

# Expert-Verified Salesforce MuleSoft-Integration-Architect-I Exam Questions for Reliable Preparation

DOWNLOAD the newest TestPassKing MuleSoft-Integration-Architect-I PDF dumps from Cloud Storage for free:  
<https://drive.google.com/open?id=1c6-f1qzRqQhf2WDq9JKMlay7bBBknur>

If you attend Salesforce certification MuleSoft-Integration-Architect-I Exams, your choosing TestPassKing is to choose success! I wish you good luck.

TestPassKing's providing training material is very close to the content of the formal examination. Through our short-term special training You can quickly grasp IT professional knowledge, and then have a good preparation for your exam. We promise that we will do our best to help you pass the Salesforce Certification MuleSoft-Integration-Architect-I Exam.

## MuleSoft-Integration-Architect-I Exam Questions And Answers & Latest MuleSoft-Integration-Architect-I Guide Files

Our MuleSoft-Integration-Architect-I study materials are regarded as the most excellent practice materials by authority. Our company is dedicated to researching, manufacturing, selling and service of the MuleSoft-Integration-Architect-I study materials. Also, we have our own research center and experts team. So our products can quickly meet the new demands of customers. That is why our MuleSoft-Integration-Architect-I Study Materials are popular among candidates. We really take their requirements into account. Perhaps you know nothing about our MuleSoft-Integration-Architect-I study materials. Our free demo will help you know our study materials comprehensively.

## Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q139-Q144):

### NEW QUESTION # 139

When designing an upstream API and its implementation, the development team has been advised to not set timeouts when invoking downstream API. Because the downstream API has no SLA that can be relied upon.

This is the only downstream API dependency of that upstream API. Assume the downstream API runs uninterrupted without crashing. What is the impact of this advice?

- A. An SLA for the upstream API CANNOT be provided.
- B. A load-dependent timeout of less than 1000 ms will be applied by the Mule runtime in which the downstream API

implementation executes.

- C. The invocation of the downstream API will run to completion without timing out.
- D. A default timeout of 500 ms will automatically be applied by the Mule runtime in which the upstream API implementation executes.

**Answer: A**

Explanation:

An SLA for the upstream API CANNOT be provided.

#### NEW QUESTION # 140

An organization has defined a common object model in Java to mediate the communication between different Mule applications in a consistent way. A Mule application is being built to use this common object model to process responses from a SOAP API and a REST API and then write the processed results to an order management system.

The developers want Anypoint Studio to utilize these common objects to assist in creating mappings for various transformation steps in the Mule application.

What is the most idiomatic (used for its intended purpose) and performant way to utilize these common objects to map between the inbound and outbound systems in the Mule application?

- A. Use the Java module
- B. Use the WSS module
- C. Use the Transform Message component
- **D. Use JAXB (XML) and Jackson (JSON) data bindings**

**Answer: D**

Explanation:

Reference: <https://docs.mulesoft.com/mule-runtime/3.9/understanding-mule-configuration>

#### NEW QUESTION # 141

Organization wants to achieve high availability goal for Mule applications in customer hosted runtime plane.

Due to the complexity involved, data cannot be shared among of different instances of same Mule application.

What option best suits to this requirement considering high availability is very much critical to the organization?

- A. High availability can be achieved only in CloudHub
- B. The cluster can be configured
- C. Use persistent object store
- **D. Use third party product to implement load balancer**

**Answer: D**

Explanation:

High availability is about up-time of your application

A) High availability can be achieved only in CloudHub isn't correct statement. It can be achieved in customer hosted runtime planes as well B) An object store is a facility for storing objects in or across Mule applications. Mule runtime engine (Mule) uses object stores to persist data for eventual retrieval. It can be used for disaster recovery but not for High Availability. Using object store can't guarantee that all instances won't go down at once. So not an appropriate choice.

Reference: <https://docs.mulesoft.com/mule-runtime/4.3/mule-object-stores> C) High availability can be achieved by below two models for on-premise MuleSoft implementations.

1) Mule Clustering - Where multiple Mule servers are available within the same cluster environment and the routing of requests will be done by the load balancer. A cluster is a set of up to eight servers that act as a single deployment target and high-availability processing unit. Application instances in a cluster are aware of each other, share common information, and synchronize statuses. If one server fails, another server takes over processing applications. A cluster can run multiple applications. ( refer left half of the diagram) In given scenario, it's mentioned that 'data cannot be shared among of different instances'. So this is not a correct choice.

Reference: <https://docs.mulesoft.com/runtime-manager/cluster-about>

2) Load balanced standalone Mule instances - The high availability can be achieved even without cluster, with the usage of third party load balancer pointing requests to different Mule servers. This approach does not share or synchronize data between Mule runtimes. Also high availability achieved as load balanced algorithms can be implemented using external load balancer. ( refer right half of the diagram)

### NEW QUESTION # 142

As a part of project , existing java implementation is being migrated to Mulesoft. Business is very tight on the budget and wish to complete the project in most economical way possible.

Canonical object model using java is already a part of existing implementation. Same object model is required by mule application for a business use case. What is the best way to achieve this?

- A. Use Anypoint exchange
- B. Create similar model for Mule applications
- C. Create a custom application to read Java code and make it available for Mule application
- D. Make use of Java module

**Answer: D**

Explanation:

Mule 4 is built to:

- \* Minimize the need for custom code.
- \* Avoid the need for you to know or understand Java.

However, some advanced uses cases require integration with custom Java code, such as:

- \* Reuse of a library, such as a tax calculation library.
- \* Reuse of a canonical object model that is standard in the organization.
- \* Execution of custom logic using Java.

Mule ref doc : <https://docs.mulesoft.com/java-module/1.2/>

### NEW QUESTION # 143

How are the API implementation , API client, and API consumer combined to invoke and process an API ?

- A. The API consumer creates an API client which sends API invocations to an API such that they are processed by an API implementation
- B. The API client creates an API consumer which sends API invocations to an API such that they are processed by API implementation
- C. The API consumer creates an API implementation , which receives API invocations from an API such that they are processed for an API client
- D. An API client creates an API consumer, which receives API invocation from an API such that they are processed for an API implementation

**Answer: D**

Explanation:

The API consumer creates an API client which sends API invocations to an API such that they are processed by an API implementation This is based on below definitions API client \* An application component \* that accesses a service \* by invoking an API of that service - by definition of the term API over HTTP API consumer \* A business role, which is often assigned to an individual \* that develops API clients, i.e., performs the activities necessary for enabling an API client to invoke APIs API implementation \* An application component \* that implements the functionality

### NEW QUESTION # 144

.....

TestPassKing Salesforce MuleSoft-Integration-Architect-I exam questions are compiled according to the latest syllabus and the actual MuleSoft-Integration-Architect-I certification exam. We are also constantly upgrade our training materials so that you could get the best and the latest information for the first time. When you buy our MuleSoft-Integration-Architect-I Exam Training materials, you will get a year of free updates. At any time, you can extend the the update subscription time, so that you can have a longer time to prepare for the exam.

**MuleSoft-Integration-Architect-I Exam Questions And Answers:** <https://www.testpassking.com/MuleSoft-Integration-Architect-I-exam-testking-pass.html>

We offer three versions for every exam of MuleSoft-Integration-Architect-I practice questions which satisfy all kinds of demand, Staffs of MuleSoft-Integration-Architect-I exam guide materials will clear all your puzzles efficiently and nicely, Salesforce MuleSoft-

Integration-Architect-I Latest Practice Materials The certificate issued by official can inspire your enthusiasm, In doing so, they often need practice materials like our MuleSoft-Integration-Architect-I exam materials to conquer exam or tests in their profession, Participants in the Salesforce Certified MuleSoft Integration Architect I MuleSoft-Integration-Architect-I come from all over the world and receive the credentials for the Salesforce MuleSoft-Integration-Architect-I.

Humanized and easy to remember software and MuleSoft-Integration-Architect-I test engine for real exam, Here's how you can collect and test those touches at each stage of the interaction, We offer three versions for every exam of MuleSoft-Integration-Architect-I Practice Questions which satisfy all kinds of demand.

## Trustable MuleSoft-Integration-Architect-I Latest Practice Materials for Real Exam

Staffs of MuleSoft-Integration-Architect-I exam guide materials will clear all your puzzles efficiently and nicely, The certificate issued by official can inspire your enthusiasm, In doing so, they often need practice materials like our MuleSoft-Integration-Architect-I exam materials to conquer exam or tests in their profession.

Participants in the Salesforce Certified MuleSoft Integration Architect I MuleSoft-Integration-Architect-I come from all over the world and receive the credentials for the Salesforce MuleSoft-Integration-Architect-I.
