Unparalleled Latest JN0-105 Exam Review - Easy and Guaranteed JN0-105 Exam Success

As a market leader, our company is able to attract quality staffs, it actively seeks out those who are energetic, persistent, and professional to various JN0-105 certificate and good communicator. And we strongly believe that the key of our company's success is its people, skills, knowledge and experience. Over 50% of the account executives and directors have been with the Group for more than ten years. The successful selection, development and JN0-105 training of personnel are critical to our company's ability to provide a high pass rate of JN0-105 exam questions for you to pass the JN0-105 exam.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q30-Q35):

NEW QUESTION # 30

What are two types of transit traffic that traverse the forwarding plane of a Layer 3 router? (Choose two.)

- A. exception traffic
- B. unicast traffic
- C. multicast traffic
- D. broadcast traffic

Answer: B,C

Explanation:

Transit traffic that traverses the forwarding plane of a Layer 3 router includes both unicast and multicast traffic types. Unicast traffic is directed from a single source to a single destination, while multicast traffic is sent from one source to multiple destinations that are part of a multicast group. These types of traffic are efficiently routed through the network by leveraging the router's forwarding plane capabilities. Exception traffic, which requires special handling by the control plane, and broadcast traffic, which is typically limited to a single broadcast domain and not usually forwarded by Layer 3 routers, are not considered standard types of transit traffic for the forwarding plane of a router.

NEW QUESTION # 31

You have completed the initial configuration of your new Junos device. You want to be able to load this configuration at a later time. Which action enables you to perform this task?

- A. Enter the request system reboot command.
- B. Enter the request system configuration rescue save command.
- C. Enter the request system zeroize command.
- D. Enter the load factory-default command.

Answer: B

Explanation:

In Junos OS, the request system configuration rescue save command is used to save the current active configuration as a rescue configuration. This feature is particularly useful for preserving a known good configuration state that can be quickly reverted to in case of configuration errors or issues. By saving a rescue configuration, administrators can ensure that they have a reliable fallback option that can be loaded in the future to restore the device's operation without having to reconfigure from scratch. This is an essential practice for maintaining network stability and quick recovery.

NEW QUESTION # 32

Which prompt indicates that you are using configuration mode?

- A. %
- B. >
- C. \$
- D. #

Answer: D

Explanation:

In Junos OS, the # prompt indicates that you are in configuration mode. This mode is used for making changes to the configuration of the device.

NEW QUESTION # 33

You are asked to configure your device running Junos OS to automatically archive your configuration upon commit. In this scenario, which two methods are supported by the Junos OS? (Choose two)

- A. FTP
- B. SCP
- C. HTTP
- D. RCP

Answer: B,D

Explanation:

Junos OS supports multiple methods for automatically archiving configurations upon commit. Two of the supported methods are SCP (Secure Copy Protocol) and RCP (Remote Copy Protocol). These methods can be configured to save the configuration files to a remote server automatically whenever a commit is made.

Reference: Juniper Networks Documentation on Configuration Archival

"You can configure Junos OS to automatically archive the configuration using protocols such as SCP and RCP upon commit."

NEW QUESTION # 34

You are logged in to a Junos OS device with SSH and issued the `show protocols | compare` command in the configuration, but no output is shown.

Which statement is correct in this scenario?

- A. Someone accidentally deleted the active configuration.
- **B. There are no changes to the candidate configuration.**
- C. You must commit the configuration before any output will be shown.
- D. The command only works for interface configuration differences.

Answer: B

Explanation:

If issuing the "show | compare" command in configuration mode yields no output, it indicates that there are no changes to the candidate configuration (B). This command is used to compare the current candidate configuration with the active configuration, and a lack of output suggests that the candidate configuration matches the active one, meaning no changes have been made or the changes have already been committed.

NEW QUESTION # 35

.....

The high quality and high efficiency of our JN0-105 exam materials has helped many people pass exams quickly. And we can proudly claim that if you study with our JN0-105 study questions for 20 to 30 hours, then you can confidently pass the exam for sure. After our worthy customers get a JN0-105 certificate, they now have more job opportunities. The current situation is very serious. Selecting JN0-105 training guide is your best decision.
