- C. Unlimited (based on server resources)
- D. Three

**Answer: A**

Explanation:

The Backgrounder process in Tableau Server handles tasks like extract refreshes and subscriptions-let's explore its concurrency:

\* Backgrounder Behavior:

\* Each instance is single-threaded for task execution-one task at a time per Backgrounder.

\* Multiple Backgrounders (e.g., in multi-node setups) increase parallelism, but a single Backgrounder is limited to 1 concurrent task.

\* Queue: Additional tasks wait in the queue, prioritized by their priority (1-100).

\* Option A (One): Correct.

\* Details: A single Backgrounder executes one task (e.g., an extract refresh) until completion before starting the next.

\* Config: Add more Backgrounders via TSM (tsm topology set-process -n node1 -pr backgrounder -c 2) for more concurrency.

\* Option B (Two): Incorrect.

\* Why: Not natively supported-a single Backgrounder doesn't multi-thread tasks.

\* Option C (Three): Incorrect.

\* Why: Exceeds the single-threaded design.

\* Option D (Unlimited): Incorrect.

\* Why: Concurrency is fixed at 1 per instance-resources affect queue processing speed, not simultaneous tasks.

Why This Matters: Understanding Backgrounder limits guides scaling-more instances mean more parallel tasks, critical for heavy workloads.

Reference: Tableau Server Documentation - "Backgrounder Process" (<https://help.tableau.com/current/server/en-us/processes.htm#backgrounder>).

#### NEW QUESTION # 46

What should you do to ensure that server tasks associated with a particular schedule run one-at-a-time?

- A. Set Default priority to 0
- B. Set Frequency to Hourly
- C. Set Execution to Parallel
- **D. Set Execution to Serial**

**Answer: D**

Explanation:

In Tableau Server, schedules manage tasks such as extract refreshes and subscriptions. The execution mode of a schedule determines how tasks within that schedule are processed by the Backgrounder process:

\* Parallel: Tasks run simultaneously (up to the Backgrounder's capacity), which is the default setting.

\* Serial: Tasks run one-at-a-time in sequence, ensuring that one task completes before the next begins.

To ensure tasks associated with a particular schedule run one-at-a-time, you must configure the schedule's execution mode to Serial.

This is done in the Tableau Server web interface:

\* Go to Schedules.

\* Select the schedule, click Actions > Edit Schedule.

\* Under Execution, choose Serial instead of Parallel.

\* Option A (Set Execution to Serial): Correct. This directly addresses the requirement by forcing tasks to execute sequentially.

\* Option B (Set Default priority to 0): Incorrect. Priority (1-100) determines the order of task execution across all schedules, not whether tasks run one-at-a-time within a single schedule. Also, 0 is not a valid priority value (minimum is 1).

\* Option C (Set Frequency to Hourly): Incorrect. Frequency (e.g., hourly, daily) controls when the schedule runs, not how tasks within it are executed.

\* Option D (Set Execution to Parallel): Incorrect. Parallel execution allows tasks to run simultaneously, which contradicts the requirement.

Reference: Tableau Server Documentation - "Create or Modify a Schedule" ([https://help.tableau.com/current/server/en-us/schedule\\_manage\\_create.htm](https://help.tableau.com/current/server/en-us/schedule_manage_create.htm)).

#### NEW QUESTION # 47

What two Tableau Services Manager (TSM) processes continue to run when Tableau Server is stopped? (Choose two.)

- **A. Administration Controller**
- B. VizQL Server
- C. Backgrounder
- **D. License Manager**

**Answer: A,D**

Explanation:

Tableau Server consists of multiple processes managed by TSM. When you stop Tableau Server (e.g., via tsm stop), most application processes halt, but some TSM-specific processes remain active to manage the server's infrastructure. Let's examine each:

\* TSM Processes: These include the Administration Controller, Administration Agent, and License Manager, which handle

configuration, monitoring, and licensing.

\* Application Processes: These include VizQL Server, Backgrounder, Data Server, etc., which deliver Tableau's core functionality and stop when the server is stopped.

When tsm stop is executed:

\* The Administration Controller (port 8850) continues running to manage TSM operations (e.g., restarts, status checks).

\* The License Manager remains active to validate licenses and ensure compliance, even when the server is offline.

\* Application processes like VizQL Server and Backgrounder shut down, as they're tied to user-facing services.

\* Option B (License Manager): Correct. It persists to handle licensing tasks, ensuring the server can restart without license issues.

\* Option D (Administration Controller): Correct. It's the core TSM process, always running to accept commands and manage the server state.

\* Option A (VizQL Server): Incorrect. VizQL stops, as it renders visualizations for users-an application process tied to active server operation.

\* Option C (Backgrounder): Incorrect. Backgrounder stops, as it processes background tasks (e.g., extract refreshes), which halt when the server is down.

Why This Matters: Understanding which processes persist helps administrators troubleshoot and manage server lifecycle events effectively.

Reference: Tableau Server Documentation - "TSM Processes" ([https://help.tableau.com/current/server/en-us/tsm\\_overview.htm#processes](https://help.tableau.com/current/server/en-us/tsm_overview.htm#processes)).

## NEW QUESTION # 48

.....

Providing our customers with up to 1 year of free Salesforce Analytics-Admn-201 questions updates is also our offer. These Salesforce Analytics-Admn-201 free dumps updates will help you prepare according to the latest Analytics-Admn-201 test syllabus in case of changes. 24/7 customer support is available at NewPassLeader to assist users of the Analytics-Admn-201 Exam Questions through the journey. Above all, NewPassLeader also offers a full refund guarantee (terms and conditions apply) to our customers. Don't miss these amazing offers. Download Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) actual exam Dumps today!
