## Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q25-Q30):

### NEW QUESTION # 25

Which component of AnypointPlatform belongs to the platform control plane"?

- A. Anypoint Connectors
- B. Runtime Replica
- C. Runtime Fabric
- D. API Manager

**Answer: D**

Explanation:

In Anypoint Platform, the control plane is responsible for managing and controlling the various components and services that make

up the platform. API Manager is part of the control plane, providing centralized management of APIs. Here's a detailed explanation:

\* Control Plane:

\* Definition: The control plane in Anypoint Platform is responsible for the management, monitoring, and control of APIs, applications, and other platform resources.

\* Components: Includes tools for API management, analytics, security, and governance.

\* API Manager:

\* Purpose: Allows users to manage API policies, monitor API usage, and secure APIs. It provides a centralized interface for managing the entire lifecycle of APIs.

\* Features:

\* Policy Enforcement: Apply security policies, rate limiting, and other governance rules.

\* Analytics and Monitoring: Track API performance, usage statistics, and detect anomalies.

\* Access Control: Manage user access and permissions for APIs.

References

\* MuleSoft Documentation: API Manager

\* Anypoint Platform Overview: Anypoint Platform

### NEW QUESTION # 26

An integration team follows MuleSoft's recommended approach to full lifecycle API development. Which activity should this team perform during the API implementation phase?

- A. Design the API specification
- **B. Use the API specification to build the MuleSoft application**
- C. Use the API specification to monitor the MuleSoft application
- D. Validate the API specification

**Answer: B**

Explanation:

MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation, testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:

\* API Design:

\* Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.

\* API Implementation:

\* Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.

\* APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.

\* Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.

\* Validation and Monitoring:

\* Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.

\* Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.

References

\* MuleSoft Documentation: Full Lifecycle API Management

\* APIKit: Building APIs with APIKit

### NEW QUESTION # 27

An application load balancer routes requests to a RESTful web API secured by Anypoint Flex Gateway. Which protocol is involved in the communication between the load balancer and the Gateway?

- **A. HTTPS**
- B. LDAP
- C. SFTP
- D. SMTP

**Answer: A**

Explanation:

In scenarios where an application load balancer routes requests to a RESTful web API secured by Anypoint Flex Gateway, HTTPS is the protocol used. Here's a detailed explanation:

\* HTTPS Protocol:

\* Definition: HTTPS (HyperText Transfer Protocol Secure) is an extension of HTTP that provides secure communication over a computer network.

\* Encryption: It uses SSL/TLS to encrypt the data exchanged between the client and server, ensuring privacy and data integrity.

\* Load Balancer to Gateway Communication:

\* Secure Communication: The load balancer routes incoming requests to the API Gateway using HTTPS, ensuring that the data is encrypted and secure.

\* Standard Practice: HTTPS is the standard protocol for securing API communications, protecting against eavesdropping and man-in-the-middle attacks.

### NEW QUESTION # 28

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

According to MuleSoft's IT delivery and operating model which step should the organization take to solve this problem?

- A. Hire more IT developers, architects, and project managers to increase IT delivery
- **B. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business**
- C. Switch from a design-first to a code-first approach for IT development
- D. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record

**Answer: B**

Explanation:

MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation.

Here's a detailed explanation:

\* Decoupling Core IT Projects:

\* Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.

\* Benefits:

\* Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.

\* Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.

\* Implementation:

\* API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.

\* Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.

\* Outcome:

\* Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.

\* Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.

### NEW QUESTION # 29

During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

Which characteristics of a design-first approach will help make this API successful?

- A. Publishing the fully implemented API to Exchange so all developers can reuse the API
- **B. Developing a specification so consumers can test before the implementation is built**
- C. Building MUnit tests so administrators can confirm code coverage percentage during deployment
- D. Adding global policies to the API so all developers automatically secure the implementation before coding anything

**Answer: B**

Explanation:

A design-first approach emphasizes creating the API specification before implementation, ensuring better alignment with consumer needs and reducing the risk of project failure. Here's a detailed explanation:

\* API Specification:

\* Definition: An API specification is a detailed, formal description of the API's endpoints, request/response formats, and protocols.

\* Consumer Testing: Allows API consumers (developers) to understand, test, and provide feedback on the API design before actual development begins.

\* Advantages:

\* Early Feedback: Consumers can test the API design using mock services or tools like API Designer and provide feedback, ensuring the API meets their requirements.

\* Reduced Rework: Identifies potential issues and design flaws early, reducing costly changes during the implementation phase.

\* Documentation: Provides comprehensive documentation that aids in the development and future maintenance of the API.
