Candidates who participate in the Salesforce certification Mule-Dev-202 exam should select exam practice questions and answers of Test4Cram, because Test4Cram is the best choice for you.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q34-Q39):

NEW QUESTION # 34

Northern Trail Outfitters is building a hyperautomation solution using Salesforce and MuleSoft. They need to use Salesforce Flow to automate a multi-departmental process in an external system and capture the outcome in Salesforce.

How should the Salesforce Flow solution be structured to meet this requirement?

- A. Parent and subflows invoked by REST API to capture user inputs and update Salesforce records
- B. An evaluation flow which evaluates when the process is completed and updates Salesforce records
- **C. A Flow Orchestration to automate the multi-departmental process and update Salesforce records**
- D. An autolaunched flow invoked by REST API to update Salesforce after the process is completed

Answer: C

Explanation:

Salesforce Flow Orchestration is designed to manage complex, multi-step business processes that span multiple departments and systems. Here's how it can be structured to meet the requirement:

Automate Multi-Departmental Process:

Use Flow Orchestration to define and manage the steps involved in the multi-departmental process. It allows you to break down the process into stages and define the sequence of actions and approvals required.

Capture Outcome in Salesforce:

After completing the external process, Flow Orchestration can be configured to update Salesforce records with the outcome. This ensures that the results of the automated process are reflected within Salesforce.

Orchestration Capabilities:

Salesforce Flow Orchestration provides features such as task assignments, decision elements, and complex branching logic, which are ideal for managing multi-departmental workflows.

NEW QUESTION # 35

Northern Trail Outfitters wants to create an automation which runs on a fixed schedule to enter sales data into NetSuite running as a process in the background. The business product owner chose MuleSoft Composer as the tool for this task.

The Salesforce admin wants to advise the product owner about how the MuleSoft Composer scheduling functionality works.

Which two options are available for use as the time mechanism within MuleSoft Composer? (Choose two.)

- **A. Every 5 minutes**
- B. Schedule based on a formula
- C. Every 30 days
- **D. Every 30 minutes**

Answer: A,D

Explanation:

MuleSoft Composer provides scheduling functionality that allows you to set up automated flows to run at specified intervals. The available options for scheduling within MuleSoft Composer include:

Every 30 minutes:

This option allows you to set up a flow to run every half hour, ensuring that your automation process is executed at regular intervals throughout the day.

Every 5 minutes:

This option enables the flow to run at a higher frequency, executing the automation process every 5 minutes, which is useful for scenarios that require more frequent updates or processing.

These scheduling options ensure that you can automate tasks at the desired frequency without manual intervention.

NEW QUESTION # 36

Northern Trail Outfitters recently purchased another company. Both companies have separate Salesforce orgs.

One business user wants to automate a workflow which requires data transfer between both orgs and automates a distinct multi-user workflow within one of the orgs.

According to best practices, which two hyperautomation tools should these workflows use? (Choose two.)

- A. Flow Orchestration
- B. MuleSoft RPA
- C. Anypoint Platform
- D. MuleSoft Composer

Answer: A,D

Explanation:

To automate a workflow that requires data transfer between two Salesforce orgs and a distinct multi-user workflow within one of the orgs, the following tools are recommended:

MuleSoft Composer:

MuleSoft Composer allows for easy and quick integration between multiple systems, including different Salesforce orgs. It provides a no-code solution for connecting and syncing data across Salesforce instances.

Use MuleSoft Composer to create the integration flows that handle the data transfer between the two Salesforce orgs.

Flow Orchestration:

Salesforce Flow Orchestration is ideal for automating complex, multi-step business processes involving multiple users within a single org.

Use Flow Orchestration to design and automate the distinct multi-user workflow within one of the Salesforce orgs. It helps in coordinating user tasks, approvals, and other business processes seamlessly.

Combining these two tools leverages their strengths to handle both the integration and the complex workflow automation efficiently.

NEW QUESTION # 37

A MuleSoft developer at AnyAirlines wants to retrieve customer data from an external system.

Before designing a new integration, what should they use to determine if the integration exists and can be reused?

- A. Anypoint Studio
- B. Design Center
- C. MuleSoft Composer
- D. Anypoint Exchange

Answer: D

Explanation:

To determine if an integration exists and can be reused, the MuleSoft developer should use Anypoint Exchange:

Anypoint Exchange:

Anypoint Exchange is a repository where developers can publish, share, and discover reusable assets such as APIs, connectors, templates, and examples. It serves as a centralized location for all reusable components within the MuleSoft ecosystem.

By searching Anypoint Exchange, the developer can find existing integrations or assets that might fulfill the requirements for retrieving customer data, avoiding the need to design and develop a new integration from scratch.

Anypoint Exchange Documentation

NEW QUESTION # 38

The MuleSoft team at Northern Trail Outfitters wants to create a project skeleton that developers can use as a starting point when creating API implementations with Anypoint Studio. This will help drive consistent use of best practices within the team.

Which type of Anypoint Exchange artifact should be added to Exchange to publish the project skeleton?

- A. A custom asset with the default API implementation
- B. A MuleSoft application template with key components
- C. An example of an API implementation following best practices
- D. RAML trail definitions to be reused across API implementations

Answer: B

Explanation:

To create a project skeleton that developers can use as a starting point for API implementations with Anypoint Studio, the best

approach is to use a MuleSoft application template:

MuleSoft Application Template:

A MuleSoft application template includes key components and configurations that follow best practices. It provides a consistent starting point for new projects, ensuring that all developers adhere to the same standards.

Benefits:

Using a template helps enforce best practices, reduces the setup time for new projects, and ensures consistency across different implementations.

Publishing to Anypoint Exchange:

Once the template is created, it can be published to Anypoint Exchange where it is accessible to the entire development team.

Developers can then use this template to kickstart their API projects, ensuring a uniform approach across the organization.
