최신 Project+ PK0-005 무료샘플문제 (Q198-Q203):

질문 # 198

A project manager is in the process of evaluating the probability and impact of a risk by assigning numbers such as a monetary value. Which of the following is the project manager using?

- A. Quantitative risk analysis
- B. Risk response analysis
- C. Root cause analysis
- D. Monte Carlo simulation

정답: A

설명:

Quantitative risk analysis involves numerically analyzing the effect of identified risks on overall project objectives. It often includes assigning monetary values to risks to understand their impact in financial terms, helping in prioritizing risks based on their potential cost or impact on the project. This contrasts with qualitative risk analysis, which assesses risks based on their probability and impact but does not assign numerical values.

질문 # 199

Which of the following is a test that is done on an existing system to ensure the previous functionality still works after a change has been made?

- A. Unit testing
- B. Audits and inspections
- C. Performance testing
- D. User acceptance testing

정답: D

설명:

Comprehensive and Detailed Step-by-Step Explanation:User acceptance testing (UAT) is the final phase of the testing process where the client or end users validate that the software meets their needs. Since development and testing have already been completed, UAT is the next logical step before deployment.

질문 # 200

Which of the following is a reason to use a SOW on a project?

- A. To give explicit instruction on how to execute the work
- **B. To ensure the team stays within the scope of the contract**
- C. To find out the contact information for the vendors
- D. To review the list of stakeholders

정답: B

설명:

A statement of work (SOW) is a formal document that defines the entire scope of work involved for a vendor and clarifies deliverables, costs, and timeline¹. It serves as a contractual agreement between a vendor and a client, providing a comprehensive description of the work to be performed². A reason to use a SOW on a project is to ensure the team stays within the scope of the contract, as it outlines what the team will and won't do on a project, saving from painful client negotiations and protecting the timeline and the bottom line³. 질문 # 201

A project manager buys an extended warranty for a set of servers. Which of the following risk management strategies is the manager using?

- A. Accept
- B. Avoid
- C. Mitigate
- **D. Transfer**

정답: D

설명:

Transfer is a risk management strategy that involves shifting the responsibility or impact of a risk to a third party, such as an insurance company, a vendor, or a contractor¹. By buying an extended warranty for a set of servers, the project manager is transferring the risk of server failure or malfunction to the warranty provider, who will cover the cost of repair or replacement in case of a risk event. This way, the project manager reduces the exposure and liability of the project to the risk, while still retaining some level of accountability and oversight². 질문 # 202

A project team needs a tool to store information that is captured throughout the life cycle of a project. The information should be stored in a centralized location that is easily accessible to all stakeholders and will provide search functionality. Which of the following tools should be used?

- A. Secure folder
- B. Real-time, multiauthoring editing software
- C. Digital whiteboard
- **D. Wiki knowledge base**

정답: D

설명:

A wiki knowledge base is a tool that allows the project team to store, organize, and share information that is captured throughout the life cycle of a project. A wiki knowledge base is stored in a centralized location that is easily accessible to all stakeholders via a web browser. A wiki knowledge base also provides search functionality that enables the users to find the information they need quickly and easily. A wiki knowledge base can help the project team to document the project requirements, scope, schedule, budget, quality, risks, issues, lessons learned, and best practices.
