You can access the Certified Technology Consultant - SAP S/4HANA System Administration (C-TADM-23) practice exam after installing this software on your Windows computer or laptop. Specifications we have discussed in the paragraph of the web-based version are available in desktop C-TADM-23 Practice Exam software.

## SAP Certified Technology Consultant - SAP S/4HANA System Administration Sample Questions (Q47-Q52):

### NEW QUESTION # 47

You are preparing an installation of an AS ABAP-based SAP system. You already downloaded all software that Maintenance Planner can calculate. What else must you download?

- A. SAP kernel
- B. SPAM/SAINT update
- C. SAP Host Agent
- D. Database software

**Answer: D**

#### NEW QUESTION # 48

At system start, what is the correct parameter evaluation sequence in an AS Java-based SAP system? (Note: the entries are sorted by read sequence).

- A. 1 Instance custom  
2 Instance default  
3. Template custom 4 Template default
- B. 1 Instance default  
2. Instance custom  
3. Template default  
4. Template custom
- C. 1. Template default  
2 Template custom  
3. Instance default  
4. Instance custom
- D. 1 Template custom  
2 Instance custom  
3 Template default  
4 Instance default

**Answer: C**

Explanation:

In an AS Java-based SAP system, parameters are used to configure system behavior. The correct sequence of parameter evaluation at system start is crucial for the system to adopt the desired configurations properly. The sequence is as follows:

\* B. 1. Template default, 2. Template custom, 3. Instance default, 4. Instance custom:

\* Template default: These are the out-of-the-box parameter values provided by SAP, serving as a baseline configuration for the system.

\* Template custom: Administrators can modify the default templates to create custom templates that better suit their organizational needs. Custom template parameters override the template default values.

\* Instance default: These parameters are specific to each instance of the SAP system and provide default values that are typically instance-specific.

\* Instance custom: These are customizations made to the instance parameters, overriding the instance default values to tailor the system's behavior to specific requirements of that instance.

This evaluation sequence ensures that customizations at the template and instance levels take precedence over the default settings, allowing for a high degree of flexibility and customization in configuring the SAP system's behavior to meet specific business needs.

#### NEW QUESTION # 49

You want to configure the TMS QA Approval procedure for an AS ABAP-based system landscape. Which approval steps can you choose? Note: There are 3 correct answers to this question.

- A. To be approved by request owner
- B. To be approved by department
