- ISACA Certified Governance of Enterprise IT Certifications provide opportunities to get a job easily in which they are interested in instead of wasting years and ending without getting any experience.
- ISACA Certified Governance of Enterprise IT have the knowledge to use the tools to complete the task efficiently and cost-effectively than the other non-certified professionals lack in doing so.

ISACA Certified in the Governance of Enterprise IT Exam Sample Questions (Q260-Q265):

NEW QUESTION # 260
An enterprise is considering outsourcing non-core IT processes. Which of the following should be the FIRST step?

- A. Establish service-level metrics for outsourced activities.
- B. Conduct a cost-benefit analysis for outsourcing.
- C. Issue a formal request for proposal (RFP) to outsourcing vendors.
- D. Update resource allocation policies.

Answer: B

Explanation:
Outsourcing decisions require a clear understanding of the financial and operational implications. The CGEIT Review Manual 8th Edition advises that conducting a cost-benefit analysis is the first step to evaluate whether outsourcing non-core IT processes aligns with enterprise objectives.
* Extract from CGEIT Review Manual 8th Edition (Domain 5: Benefits Realization):"Before outsourcing IT processes, the enterprise should conduct a cost-benefit analysis to assess the financial, operational, and strategic implications. This analysis determines whether outsourcing delivers value and supports business objectives." (Approximate reference: Domain 5, Section on Outsourcing Decisions) Conducting a cost-benefit analysis for outsourcing (option D) provides the data needed to make an informed decision, comparing costs, risks, and benefits of outsourcing versus in-house management.
* Why not the other options?
* A. Update resource allocation policies: Policy updates follow the decision to outsource, based on the analysis.
* B. Issue a formal request for proposal (RFP) to outsourcing vendors: Issuing an RFP is premature without confirming that outsourcing is viable.
* C. Establish service-level metrics for outsourced activities: Metrics are defined after deciding to outsource and selecting a vendor.

NEW QUESTION # 261
Which of the following provides the MOST comprehensive insight into the effectiveness of IT?

- A. IT strategy
- B. IT balanced scorecard
- C. Return on investment (ROI)
- D. Key risk indicators (KRIs)

Answer: B

Explanation:
Explanation

NEW QUESTION # 262
Which of the following should be done FIRST when designing an IT balanced scorecard?

- A. Communicate to stakeholders
- B. Develop key performance indicators (KPIs).
- C. Review the IT resource plan.
- D. Analyze the business strategy.

Answer: D

Explanation:
An IT balanced scorecard (BSC) is a tool that helps align IT goals and performance with the business strategy and vision. The first step in designing an IT BSC is to analyze the business strategy and understand its objectives, priorities, and challenges. This will help identify the key stakeholders, customers, and value propositions of the IT function, as well as the critical success factors and risks that affect IT performance.

Analyzing the business strategy will also help define the scope and purpose of the IT BSC, and establish the linkages between the IT goals and the business goals. Analyzing the business strategy should be done before developing key performance indicators (KPIs), communicating to stakeholders, or reviewing the IT resource plan, as these steps depend on the clarity and alignment of the business strategy.

NEW QUESTION # 263
The MOST successful IT performance metrics are those that:

- A. measure financial results.
- B. are approved by the stakeholders.
- C. measure all areas.
- D. contain objective measures.

Answer: C

NEW QUESTION # 264
Which of the following BEST supports the implementation of an effective data classification policy?

- A. Clear guidelines adopted by the business
- B. Classification policy approval by the board
- C. Monitoring with key performance indicators (KPIs)
- D. Implementation of data loss prevention (DLP) tools

Answer: A

Explanation:
A data classification policy is a set of rules and standards that define how data is categorized and labeled according to its sensitivity, value, and criticality for the organization1. An effective data classification policy helps to ensure that data is properly protected, accessed, and managed throughout its lifecycle2. The best way to support the implementation of an effective data classification policy is to have clear guidelines adopted by the business, because they provide a common understanding and framework for data owners, stewards, and users to classify and handle data according to the business context and requirements3. Clear guidelines also help to ensure consistency, compliance, and accountability for data classification across the organization4.
