NEW QUESTION # 74

Drag and Drop Question

Your company has a Microsoft Azure Active Directory (Azure AD) tenant. The company uses Microsoft Intune to manage iOS, Android, and Windows 10 devices.

The company plans to purchase 1,000 iOS devices. Each device will be assigned to a specific user.

You need to ensure that the new iOS devices are enrolled automatically in Intune when the assigned user signs in for the first time.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Step 1: Add a Device Enrollment (DEP) token.

Get an Apple Automated Device Enrollment token.

Before you can enroll iOS/iPadOS devices with ADE, you need an ADE token (.p7m) file from Apple. This token lets Intune sync information about ADE devices that your corporation owns. It also allows Intune to upload enrollment profiles to Apple and to assign devices to those profiles.

Step 2: Create an Apple enrollment profile.

You can create an enrollment profile for ADE devices. A device enrollment profile defines the settings applied to a group of devices during enrollment. There's a limit of 1,000 enrollment profiles per ADE token.

Step 3: Assign an enrollment profile

Assign an enrollment profile to devices.

Before devices can be enrolled, you need to assign an enrollment program profile to them.
