Reliable Salesforce-Data-Cloud Exam Cram | Salesforce-Data-Cloud Exam Dumps

In order to meet the demands of all the customers, we can promise that we will provide all customers with three different versions of

the Salesforce-Data-Cloud study materials: PDF version, Soft version and APP version. In addition, we can make sure that we are going to offer high quality Salesforce-Data-Cloud practice study materials with reasonable prices but various benefits for all customers. It is our sincere hope to help you pass Salesforce-Data-Cloud exam by the help of our Salesforce-Data-Cloud certification guide. Just come and buy our Salesforce-Data-Cloud learning prep!

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q107-Q112):

NEW QUESTION # 107

A customer has a calculated insight about lifetime value.

What does the consultant need to be aware of if the calculated insight needs to be modified?

- A. Existing measures can be removed.
- **B. New dimensions can be added.**
- C. Existing dimensions can be removed.
- D. New measures can be added.

Answer: B

Explanation:

A calculated insight is a multidimensional metric that is defined and calculated from data using SQL expressions. A calculated insight can include dimensions and measures. Dimensions are the fields that are used to group or filter the data, such as customer ID, product category, or region. Measures are the fields that are used to perform calculations or aggregations, such as revenue, quantity, or average order value. A calculated insight can be modified by editing the SQL expression or changing the data space. However, the consultant needs to be aware of the following limitations and considerations when modifying a calculated insight¹²:

Existing dimensions cannot be removed. If a dimension is removed from the SQL expression, the calculated insight will fail to run and display an error message. This is because the dimension is used to create the primary key for the calculated insight object, and removing it will cause a conflict with the existing data.

Therefore, the correct answer is B.

New dimensions can be added. If a dimension is added to the SQL expression, the calculated insight will run and create a new field for the dimension in the calculated insight object. However, the consultant should be careful not to add too many dimensions, as this can affect the performance and usability of the calculated insight.

Existing measures can be removed. If a measure is removed from the SQL expression, the calculated insight will run and delete the field for the measure from the calculated insight object. However, the consultant should be aware that removing a measure can affect the existing segments or activations that use the calculated insight.

New measures can be added. If a measure is added to the SQL expression, the calculated insight will run and create a new field for the measure in the calculated insight object. However, the consultant should be careful not to add too many measures, as this can affect the performance and usability of the calculated insight. NEW QUESTION # 108

Which two dependencies can prevent a Data Stream from being deleted?

- **A. A data stream attribute is used in Calculated Insight**
- B. A data stream attribute is used in Activation
- **C. A data stream attribute is mapped to a Data Model object**
- D. A data stream attribute is used in Segmentation

Answer: A,C

Explanation:

A data stream cannot be deleted if any of its attributes are mapped to a Data Model object or used in a Calculated Insight³. These dependencies need to be removed before deleting the data stream.

NEW QUESTION # 109

What are the two distinct phases of data model management in Data Cloud?

- A. Data Activation

- B. Data Ingestion
- C. Data Modeling
- D. Data Actions

Answer: B,C

Explanation:

Explanation

These two phases are distinct phases of data model management in Data Cloud. Data ingestion is the process of bringing data from different sources into Data Cloud using connectors or APIs. Data modeling is the process of mapping the ingested data to the Data Cloud canonical model or creating custom data model objects.

NEW QUESTION # 110

What is the correct formula to display the value of the raw data column of 'RetailPrice' plus an additional 5 percent?

- A. `sourceField['retailprice']*1.05`
- B. `SELECT(['retailprice']*1.05)`
- C. `sourceField['RetailPrice1']*1.05`
- D. `SELECT(['RetailPrice']*1.05)`

Answer: A

Explanation:

This is the correct formula to display the value of the raw data column of "RetailPrice" plus an additional 5 percent. The formula uses the sourceField function to access the raw data column, and then multiplies it by 1.05 to add 5 percent. The formula is case-sensitive, so the column name must match exactly with the raw data column name. Reference: [Formula Editor], [sourceField Function]

NEW QUESTION # 111

Which two statements about Data Cloud's Web and Mobile App connector are true?

- A. Data Cloud administrators can see the status of a Web or Mobile connector app on the app details page
- B. Any Data Streams associated with Web or Mobile connector app will be automatically deleted upon deleting the app from Data Cloud Setup
- C. Mobile and Web SDK schema can be updated to delete an existing field
- D. Tenant Specific Endpoint is auto-generated in Data Cloud when setting up a Mobile or Web app connection

Answer: A,D

Explanation:

The app details page shows the status of the app, such as active, inactive, or error. The tenant specific endpoint is a unique URL that is generated for each app and used to send data to Data Cloud from the web or mobile SDK.
