Real SOL-C01 Exam - Pass Guaranteed SOL-C01 - First-grade Snowflake Certified SnowPro Associate - Platform Certification Latest Version

Have you signed up for Snowflake SOL-C01 Exam? Will masses of reviewing materials and questions give you a headache? DumpsQuestion can help you to solve this problem. It is absolutely trustworthy website. Only if you choose to use exam dumps DumpsQuestion provides, you can absolutely pass your exam successfully. You spend lots of time on these reviewing materials you don't know whether it is useful to you, rather than experiencing the service DumpsQuestion provides for you. So, hurry to take action.

Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q211-Q216):

NEW QUESTION # 211
What is the SHOW FILE FORMATS SQL command used for in Snowflake?

- A. List all of the files in a database that have data in a given file format.
- B. List the file formats in the currently-selected schema.
- C. Get information about how different file formats should be used.
- D. Create a list of all of the file formats currently supported by Snowflake.

Answer: B

Explanation:
SHOW FILE FORMATS listsfile format objectsthat exist in the currently selected schema (or optionally, a specific database or schema). These objects define how Snowflake interprets staged files during data loading.
It doesnotlist supported built-in formats (CSV, Parquet, etc.).
It doesnotshow example usage information and doesnotlist files-LIST @stage handles that.

NEW QUESTION # 212

Consider the following Snowflake warehouse definition: 'CREATE OR REPLACE WAREHOUSE MY WAREHOUSE WITH WAREHOUSE SIZE = 'MEDIUM' WAREHOUSE TYPE = 'STANDARD' AUTO SUSPEND = 300 AUTO RESUME = TRUE MIN CLUSTER_COUNT = 1 MAX CLUSTER_COUNT = 3 SCALING_POLICY = 'ECONOMY;' Which of the following statements are TRUE regarding this warehouse? (Select all that apply)

- A. The warehouse will automatically suspend after 5 minutes of inactivity.
- B. The warehouse will always have at least one active cluster.
- C. The warehouse is optimized for minimizing costs rather than maximizing performance when scaling.
- D. The 'WAREHOUSE_TYPE = 'STANDARD'' setting is invalid and will cause an error.
- E. The warehouse can scale up to a maximum of three clusters to handle concurrent queries.

Answer: A,B,C,E

Explanation:
The warehouse will auto-suspend after 300 seconds (5 minutes) of inactivity (A). = 1 ` ensures at least one active cluster (B). = 3'
allows scaling to three clusters (C). 'SCALING_POLICY =
'ECONOMY'' prioritizes cost savings over immediate performance during scaling (D).
'WAREHOUSE_TYPE = 'STANDARD'` is a valid setting, it defines the warehouse as using the standard model for resource management.

NEW QUESTION # 213

You are tasked with loading data from a series of CSV files stored in an Amazon S3 bucket into Snowflake. The CSV files contain a header row, but some files have slight variations in the number and order of columns. You want to ensure that all relevant data is loaded correctly, even if the column order differs, and that any extra columns are ignored. Which of the following approaches is the MOST appropriate and efficient?

- A. Create a VIEW on top of the external table to ensure that column names are consistent across all files.
  Then load the data into view.
- B. Define a single external table with a VARIANT column and use Snowflake's CSV parsing capabilities to load all files into that column. Then, extract the relevant data using JSON path expressions.
- C. Create a separate external table for each CSV file with a different column structure.
- D. Create a single target table with all possible columns from all CSV files, using 'SKIP_HEADER = 1' and explicitly map the columns in the 'COPY INTO' statement to the correct columns in the target table, using the 'FILE FORMAT option to specify the correct field delimiter.
- E. Pre-process the CSV files to standardize the column order and names before loading them into Snowflake.

Answer: D

Explanation:
Creating a single target table with all possible columns and explicitly mapping the columns in the
'COPY INTO' statement is the most appropriate. This approach handles variations in column order by explicitly mapping columns from the CSV files to the target table. It is more performant than VARIANT, and doesn't require external preprocessing. Option A is not scalable and difficult to maintain. Option B is suitable for schema evolution but is not recommended if schemas are already known. Option D loading data into view, is not direct approach, and requires external table and COPY command need a table not view to load. Option E pre-processing helps if data consistency is high priority, but adds complexity to workflow and is not part of

Snowflake functionalities.

NEW QUESTION # 214

What does a red checkmark next to a cell in a Snowflake notebook signify?

- A. The cell has completed execution successfully
- B. The cell has errors
- C. The cell is currently running
- D. The cell is paused

Answer: B

Explanation:
A red checkmark in Snowflake Notebooks indicates that the cell encountered an error during execution. This visual indicator helps users quickly identify issues so they can inspect the error message and adjust code accordingly. Successful execution shows a green checkmark, while running cells show a spinner. Snowflake notebooks do not include a "paused" state for notebook cells.

NEW QUESTION # 215

In Snowflake Notebooks, you execute a cell containing a SQL query that retrieves data from a view based on multiple underlying tables.
The execution status shows 'Success', but the output displays stale data. You are certain that the underlying tables have been updated recently. Which of the following steps are MOST likely to resolve this issue?

- A. Check the definition of the view to ensure it is not using a 'SECURE VIEW' without proper privileges or a time travel point.
- B. Execute 'ALTER VIEW REBUILD to force a refresh of the view's metadata and data.
- C. Refresh the Snowflake Notebook session by disconnecting and reconnecting.
- D. Suspend and resume the Snowflake warehouse associated with the Notebook to clear any cached data.
- E. Drop and recreate the view to ensure it reflects the latest data from the underlying tables.

Answer: A,D

Explanation:
Stale data despite successful execution suggests caching or privilege issues. Suspending and resuming the warehouse (C) clears potential caches. Secure views (D) might require specific privileges if the user running the notebook lacks access to the underlying data at the time the view was created, or may be based on data at a specific time travel point. Refreshing the session (A) or rebuilding the view (E) may not always guarantee a refresh of cached results. Dropping and recreating a view (B) is a drastic measure and should be considered only if other options fail.

NEW QUESTION # 216

......

It is necessary to strictly plan the reasonable allocation of SOL-C01 test time in advance. Many students did not pay attention to the strict control of time during normal practice, which led to panic during the process of examination, and even some of them are not able to finish all the questions. If you purchased SOL-C01 learning dumps, each of your mock exams is timed automatically by the system. SOL-C01 learning dumps provide you with an exam environment that is exactly the same as the actual exam. It forces you to learn how to allocate exam time so that the best level can be achieved in the examination room.
