Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q109-Q114):

NEW QUESTION # 109

Which actions are performed at the distribution layer of the three-layer hierarchical network design model?
(Choose two)

- A. Redundancy and load balancing
- B. Fast transport
- C. Fault isolation
- D. Reliability
- E. QoS classification and marking boundary

Answer: A,E

Explanation:

The distribution layer serves as the boundary between the access and core layers in the three-tier hierarchical design. It plays a crucial role in providing policy enforcement, control, and boundary functions, including:

* QoS classification and marking (C): The distribution layer serves as the boundary for Quality of Service policies. It marks and classifies traffic as it moves from access to core layers, ensuring proper QoS treatment in the core.

* Redundancy and load balancing (E): The distribution layer provides link redundancy (e.g., dual-homing access layer switches) and performs load balancing to optimize path selection toward the core.

Other options explained:

* A (Fast transport): Typically associated with the core layer, which focuses on high-speed forwarding.

* B (Reliability): While reliability is a network-wide goal, it's not a primary function of the distribution layer specifically.

* D (Fault isolation): While partial fault containment occurs, primary fault isolation happens at the access layer.

NEW QUESTION # 110

You are designing the QoS policy for a company that is running many TCP-based applications.

The company is experiencing tail drops for these applications. The company wants to use a congestion avoidance technique for these applications. Which QoS strategy can be used to fulfill the requirement?

- A. weighted fair queuing
- B. weighted random early detection
- C. low-latency queuing
- D. first-in first-out

Answer: B

NEW QUESTION # 111

Identity and access management between multiple users and multiple applications has become a mandatory requirement for Company XYZ to fight against ever increasing cybersecurity threats.

To achieve this, federated identity services have been deployed in the Company XYZ network to provide single sign-on and Multi-Factor Authentication for the applications and services. Which protocol can be used by Company XYZ to provide authentication and authorization services?

- A. OpenID
- B. SAML 2.0
- C. OpenID Connect
- D. OAuth2

Answer: B

NEW QUESTION # 112

A mega store plans to expand its business into the online world, and wants to operate using the highest possible security standards to prove to their customers that they take handling of their payment information seriously. Only TLS v1.3 will be allowed on their websites.

Which type of SSL certificate will emphasize their commitment to enforcing high security standards and minimize risk of spoofing?

- A. DV SSL certificate
- B. EV SSL certificate
- C. OV SSL certificate
- D. PV SSL certificate
