正解: A、B、E

質問 # 28

Which model can be used for ABAP cloud-native development?

- A. ABAP RESTful Application Programming Model
- B. The ABAP Cloud Development Model
- C. The SAP S/4HANA Cloud Extensibility Model

正解: A

解説:

In the context of ABAP cloud-native development, SAP has introduced modern programming models to support the development of cloud-ready applications that align with the principles of a clean core and extensibility. These models emphasize the use of standard APIs, separation of custom code from the core system, and adherence to cloud best practices. Let's analyze each option to determine the correct answer.

Explanation of Each Option:

B. ABAP RESTful Application Programming Model

* Correct : The ABAP RESTful Application Programming Model (RAP) is specifically designed for cloud-native development in SAP S/4HANA. It enables developers to build modern, scalable, and cloud-ready applications using standardized patterns and tools. RAP supports the creation of business objects with built-in capabilities for data modeling, behavior definition, and service exposure via OData APIs. This model aligns with SAP's clean core strategy by promoting the use of standard APIs and minimizing customizations in the core system.

* Reference : According to SAP documentation, the ABAP RESTful Application Programming Model is the recommended approach for cloud-native development in SAP S/4HANA, ensuring compliance with modern development practices and cloud principles.

A. The ABAP Cloud Development Model

* Incorrect : While "ABAP Cloud Development" is a broad term referring to development practices in the cloud, it is not a specific programming model. Instead, it encompasses various tools, frameworks, and methodologies, such as the ABAP RESTful Application Programming Model. This option is too generic and does not directly refer to a specific model for cloud-native development.

* Reference : The term "ABAP Cloud Development Model" is not explicitly defined in SAP documentation as a standalone programming model.

C. The SAP S/4HANA Cloud Extensibility Model

* Incorrect : The SAP S/4HANA Cloud Extensibility Model focuses on extending SAP S/4HANA Cloud functionality using tools like side-by-side extensions (via SAP Business Technology Platform) or in-app extensibility (e.g., custom fields, logic, and UIs).

While this model is critical for extending SAP S

/4HANA Cloud, it is not specifically designed for ABAP cloud-native development. Instead, it emphasizes extensibility rather than native application development.

* Reference : The SAP S/4HANA Cloud Extensibility Model is primarily about extending existing functionality, not building cloud-native applications using ABAP.

Key References to SAP Documentation:

* SAP Help Portal - ABAP RESTful Application Programming Model : Provides detailed guidance on using RAP for cloud-native development, including data modeling, behavior definition, and service exposure.

- * SAP S/4HANA Cloud Development Practices : Explains the principles of cloud-native development and the role of RAP in building modern applications.
- * SAP S/4HANA Cloud Extensibility Model : Describes how to extend SAP S/4HANA Cloud functionality using in-app and side-by-side extensibility options.
- * ABAP Cloud Development Overview : Highlights the tools and frameworks available for ABAP development in the cloud.
