

Reliable EPIC EDI101 Exam Question, EDI101 Latest Test Bootcamp

Epic EDI101 Bridges Interfaces Exam Questions and Answers 2024

Does every HL7 message have to be encoded with the characters 1A-&? - answer✓✓No, the encoding characters can be any printable character.

Imagine that your message begins with MSH1A&1. How would you encode the string "The result is positive & has a value of 2.7 x 10A3."? - answer✓✓The result is positive \T\ has a value of 2.7 x 10\5\3.

Why is the NTE segment special? - answer✓✓Context; its meaning depends on the segment it follows

What is the difference between receiving an empty field |I and the delete sequence? - answer✓✓An empty field is ignored by the interface, whereas the delete character will delete information from the database, assuming the field in question supports the delete character.

Aside from HL7 Version 2, name two other standards supported in Bridges? - answer✓✓X12, FHIR, NCPDP, DICOM, and Direct.

What is Bridges? - answer✓✓Epic's interfacing messages along with the application. It consists of both the interface infrastructure to build, send, receive, and file messages along with the tools and utilities to maintain those interfaces

What are stored in the Event Queue, Data Queue, and Control Queue? - answer✓✓The Event Queue contains the information needed to build a message. Usually this is a patient ID, an encounter DAT, and the type of message to be built, amongst other information.

The Data Queue contains the text of HL7 messages and additional metadata.

The Control Queue is a to-do list of message numbers to send or file.

Are messages ever manually deleted from the Data Queue? - answer✓✓No, never. They are purged only by an automated purge job.

What are two ways that interface messages are sent and received? - answer✓✓TCP/IP with an interface engine is the most common communication method. Interconnect is used for HTTPS or other communication outside your local network.

One of the major features provided by EPIC is that it will provide you with free EPIC EDI101 actual questions updates for 365 days after the purchase of our product. If you work hard with our EPIC EDI101 Exam Practice material, nothing can stop you from cracking the test on the first endeavor.

In modern society, everything is changing so fast with the development of technology. If you do not renew your knowledge and skills, you will be wiped out by others. Our EDI101 guide materials also keep up with the society. After all, new technology has been applied in many fields. So accordingly our EDI101 Exam Questions are also applied with the latest technologies to be up to date. You can free download the demos to check that how wonderful our EDI101 learning preparation is!

EPIC CEE: Bridges Interfaces Application Essentials Exam (2026 Version)

Sample Questions (Q44-Q49):

NEW QUESTION # 44

Why does Epic strongly recommend or require Patient Validation on incoming interfaces?

- A. File data into the system faster
- **B. Ensure data files to the correct patient**
- C. Prevent the creation of duplicate patients
- D. Help maximize revenue

Answer: B

Explanation:

Patient Validation is a critical safety feature. Its primary purpose is to cross-reference multiple identifiers (like Name, DOB, and Sex) received in a message against the record found via the ID. If the ID points to "John Doe" but the message text says "Jane Smith," validation will fail and prevent clinical data from filing to the wrong patient record, which is a major patient safety risk.

NEW QUESTION # 45

Consider a new Epic master file ZAI, which holds records representing the intelligent robots working in a futuristic hospital. Each ZAI record has an item defining the type of robot. While the ZAI master file typically has thousands of robot records, there are only a dozen robot types. Which mapping method would be used to send ZAI record-level identifiers?

- **A. Identity**
- B. Translation Tables
- C. HL7 Processing ID
- D. Message Structure Override

Answer: A

NEW QUESTION # 46

Which of the following are possible reasons that an incoming message might show as "waiting" in your message search results? (SELECT ALL THAT APPLY)

- A. The communications daemon is not running.
- **B. The Filer Daemon is not running.**
- **C. The message is in the holding queue.**
- **D. There is a high volume of messages to file.**

Answer: B,C,D

Explanation:

A message shows as "waiting" when it has been received but not yet processed by the Filer. Common causes include:

- * High Volume: The Filer Daemon is working through a backlog.
- * Filer Daemon Stopped: If the Filer is not running, no messages can move from the queue to the database.
- * Holding Queue: The message is specifically waiting for a patient record lock to be released before it can file.
- * The Communications Daemon (Option D) is responsible for receiving the message; if it weren't running, the message wouldn't even be in the search results yet.

NEW QUESTION # 47

Assuming that your message starts with MSH|, which of the following strings would you need to escape a portion of? (SELECT ALL THAT APPLY)

- A. this procedure will be performed @ EMC family Medicine
- **B. they took ~10mg of this medication**
- C. copay: \$10.00
- **D. patient & their mother arrived at the ED**

Answer: B,D

Explanation:

HL7 uses specific characters as delimiters to separate data. Based on a standard MSH segment (MSH|
