These offers by Real4Prep save your time and money. Buy CompTIA Linux+ Certification Exam (XK0-006) practice material today.

CompTIA Linux+ Certification Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63
Which of the following describes the method of consolidating system events to a single location?

- A. Log aggregation
- B. Threshold monitoring
- C. Webhooks
- D. Health checks

Answer: A

Explanation:
Log aggregation is the process of collecting and consolidating logs from multiple sources into a single location, making it easier to analyze and manage system events.

NEW QUESTION # 64
In the echo "profile-$num-$name"line of a shell script, the variable $numseems to not be expanding during execution. Which of the following notations ensures the value is expanded?

- A. echo "profile-'$num'-$name"
- B. echo "profile-${num}-$name"
- C. echo "profile-$(num)-$name"
- D. echo 'profile-$num-$name'

Answer: B

Explanation:
Using ${num} ensures correct variable expansion, especially when variables are adjacent to other characters or hyphens. This prevents ambiguity and guarantees $num is properly expanded within the string.

NEW QUESTION # 65
Which of the following commands should a Linux administrator use to determine the version of a kernel module?

- A. lsmod bluetooth
- B. depmod bluetooth
- C. modprobe bluetooth
- D. modinfo bluetooth

Answer: D

Explanation:
The modinfo command displays detailed information about a kernel module, including its version, author, description, and parameters.

NEW QUESTION # 66
An administrator has generated an RSA SSH key pair to log in to a remote server. After copying the public key and attempting to log in, the administrator sees the following message:
admin@192.168.10.50: Permission denied (publickey,password)
After seeing the message, the administrator attempts to connect using ssh -v admin@192.168.10.50 and notices the following debug output:
debug1: send_pubkey_test: no mutual signature algorithm
Which of the following actions should the administrator take first to remediate this issue?

- A. Create a new key pair by running ssh-keygen -t ecdsa.
- B. Update permissions on the /home/admin/.ssh directory to 700 on the remote server.
- C. Issue systemctl restart sshd on the local server.
- D. Set PermitRootLogin yes in the /etc/ssh/sshd_config file.

Answer: A

Explanation:
The "no mutual signature algorithm" error means the RSA/SHA-1 key type (ssh-rsa) isn't supported by both client and server.

Generating a new key with a modern algorithm (e.g., ssh- keygen -t ecdsa) ensures a mutually supported signature method.

NEW QUESTION # 67
A systems administrator is creating a backup copy of the /home/directory. Which of the following commands allows the administrator to archive and compress the directory at the same time?

- A. dd of=/backups/home.tar.xz if=/home/
- B. rsync -z /backups/home.tar.xz /home/
- C. cpio -o /backups/home.tar.xz /home/
- D. tar -cJf /backups/home.tar.xz /home/

Answer: D

Explanation:
The tar -cJf command creates (-c) an archive, compresses it with XZ (-J), and writes it to a file (- f). This allows archiving and compression of the /home/ directory in one step.

NEW QUESTION # 68

......

Our service tenet is to let the clients get the best user experiences and be satisfied. From the research, compiling, production to the sales, after-sale service, we try our best to provide the conveniences to the clients and make full use of our XK0-006 guide materials. We organize the expert team to compile the XK0-006 Practice Guide elaborately and constantly update them. To let the clients have a fundamental understanding of our XK0-006 training materials, we provide the free trials of our XK0-006 exam questions before their purchasing.
