1/8

What's more, part of that PassTorrent 2V0-13.25 dumps now are free: <https://drive.google.com/open?id=1C99zk5fxjG3OzHxODIDL1nM7JP7jWXsg>

Our 2V0-13.25 vce braindumps are the best preparation materials for the certification exam and the guarantee of clearing exam quickly with less effort. You can find latest 2V0-13.25 test answers and questions in our pass guide and the detailed explanations will help you understand the content easier. Our experts check the updating of 2V0-13.25 free demo to ensure the accuracy of our dumps and create the pass guide based on the latest information.

## VMware 2V0-13.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Troubleshoot and Optimize the VMware Solution: This section of the exam measures the skills of Operations Engineers. There are no explicitly testable objectives provided in this domain, but candidates are expected to understand troubleshooting and optimization principles to maintain the VMware environment effectively in real-world deployments.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• Install, Configure, Administrate the VMware Solution: This section of the exam is relevant to System Administrators. Although it has no directly testable objectives, it underlines the expectation that candidates are familiar with installation, configuration, and administration tasks that form the foundation for VMware Cloud Foundation solutions.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• VMware Products and Solutions: This section of the exam evaluates the knowledge of VMware Solution Specialists and focuses on VMware Cloud Foundation (VCF). Candidates must be able to identify and differentiate between various VCF architecture options in given scenarios. The emphasis is on understanding the key products and how they integrate into enterprise design choices.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers the ability to distinguish business requirements from technical ones. It expects candidates to understand the differences between conceptual, logical, and physical designs while also differentiating requirements, assumptions, constraints, and risks. Core concepts of availability, manageability, performance, recoverability, and security (AMPRS) are tested. Learners also need to document risk mitigation strategies, design decisions, and create a validation strategy that ties requirements to practical implementation.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Plan and Design the VMware Solution: This section measures the skills of Cloud Infrastructure Designers. It focuses on gathering and analyzing business requirements and then transforming them into conceptual, logical, and physical models of VMware Cloud Foundation. Candidates are expected to identify prerequisites and make design decisions across fleet topologies, networking, management domains, workload domains, automation, and operations. The section also includes designing for availability within and across zones, creating strategies for manageability such as lifecycle, scalability, and capacity, and ensuring performance and recoverability through BCDR strategies. Additional emphasis is given to designing secure environments, workload migration strategies, and creating consumption, automation, and monitoring strategies to support modern applications and governance.</li> </ul>

## 2V0-13.25 Free Dumps & 2V0-13.25 Valid Exam Materials

It is understandable that different people have different preference in terms of 2V0-13.25 study guide. Taking this into consideration, and in order to cater to the different requirements of people from different countries in the international market, we have prepared three kinds of versions of our 2V0-13.25 Preparation questions in this website, namely, PDF version, online engine and software version, and you can choose any one of them as you like. No matter you buy any version of our 2V0-13.25 exam questions, you will get success on your exam!

## VMware Cloud Foundation 9.0 Architect Sample Questions (Q17-Q22):

### NEW QUESTION # 17

During the design workshop, the customer stated the following requirement:

\* The solution must comply with the organization's security standards.

Which two design decisions should be included in the logical design for the workload domain? (Choose two.)

- A. Enable VM Monitoring for each workload within the cluster.
- B. Enable Inter-SR iBGP routing.
- C. Use large-size NSX Edge virtual appliances to account for the additional firewall rules.
- D. Establish an operations practice to capture and update the thumbprint of the NSX Local Manager certificate on the NSX Global Manager every time the certificate is updated.
- E. Use an SHA-2 algorithm or higher when signing certificates.

**Answer: D,E**

Explanation:

\* SHA-2 or higher certificate signing ensures cryptographic compliance with modern security standards.

\* Maintaining updated certificate thumbprints is a crucial operational security task to prevent man-in-the-middle attacks between NSX managers.

These measures directly align with security hardening guidance outlined in the VCF design practices.  
Reference: VCF 9.0 Security Design Guide - Certificate Management and NSX Security Practices

### NEW QUESTION # 18

The following requirements were identified in an architecture workshop for a VMware Cloud Foundation (VCF) design project utilizing vSAN for its primary storage solution:

REQ001: Application must maintain a minimum of 1,000 transactions per second (TPS) during business hours excluding disaster recovery (DR) scenarios.

REQ002: Automatic DRS and HA must be utilized.

REQ003: Planned maintenance must be executed outside of business hours.

Which of the following test scenarios should be added and performed to validate these requirements?

- A. Trigger a vCenter Server update.
- **B. Trigger a failure of an ESXi host.**
- C. Trigger a vSAN disk group evacuation.
- D. Trigger a Virtual Machine vMotion operation.

### Answer: B

Explanation:

To validate the stated requirements, the test scenario must address all three: application performance (1,000 TPS), automatic DRS and HA functionality, and maintenance timing (implying minimal disruption during business hours). In a VCF environment with vSAN, test scenarios should simulate real-world conditions that challenge these requirements. Let's evaluate each option:

Option A: Trigger a Virtual Machine vMotion operation

vMotion tests DRS's ability to migrate VMs for load balancing, which aligns with REQ002's "automatic DRS" mandate. It can be scheduled outside business hours (REQ003) to minimize impact. However, it doesn't fully test HA (automatic failover) or ensure 1,000 TPS (REQ001) under failure conditions, as vMotion is a planned operation, not a failure scenario. This is a partial match but not comprehensive.

Option B: Trigger a vCenter Server update

Updating vCenter tests management plane resilience but doesn't directly validate application performance (REQ001), DRS/HA automation (REQ002), or vSAN-specific behavior. While it could relate to maintenance (REQ003), it's unrelated to workload or storage functionality in the VCF design, making it irrelevant here.

Option C: Trigger a vSAN disk group evacuation

Evacuating a vSAN disk group simulates maintenance (REQ003) by moving data to other nodes, testing vSAN's resilience. It may involve DRS for VM migration (REQ002), but it doesn't trigger HA failover. While it could indirectly affect TPS (REQ001), the requirement excludes DR scenarios, and this test doesn't guarantee performance validation during business hours under normal operations or host failure.

Option D: Trigger a failure of an ESXi host

Simulating an ESXi host failure directly tests REQ002: HA automatically restarts VMs on other hosts, and DRS balances the load post-failure. In a vSAN environment, it also validates data availability (vSAN rebuilds objects), ensuring 1,000 TPS (REQ001) is maintained during business hours under failure conditions (excluding DR, as this is a single-host failure within a site). While not a maintenance task (REQ003), it implicitly ensures maintenance-like disruptions (e.g., host failure) don't violate performance, aligning with VCF's HA/DRS automation goals. The VCF 5.2 Administration Guide recommends host failure testing to validate HA and vSAN resilience.

Conclusion:

Option D comprehensively validates REQ001 (TPS under failure), REQ002 (automatic DRS and HA), and indirectly supports REQ003 by ensuring business-hour performance during unplanned events, making it the best test scenario.

vSphere Availability Guide (docs.vmware.com): HA Failover Testing.

vSAN Administration Guide (docs.vmware.com): Disk Group Evacuation and Failure Scenarios.

### NEW QUESTION # 19

A financial services company is deploying a VMware Cloud Foundation (VCF)-based solution for its core banking applications. The architect needs to ensure that the design can handle peak transaction loads while maintaining the performance SLA.

Which two approaches should be included in the design validation strategy? (Choose two.)

- A. Rely on vendor-supplied performance benchmarks that were provided for the selected hardware and validate manually the Live Recovery configuration.

- B. Deploy the solution to production first and optimize based on live performance feedback from end users.
- C. Conduct stress testing using representative workloads to evaluate system behavior under extreme load conditions.
- D. Perform the live recovery test for the master recovery plan to ensure the Recovery Time Objective (RTO) is within the defined SLA.
- E. Simulate peak transaction loads in a staging environment to validate resource scalability and vSAN performance.

**Answer: C,E**

Explanation:

Per the VMware Cloud Foundation 9.0.2 Design and Validation Framework, performance validation must ensure the infrastructure can sustain peak workload loads while meeting defined SLAs. Two essential validation techniques recommended are:

\* Stress Testing - Used to evaluate system stability and response under extreme load conditions to ensure the infrastructure can handle transient peaks beyond average operations.

\* Load Simulation in a Staging Environment - Used to emulate production workloads and transaction patterns to validate scalability, vSAN throughput, and resource elasticity.

The documentation emphasizes that "stress and scalability testing must be conducted using representative workloads in a controlled environment before production cutover," ensuring predictable system behavior and compliance with SLA targets.

Other options such as recovery testing (A) or vendor benchmarks (E) serve disaster recovery and reference purposes, not performance validation. Deploying directly to production (D) without validation contradicts VCF design best practices.

#### **NEW QUESTION # 20**

Which Broadcom solutions can be used to optimize VMware storage performance?

- A. Broadcom Fibre Channel HBAs
- B. Broadcom NVMe SSDs
- C. Broadcom SATA HDDs
- D. Broadcom RAID Controllers

**Answer: A,B,D**

Explanation:

RAID controllers, NVMe SSDs, and Fibre Channel HBAs significantly enhance storage performance in VMware.

#### **NEW QUESTION # 21**

What Broadcom components are required to maintain VMware storage performance in a large-scale environment?

- A. 25GbE Ethernet Adapter
- B. Broadcom RAID Controller
- C. Broadcom NVMe SSD
- D. vSAN

**Answer: B,C,D**

Explanation:

Broadcom RAID Controllers, NVMe SSDs, and vSAN are essential to maintaining VMware storage performance at scale.

#### **NEW QUESTION # 22**

.....

We boost the expert team to specialize in the research and production of the 2V0-13.25 guide questions and professional personnel to be responsible for the update of the study materials. We keep a close watch at the change of the popular trend among the industry and the latest social views so as to keep pace with the times and provide the clients with the newest 2V0-13.25 Study Materials resources. And clients are our gods and the clients' satisfaction with our 2V0-13.25 guide material is the biggest resource of our happiness. So why you still hesitated? Go and buy our 2V0-13.25 guide questions now.
