Real Professional-Cloud-Developer Braindumps | Real Professional-Cloud-Developer Exam Dumps

You can invest safely spend your money to get Professional-Cloud-Developer exam preparation products with as we provide money back guarantee. If you won't pass the actual Professional-Cloud-Developer exam, after using the Actual4dump practice test or PDF questions and answers booklet useful for preparing the Professional-Cloud-Developer exam version, you can get the money back. We offer a free trial also, so that you can check the quality and working of Professional-Cloud-Developer Exam Practice test software. In case, you have prepared the Professional-Cloud-Developer exam with our products and did not pass the exam we will reimburse your money.

Target Audience and Prerequisites

The Google Professional Cloud Developer certification exam is intended for those App Developers who are involved in designing and building applications to run on Google Cloud Platform. These specialists should be familiar with the Google Cloud Platform products, such as Cloud Storage, Compute Engine, Security Key Enforcement, as well as BigQuery.

There are no obligatory requirements that the candidates need to meet to become eligible for the qualifying test. Nevertheless, the

target individuals are recommended to have three or more years of industry experience, including one or more years of experience in designing and managing solutions using Google Cloud. Besides that, the students need to develop a comprehensive understanding of the exam topics.

Google Certified Professional - Cloud Developer Sample Questions (Q246-Q251):

NEW QUESTION # 246

You are developing a microservice-based application that will run on Google Kubernetes Engine (GKE). Some of the services need to access different Google Cloud APIs. How should you set up authentication of these services in the cluster following Google-recommended best practices?

(Choose two.)

- A. Access the Google service account keys from a secret management service.
- B. Use the service account attached to the GKE node.
- C. Enable Workload Identity in the cluster via the `gcloud` command-line tool.
- D. Store the Google service account keys in a central secret management service.
- E. Use `gcloud` to bind the Kubernetes service account and the Google service account using `roles/iam.workloadIdentity`.

Answer: C,E

Explanation:

<https://cloud.google.com/kubernetes-engine/docs/how-to/workload-identity>

NEW QUESTION # 247

Your API backend is running on multiple cloud providers. You want to generate reports for the network latency of your API. Which two steps should you take? (Choose two.)

- A. Use Zipkin collector to gather data.
- B. Use Stackdriver Trace to generate reports.
- C. Use Stackdriver Profiler to generate report.
- D. Use Stackdriver Debugger to generate report.
- E. Use Fluentd agent to gather data.

Answer: A,B

Explanation:

Explanation

<https://cloud.google.com/trace/docs/zipkin>

"receive traces from Zipkin clients and forward those traces to Cloud Trace for analysis."

NEW QUESTION # 248

Please refer to the following information to answer the questions on the right.

Lucille has issues with her Apple device and takes it to an Apple Service Provider where Baron, a technician, assists her. Without much knowledge about the technical aspects of her device, Lucille vaguely describes the issues to Baron.

Which of the following skills would help Baron verify that he understood the issue that Lucille described?

- A. Reflecting
- B. Evaluating
- C. Imitating
- D. Listening

Answer: A

NEW QUESTION # 249

You are developing a web application that contains private images and videos stored in a Cloud Storage bucket. Your users are

anonymous and do not have Google Accounts. You want to use your application-specific logic to control access to the images and videos. How should you configure access?

- A. Cache each web application user's IP address to create a named IP table using Google Cloud Armor. Create a Google Cloud Armor security policy that allows users to access the backend bucket.
- B. Grant the Storage Object Viewer IAM role to allUsers. Allow users to access the bucket after authenticating through your web application.
- **C. Generate a signed URL that grants read access to the bucket. Allow users to access the URL after authenticating through your web application.**
- D. Configure Identity-Aware Proxy (IAP) to authenticate users into the web application. Allow users to access the bucket after authenticating through IAP.

Answer: C

Explanation:

<https://cloud.google.com/storage/docs/access-control/signed-urls#should-you-use> In some scenarios, you might not want to require your users to have a Google account in order to access Cloud Storage, but you still want to control access using your application-specific logic. The typical way to address this use case is to provide a signed URL to a user, which gives the user read, write, or delete access to that resource for a limited time. You specify an expiration time when you create the signed URL. Anyone who knows the URL can access the resource until the expiration time for the URL is reached or the key used to sign the URL is rotated.

NEW QUESTION # 250

Elizabeth would rather not answer phone calls using her iMac. Where in macOS can Elizabeth turn off iPhone Cellular Calls?

- A. Turn off iPhone Cellular Calls in iCloud preferences.
- **B. Turn off iPhone Cellular Calls in FaceTime preferences.**
- C. Turn off iPhone Cellular Calls in System Preferences.
- D. Turn off iPhone Cellular Calls in Messages preferences.

Answer: B
