

100% Pass Quiz Newest Salesforce - Mule-Dev-202 - Salesforce Certified MuleSoft Hyperautomation Developer Well Prep

P.S. Free & New Mule-Dev-202 dumps are available on Google Drive shared by TestKingFree: <https://drive.google.com/open?id=19xEoQd6r52iaLWRetWjNsIA5CIOJECmd>

In order to meet the needs of all customers, our company employed a lot of leading experts and professors in the field. These experts and professors have designed our Mule-Dev-202 exam questions with a high quality for our customers. We can promise that our products will be suitable for all people. As long as you buy our Mule-Dev-202 practice materials and take it seriously consideration, we can promise that you will pass your exam and get your certification in a short time. So choose our Mule-Dev-202 exam questions to help you review, you will benefit a lot from our Mule-Dev-202 study guide.

Practice materials are typically seen as the tools of reviving, practicing and remembering necessary exam questions for the exam, spending much time on them you may improve the chance of winning. However, our Mule-Dev-202 training materials can offer better condition than traditional practice materials and can be used effectively. We treat it as our major responsibility to offer help so our Mule-Dev-202 Practice Guide can provide so much help, the most typical one is the efficiency of our Mule-Dev-202 exam questions, which can help you pass the Mule-Dev-202 exam only after studying for 20 to 30 hours.

>> **Mule-Dev-202 Well Prep** <<

Choosing The Mule-Dev-202 Well Prep Means that You Have Passed Salesforce Certified MuleSoft Hyperautomation Developer

If you are the first time to take part in the exam. We strongly advise you to buy our Mule-Dev-202 training materials. One of the most advantages is that our Mule-Dev-202 study braindumps are simulating the real exam environment. Many candidates usually feel nervous in the real exam. If you purchase our Mule-Dev-202 Guide questions, you do not need to worry about making mistakes when you take the real exam. In addition, you have plenty of time to practice on our Mule-Dev-202 exam prep.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q42-Q47):

NEW QUESTION # 42

Which MuleSoft deployment strategy consists of the control plane and runtime plan hosted by the client?

- A. Runtime Fabric
- **B. Hybrid**
- C. IPrivate Cloud Edition
- D. CloudHub

Answer: B

Explanation:

A hybrid deployment strategy in MuleSoft involves hosting the control plane (Anypoint Platform management and design tools) in the cloud, while the runtime plane (where Mule applications run) is hosted by the client, either on-premises or in their own private cloud: Hybrid Deployment:

The control plane is managed by MuleSoft and provides centralized management, monitoring, and deployment capabilities.

The runtime plane is hosted by the client, providing flexibility and control over where and how the Mule applications are executed, whether on-premises or in a private cloud environment.

Benefits:

This approach combines the advantages of cloud-based management with the control and customization available in on-premises or private cloud deployments, making it suitable for organizations with specific hosting and compliance requirements.

NEW QUESTION # 43

AnyAirlines is attempting to automate a process that triggers when a case is created in Salesforce but requires data to be extracted from a website without an API. It plans to automate the process using MuleSoft Composer and MuleSoft RPA.

During the design phase, it uses RPA Recorder to gather the steps required to interact with the website.

What will automatically be gathered by RPA Recorder when recording a manual activity?

- A. Comments on the purpose of the different steps carried out by the user
- **B. Documentation on the elements used by the user during the process**
- C. Variable information used by the user during the process
- D. Conditional decisions made by the user during the process

Answer: B

Explanation:

When using MuleSoft RPA Recorder to gather steps required for interacting with a website, it automatically collects documentation on the elements used by the user during the process.

MuleSoft RPA Recorder:

Automatic Element Documentation: The RPA Recorder captures all the elements (e.g., buttons, fields, and other UI components) that the user interacts with during the manual process recording.

Metadata Collection: It collects metadata such as element IDs, types, and positions, which are essential for accurately replicating the manual actions during automation.

Why Not Other Options:

Variable Information: While variable information is important, it is not the primary focus of the RPA Recorder. Variables can be defined post-recording.

Conditional Decisions: Conditional logic is typically added during the design phase of the RPA script, not during the initial recording.

Comments: User comments on the purpose of steps are not automatically recorded; this information needs to be added manually.

References:

For more detailed information on how MuleSoft RPA Recorder works, refer to MuleSoft's official RPA documentation

NEW QUESTION # 44

Any Airlines is developing a new integration and wants built-in automated testing.

Which tool must be used to satisfy this requirement?

- A. MuleSoft RPA
- B. MuleSoft Composer
- **C. Anypoint Platform**
- D. Flow Orchestration

Answer: C

Explanation:

To implement built-in automated testing for new integrations at Any Airlines, the Anypoint Platform is the appropriate tool.

Anypoint Platform Capabilities:

Automated Testing: Anypoint Platform includes various tools such as MUnit for automated testing of Mule applications. MUnit allows developers to create, design, and run tests natively within Anypoint Studio.

Test Automation Features: It supports comprehensive testing features including unit tests, integration tests, and mock services to

ensure robust and reliable integrations.

Continuous Integration and Deployment: Anypoint Platform can be integrated with CI/CD pipelines, allowing automated tests to run as part of the deployment process, ensuring that any new code changes do not break existing functionality.

Why Not Other Options:

MuleSoft RPA: Primarily used for automating repetitive manual tasks, not for testing integrations.

MuleSoft Composer: Focuses on low-code integrations and automation, not specifically designed for automated testing.

Flow Orchestration: While useful for process automation within Salesforce, it does not provide the testing capabilities required for MuleSoft integrations.

References:

For detailed information on automated testing with Anypoint Platform and MUnit, refer to the official MuleSoft documentation

NEW QUESTION # 45

An RPA process is invoked by a MuleSoft Composer flow. The RPA process has a User Task that can take up to 24 hours to complete.

- A. Create a second MuleSoft Composer flow that starts when the RPA process is complete.
- B. Wait for the RPA process to complete and invoke a second MuleSoft Composer flow via REST API.
- C. Wait for the RPA process to complete and use the results in the same MuleSoft Composer flow.
- D. Create a second MuleSoft Composer flow that runs on a schedule and checks if the RPA process is complete.
- E. Using best practices, how should the results be consumed by MuleSoft Composer?

Answer: A

Explanation:

When an RPA process involves a User Task that can take a significant amount of time (up to 24 hours) to complete, it is best to use a follow-up mechanism to handle the results once the process is finished:

Second MuleSoft Composer Flow:

Create a second MuleSoft Composer flow that is triggered when the RPA process completes. This ensures that the first flow is not held up while waiting for the long-running RPA process to finish.

The second flow can start based on an event, such as the completion status of the RPA process, ensuring timely and efficient processing of the results.

Trigger Mechanism:

Configure the RPA process to notify MuleSoft Composer when it is complete, possibly using a REST API or another integration method.

Best Practices:

This approach adheres to best practices by keeping flows modular and focused on specific tasks, making them easier to manage and troubleshoot.

NEW QUESTION # 46

Northern Trail Outfitters wants to create an automation which runs on a fixed schedule to enter sales data into NetSuite running as a process in the background. The business product owner chose MuleSoft Composer as the tool for this task.

The Salesforce admin wants to advise the product owner about how the MuleSoft Composer scheduling functionality works.

Which two options are available for use as the time mechanism within MuleSoft Composer? (Choose two.)

- A. Every 30 days
- B. Every 5 minutes
- C. Every 30 minutes
- D. Schedule based on a formula

Answer: B,C

Explanation:

MuleSoft Composer provides scheduling functionality that allows you to set up automated flows to run at specified intervals. The available options for scheduling within MuleSoft Composer include:

Every 30 minutes:

This option allows you to set up a flow to run every half hour, ensuring that your automation process is executed at regular intervals

throughout the day.

Every 5 minutes:

This option enables the flow to run at a higher frequency, executing the automation process every 5 minutes, which is useful for scenarios that require more frequent updates or processing.

These scheduling options ensure that you can automate tasks at the desired frequency without manual intervention.
