## 100% Pass Quiz 2026 AZ-700: Latest Latest Designing and Implementing Microsoft Azure Networking Solutions Cram Materials

In a knowledge-based job market, learning is your quickest pathway, your best investment. Knowledge is wealth. Modern society needs solid foundation, broad knowledge, and comprehensive quality of compound talents. It is our goal that you study for a short time but can study efficiently. At present, thousands of candidates have successfully passed the AZ-700 Exam with less time input. In fact, there is no point in wasting much time on invalid input. As old saying goes, all work and no play makes jack a dull boy. Our AZ-700 certification materials really deserve your choice. Contact us quickly. We are waiting for you.

Microsoft AZ-700 exam is a valuable certification for IT professionals who want to demonstrate their knowledge and skills in designing and implementing Microsoft Azure Networking Solutions. AZ-700 exam is designed to test your ability to design and implement networking solutions in Microsoft Azure, including virtual networks, load balancers, Azure Firewall, and Azure DNS. To prepare for AZ-700 Exam, you will need to have a strong understanding of Microsoft Azure Networking Solutions, as well as experience in designing and implementing networking solutions in Microsoft Azure.

## Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q35-Q40):

### NEW QUESTION # 35

You have a DNS domain named contoso.com that is hosted by a third party domain name registrar.

You have an Azure subscription.

You need to ensure that all DNS queries for the contoso.com domain are resolved by using Azure DNS.

What should you create in the registrar, and what should you create in Azure? To answer, drag the appropriate options to the

correct targets Each option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Options

- A delegation
- A DNS subdomain
- A forwarder
- A primary DNS zone
- A private DNS zone
- A public DNS zone
- A secondary DNS zone

Answer Area

Registrar:

Azure:

Microsoft

**Answer:**

**Explanation:**

Options

- A delegation
- A DNS subdomain
- A forwarder
- A primary DNS zone
- A private DNS zone
- A public DNS zone
- A secondary DNS zone

Answer Area

Registrar: A delegation

Azure: A public DNS zone

Microsoft

**Explanation:**

Options

- A delegation
- A DNS subdomain
- A forwarder
- A primary DNS zone
- A private DNS zone
- A public DNS zone
- A secondary DNS zone

Answer Area

Registrar: A delegation

Azure: A public DNS zone

Microsoft

### NEW QUESTION # 36

You are planning the IP addressing for the subnets in Azure virtual networks. Which type of resource requires IP addresses in the subnets?

- A. service endpoints
- B. virtual network peering
- C. private endpoints
- D. Azure Virtual Network NAT

**Answer: D**

### NEW QUESTION # 37

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
VNet1	Virtual network	Contains a subnet named Subnet1
Subnet1	Virtual subnet	Part of VNet1
NSG1	Network security group (NSG)	Linked to Subnet1
ASG1	Application security group	Not linked

Subshell contains Three virtual machines that host an app named App1. App1 is accessed by using the SFTP protocol. From NSG1, you configure an inbound security rule named Rule2 that allows inbound SFTP connections to ASG1. You need to ensure that the inbound SFTP connections are managed by using ASG1. The solution must minimize administrative effort.

What should you do?

- A. From NSG1, modify the priority of Rule2.
- **B. From each virtual machine, associate the network interface to ASG1**
- C. From ASG1, modify the role assignments.
- D. From Subnet1 create a subnet delegation.

**Answer: B**

### NEW QUESTION # 38

You have the resources shown in the following table.

Name	Description
Tenant1	Microsoft Entra tenant
Sub1	Azure subscription linked to Tenant1
Sub2	Azure subscription linked to Tenant1
Sub3	Azure subscription linked to Tenant1 Contains 20 virtual machines
MG1	Azure management group that contains Sub1 and Sub2

You need to protect the virtual machines by using Azure DDoS Network Protection plans.

What is the minimum number of DDoS Network Protection plans you should deploy?

- A. 0
- B. 1
- **C. 2**
- D. 3

**Answer: C**

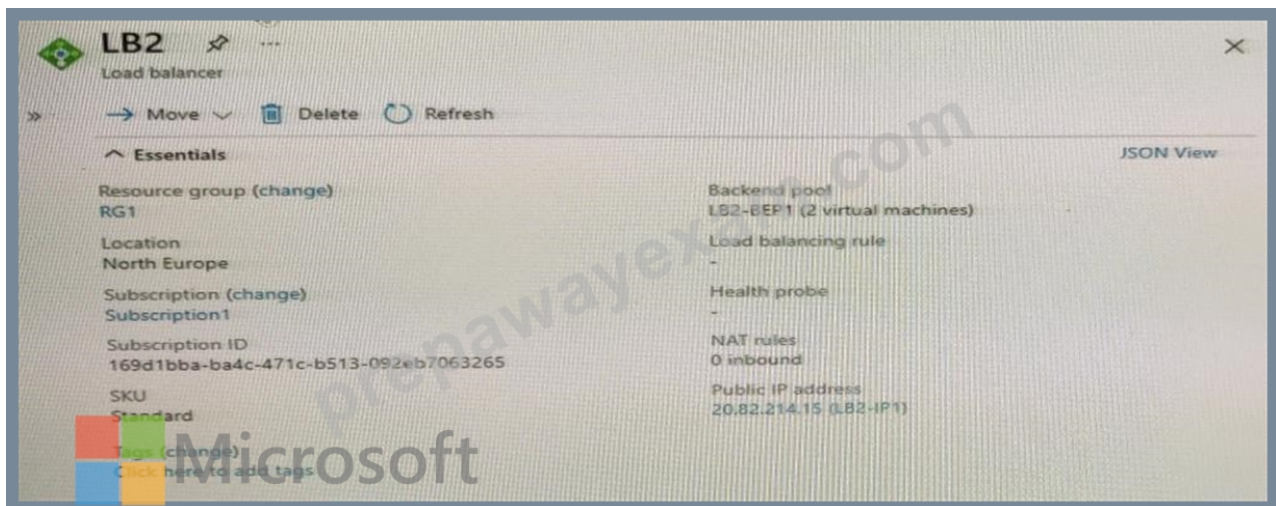

Explanation:

For DDoS Network Protection, under a tenant, a single DDoS protection plan can be used across multiple subscriptions, so there's no need to create more than one DDoS protection plan. For DDoS IP Protection, there's no need to create a DDoS protection plan. Customers can enable DDoS IP protection on any public IP resource.

### NEW QUESTION # 39

You have the Azure load balancer shown in the Load Balancer exhibit.

LB2 has the backend pools shown in the Backend Pools exhibit.

You need to ensure that LB2 distributes traffic to all the members of VMSS1.

What should you do?

- A. Add a public IP address to each member of VMSS1.
- **B. Add a load balancing rule.**
- C. Add a network interface to VMSS1.
- D. Configure a health probe.

**Answer: B**

## NEW QUESTION # 40

.....

With the development of technology, our AZ-700 training engine will be updated regularly. Actually, we never stop researching the new functions of the study materials. Normally, we will release our new version of the AZ-700 exam simulation on our website once it passed the tests. Many details will be perfected in the new version of our AZ-700 Study Materials not only on the content, but also on the displays. And we have been in this career for over ten years, our AZ-700 learning guide is perfect.
